

CX-20 SERIES

Amplifier Built-in Compact Photoelectric Sensor

General Purpose Photoelectric Sensor with Full Basic Performance

Compact Size

Just 20mm in depth, 5mm shorter than a conventional model.

Two Sensors Mountable Together

CX-29 (retroreflective type), **CX-22** and **CX-24** (diffuse reflective type) incorporate an automatic interference prevention function. Hence, two sensors can be mounted close together.

(**CX-21**, **CX-23**, **CX-28** or **CX-28IR**) do not have this function.

Waterproof

The sensor can be hosed down because of its IP67 construction and the non-corrosive stainless steel mounting bracket.

Note: However, take care that if it is exposed to water splashes during operation, it may detect a water drop itself.

Strong Light Beam

CX-21 (thru-beam type) emits a strong light beam which can pass through 20 sheets of copier paper. The sensor incorporates an infrared LED that is strong against dust or dirt.

Insusceptible to Extraneous Light: CX-23

As the spread of the beam from the **CX-23** emitter is narrow, close mounting of sensors is possible.

Plug-in Connector Type Is Available

Plug-in connector type sensor, which can be easily disconnected for replacement, is available. In case a problem occurs anyone can replace the sensor in a minute.

APPLICATIONS

Detecting contents in paper pouch

Detecting shiny refrigerators

Detecting rubber sheet

Detecting pet bottles

Transparent objects detectable with CX-28IR□ (Typical examples)

Sensing object	Sensing object size
Glass sheet	□50mm t=1.0mm
Cylindrical glass	φ50mm ℓ=50mm t=2.0mm φ100mm ℓ=50mm t=2.3mm
Acrylic board	□50mm t=1.5mm
Styrol (Floppy case)	□50mm t=1.2mm
Food wrapping film	□50mm t=10 μm
Cigarette case film	□50mm t=20 μm
Vinyl sack	□50mm t=30 μm
Pet bottle	φ55mm φ70mm
Glass bin	φ65mm

Reflector setting range: 300 to 500mm
(with the RF-230 reflector at the optimum)
(condition (Note))

Each object should pass across the beam at the center between the sensor and the reflector.
ℓ: Length of cylindrical glasses
t: Thickness of sensing object

Note: The optimum condition is defined as the condition in which the sensitivity level is set such that the stability indicator just lights up when the object is absent.

ORDER GUIDE

Type	Appearance	Sensing range	Model No.	Sensing output	Emitting element
NPN output type	Thru-beam	10m	CX-21	NPN open-collector transistor	Infrared LED
		5m	CX-23		
	Retroreflective	0.1 to 3m (Note 1)	CX-29		Red LED
	For transar-With polarizing filters	50 to 1,000mm (Note 1)	CX-28IR		
Diffuse reflective	Long sensing range	800mm	CX-22	Infrared LED	
		300mm	CX-24		
PNP output type	Thru-beam	10m	CX-21-PN	PNP open-collector transistor	Infrared LED
		5m	CX-23-PN		
	Retroreflective	0.1 to 3m (Note 1)	CX-29-PN		Red LED
	For transar-With polarizing filters	50 to 1,000mm (Note 1)	CX-28IR-PN		
Diffuse reflective	Long sensing range	800mm	CX-22-PN	Infrared LED	
		300mm	CX-24-PN		

NOTE: Mounting bracket is not supplied with the sensor. Please select from the range of optional sensor mounting brackets (five types).

Note 1: The sensing range of the retroreflective type sensor is specified for the RF-230 reflector.

Further, the sensing range is the possible setting range for the reflector. The sensor can detect an object less than 0.1m away (CX-28IR□: 50mm).

CX-20

ORDER GUIDE

Red LED type for transparent object sensing

The red LED type for transparent object sensing, which features easy beam alignment, is available.
Model No.: **CX-28**, **CX-28-PN** (Sensing range: 50 to 500mm)

Plug-in connector type (Not available for the self-diagnosis output type)

Plug-in connector type is available. When ordering this type, add '-J' to the model No.
(e.g.) Plug-in connector type of **CX-21-PN** is '**CX-21-PN-J**'.
Plug-in connector type of **CX-29-Y** is '**CX-29-J-Y**'.

• Mating cable (2 Nos. are required for the thru-beam type.)

