Matsushita
Programmable Controller FP-e

FP-e Series

The universal compact PLC

Do this, do that, do everything. **All in One!**

3-color Display

Simple characters and numerical values can be displayed. Simple messages as well as timer/counter settings and elapsed values can also be displayed.

Built-in operation switch

Setting values can be changed. The operation switch can also be used as an input.

Compact

Panel mountable, little space is taken up on the control panel. The size is only 48 x 48 x 70 mm (behind faceplate).

Matches FP0 intelligence (equivalent to FP0-C14)

Panel mounted type (in accordance with IP66, IEC standard)

To match panel design, a black faceplate is available.

Same programming tools used as with the FP Series

One programming software for all PLC types

Programming software and cables are common for all FP Series PLCs, so that any program created for the FP Series can be used by the FP-e as well. FPWIN Pro Ver.5 and FPWIN GR from Ver.2.3 offer a dialog to configure the screen display of the FP-e easily. You can check the result of the configuration directly with the display in the dialog.

FP-e Series

Optimised for a wide range of applications

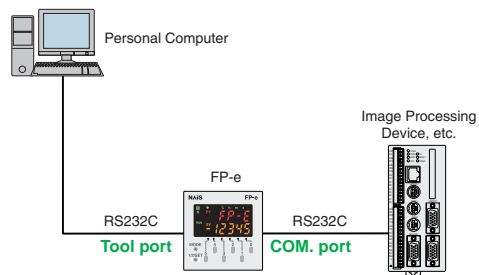

Equipped with RS485 and RS232C interfaces

- Up to 99 computer link stations are possible with RS485. (RS485 type)

Up to 32 computer link stations are possible using a C-NET adaptor and up to 99 are possible using a commercially available adaptor. You can easily monitor operation status or perform control.

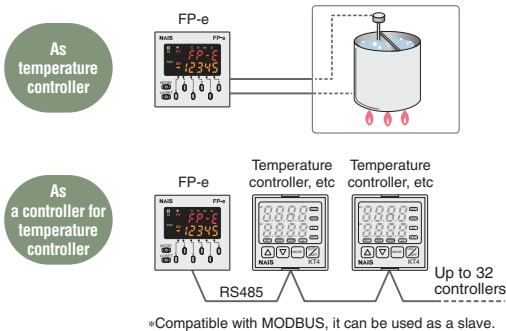

- With RS232C, communication with up to two ports is possible. (RS232C type)

Can even handle temperature control

- Two-point K-type thermocouple (-30 to 300°C) connection is possible. (equipped with thermocouple input)

Can be used in place of a temperature controller or used to control them.

- PID instruction function

High-performance temperature control can be achieved with PID instruction.

Equipped with high-speed counter for support of 2-axis independent positioning

- Pulse output function

The unit comes equipped with 2 channels for pulse output of up to 10 kHz pulses. Since these two channels can be separately controlled, the FP-e is also suitable for 2-axis independent positioning.

- High-speed counter function

In single phase, the 4-channel total is 10 kHz, and in 2-phase the 2-channel total is 2 kHz total speed, making the FP-e suitable for inverter control, etc.

(One half for the type with thermocouple input.)

Note 1) The proportion of timer points to counter points can be changed using a system register.

Note 2) Precision of calendar timer:
 - At 0°C/32°F, less than 200 seconds of error per month
 - At 25°C/77°F, less than 70 seconds of error per month
 - At 55°C/131°F, less than 240 seconds of error per month

 The RS232C driver IC for the COM. port conforms completely to EIA/TIA-232E and CCITT V.28 standards

Note 4) The max. counting speed (10 kHz) is the counting speed with a rated input voltage of 24 V DC and an ambient temperature of 25°C. The counting speed (frequency) will decrease depending on the voltage and temperature.

Note 5) If the unit is equipped with both reset inputs X0 and X1, X2 serves as the reset input for X1. If X3 and X4 are used, X5 serves as the reset input for X4.

Note 6) When the positioning control instruction "F168" is performed, the maximum output frequency is 9.5 kHz.

Note 7) The program, system registers and the hold type area (internal relay, data register, and timer/counter) are backed up by the built-in EEPROM.
 When a battery is replaced with a new one in the FP-e unit with a calendar timer function, settings can be changed without installing a battery. The data cannot be stored even when the settings are changed using the system register.

Note 8) F180 (SCR) and F181 (DSP) instructions are supported from Control FFWIN GR Ver. 2.2. and FFWIN Pro V 4.1.