Type	Model No.	Description
Straight	CN-24E-C2	Length: 2m
	CN-24E-C5	Length: 5m
Elbow	CN-24EL-C2	Length: 2m
	CN-24EL-C5	Length: 5m

0.2mm² 4-core cabtyre cable with connector on one end
Cable outer diameter: $\phi 3.7\text{mm}$

• CN-24E-C2, CN-24E-C5

• CN-24EL-C2, CN-24EL-C5

Self-diagnosis output type (Available with NPN output type only. However, not available for **CX-23**, **CX-28**, **CX-28IR**, and plug-in connector type.)

The self-diagnosis output type is available. When ordering this type, add 'S' to the model No.
(e.g.) Self-diagnosis output type of **CX-21** is '**CX-21S**'.

Package without reflector

CX-29, **CX-28** and **CX-28IR** are available without the reflector **RF-230**. When ordering this type, add suffix '-Y' to the model No.
(e.g.) Package without reflector of **CX-29** is '**CX-29-Y**'.

OPTIONS

Designation	Model No.	Description
Round slit mask (For thru-beam type sensor only)	OS-CX-05 (Slit size $\phi 0.5\text{mm}$)	Slit on one side • Sensing range: 400mm [CX-21] 300mm [CX-23] • Min. sensing object: $\phi 12\text{mm}$
		Slit on both sides • Sensing range: 20mm [CX-21 , CX-23] • Min. sensing object: $\phi 0.5\text{mm}$
	OS-CX-1 (Slit size $\phi 1\text{mm}$)	Slit on one side • Sensing range: 900mm [CX-21] 600mm [CX-23] • Min. sensing object: $\phi 12\text{mm}$
		Slit on both sides • Sensing range: 100mm [CX-21 , CX-23] • Min. sensing object: $\phi 1\text{mm}$
	OS-CX-2 (Slit size $\phi 2\text{mm}$)	Slit on one side • Sensing range: 2m [CX-21] 1.5m [CX-23] • Min. sensing object: $\phi 12\text{mm}$
		Slit on both sides • Sensing range: 400mm [CX-21 , CX-23] • Min. sensing object: $\phi 2\text{mm}$
Rectangular slit mask (For thru-beam type sensor only)	OS-CX-05 × 6 (Slit size $0.5 \times 6\text{mm}$)	Slit on one side • Sensing range: 2m [CX-21] 1.2m [CX-23] • Min. sensing object: $\phi 12\text{mm}$
		Slit on both sides • Sensing range: 400mm [CX-21 , CX-23] • Min. sensing object: $0.5 \times 6\text{mm}$
	OS-CX-1 × 6 (Slit size $1 \times 6\text{mm}$)	Slit on one side • Sensing range: 3m [CX-21] 2m [CX-23] • Min. sensing object: $\phi 12\text{mm}$
		Slit on both sides • Sensing range: 1m [CX-21 , CX-23] • Min. sensing object: $1 \times 6\text{mm}$
	OS-CX-2 × 6 (Slit size $2 \times 6\text{mm}$)	Slit on one side • Sensing range: 5m [CX-21] 3m [CX-23] • Min. sensing object: $\phi 12\text{mm}$
		Slit on both sides • Sensing range: 2m [CX-21 , CX-23] • Min. sensing object: $2 \times 6\text{mm}$

Round slit mask

Fitted on the front face of the sensor with one-touch.

Rectangular slit mask

Fitted on the front face of the sensor with one-touch.

OPTIONS

Designation	Model No.	Description
Reflector (For retro-reflective type sensor only)	RF-210	<ul style="list-style-type: none"> Sensing range: 0.1 to 1m [CX-29□] 50 to 250mm [CX-28IR□] Min. sensing object: ϕ30mm
	RF-220	<ul style="list-style-type: none"> Sensing range: 0.1 to 1.5m [CX-29□] 50 to 500mm [CX-28IR□] Min. sensing object: ϕ35mm
Reflector mounting bracket	MS-RF21-1	Protective mounting bracket for RF-210 It protects the reflector from damage and maintains alignment.
	MS-RF22	For RF-220
	MS-RF23	For RF-230
Reflective tape (For CX-29□ only)	RF-11 (Note 1)	<ul style="list-style-type: none"> Ambient temperature: -25 to $+50^{\circ}\text{C}$ Ambient humidity: 35 to 85% RH Notes: i) Keep the tape free from stress. If it is pressed too much, its capability may deteriorate. ii) Do not cut the tape. It will deteriorate the sensing performance. <ul style="list-style-type: none"> Sensing range: 0.1 to 0.5m [CX-29□]
	RF-12	<ul style="list-style-type: none"> Sensing range: 0.1 to 0.7m [CX-29□] 0.15 to 0.4m [CX-28IR□]
Sensor mounting bracket (Note 2)	MS-CX2-1	Foot angled mounting bracket It can also be used for mounting RF-210 . (The thru-beam type sensor needs two brackets.)
	MS-CX2-2	Foot biangled mounting bracket Flat mounting saves height. It can also be used for mounting RF-210 . (The thru-beam type sensor needs two brackets.)
	MS-CX2-4	Protective mounting bracket It protects the sensor from damage and maintains alignment. (The thru-beam type sensor needs two brackets.)
	MS-CX2-5	Back biangled mounting bracket Suitable for sensing from bottom of conveyors, etc. (The thru-beam type sensor needs two brackets.)
	MS-CX-3	Back angled mounting bracket (The thru-beam type sensor needs two brackets.)
Universal sensor mounting stand	MS-AJ	Basic assembly
	MS-AJ-A	Lateral arm assembly
	MS-AJ-M	Assembly for reflector
Sensor checker	CHX-SC2	It is useful for beam alignment of thru-beam type sensors. The optimum receiver position is given by indicators, as well as, an audio signal.

Notes: 1) **RF-11** cannot be used with **CX-28IR□**.

2) The plug-in connector type sensor does not allow use of some sensor mounting brackets because of the protrusion of the connector.

Sensing field

Correlation between sensing object size and sensing range

As the sensing object size becomes smaller than the standard size (white non-glossy paper 200 × 200mm), the sensing range shortens, as shown in the left graph.

(For plotting the left graph, the sensitivity has been set such that a 200 × 200mm white non-glossy paper is just detectable at a distance of 800mm.)

CX-24 Diffuse reflective type

Sensing field

Correlation between sensing object size and sensing range

As the sensing object size becomes smaller than the standard size (white non-glossy paper 200 × 200mm), the sensing range shortens, as shown in the left graph.

(For plotting the left graph, the sensitivity has been set such that a 200 × 200mm white non-glossy paper is just detectable at a distance of 300mm.)

PRECAUTIONS FOR PROPER USE

This product is not a safety sensor. Its use is not intended or designed to protect life and prevent body injury or property damage from dangerous parts of machinery. It is a normal object detection sensor.

Mounting

- The tightening torque should be 0.5N·m or less.

Operation mode switch

Light-ON mode is obtained when the switch is turned fully counterclockwise.

Dark-ON mode is obtained when the switch is turned fully clockwise.

Others

- Do not use during the initial transient time (50ms) after the power supply is switched on.
- When connecting the mating cable to the plug-in connector type sensor, the tightening torque should be 0.4N·m or less.

CX-20

PRECAUTIONS FOR PROPER USE

Retroreflective type sensor with polarizing filters

- If a shiny object is covered or wrapped with a transparent film, such as those described below, the retroreflective type sensor with polarizing filters may not be able to detect it.

In that case, follow the steps given below.

Example of sensing objects

- Can wrapped by clear film
- Aluminum sheet covered by plastic film
- Gold or silver color (glossy) label or wrapping paper

Steps

- Tilt the sensor with respect to the sensing object while fitting.
- Reduce the sensitivity.
- Increase the distance between the sensor and the sensing object.

Self-diagnosis function (Self-diagnosis output type only)

- The sensor diagnoses the incident light intensity, and if it is reduced due to dirt or dust, or beam misalignment, an output is generated.

- ① The self-diagnosis output transistor stays in the 'OFF' state during stable sensing.
- ② When the sensing output changes, if the incident light intensity does not reach the stable light received level or the stable dark level, the self-diagnosis output becomes ON. Further, the self-diagnosis output changes state when the sensing output changes from Light to Dark state. (It is not affected by the operation mode switch.)
- ③ In case of insufficient beam interruption, there will be a time lag before the self-diagnosis output turns ON.

Retroreflective type sensor for sensing transparent objects

- Optimum sensing is possible when the position of the transparent sensing object is set at the center of the sensor and the reflector.

If the sensing position is set near the sensor or the reflector, the sensing may be unstable. In this case, set the sensing position at the center of the sensor and the reflector.

- When the sensor detects an uneven plastic receptacle or glass bin, the received light intensity may differ with the sensing position or direction. Adjust the sensitivity after confirming the stable sensing condition by turning the sensing object, etc.

- If the object is a transparent cylinder, feed it in a position as shown in Figure A. The sensor may fail to detect an object fed in a position as shown in Figure B.
