■ General precautions......P.1595

From ultra-thin lead frames to iron sheets... Double feed detection of various metal sheets

Double metal sheets detected

The high-end **GD** sensing technology detects double feeds of any metal sheet 0.01 mm 0.0004 in, or more, thick.

Easy sensitivity setting with actual samples

Optimum sensitivity setting is easy by using the teaching function with actual samples.

VARIETIES

Three types of sensor heads for various objects

Small object detection sensor head / GD-3

This is an extremely small sensor head, only $\emptyset 3.8 \times 15$ mm $\emptyset 0.150 \times 0.591$ in, suitable for detecting small components.

High precision sensor head / GD-10

It is suitable for high precision detection of double feeds of lead frames or thin metal sheets.

Long sensing range sensor head / GD-20

It achieves a long sensing range of 70 mm 2.756 in. Further, it employs a robust metal case with IP67G protection to withstand harsh environment.

APPLICATIONS

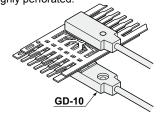

Detecting overlap of washers

GD-3 detects an overlap of small components such as washers.

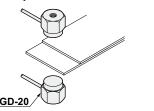

Detecting double feeds of lead frames

The high precision sensor head GD-10 does not miss double feeds of lead frames even if they are very thin and highly perforated.

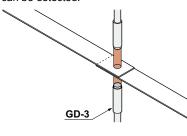

Detecting double feeds of sheet metal

The long sensing range sensor head GD-20 allows the object thickness to be as much as 10 mm 0.394 in. Hence, various objects can be detected.

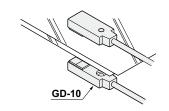

Detecting seam of hoop material

Even a minute difference in thickness can be detected.

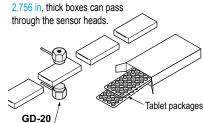

Detecting double feeds of aluminum foils GD-10 can detect double feeds of thin

aluminum foils which are several tens of micrometer thick.

Detecting missing tablet package in box

GD-20 can check if each box contains a given number of aluminum tablet packages. Since GD-20 has a sensing range of up to 70 mm

FUNCTIONS

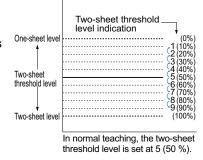

Seven LEDs indicate the sensing level

The optimum sensing point can be confirmed at a glance as seven LEDs indicate the sensing level.

Two-sheet threshold level shift function

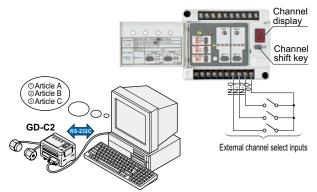

The two-sheet threshold level set by teaching can be shifted in nine steps to suit the detection conditions. This enables very stable detection.

Suitable for flexible manufacturing

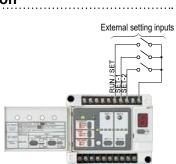

Since sensitivities of eight channels can be stored, product changeover is smooth and easy.

Select channel number by the "Channel shift key" on the operation panel or by using external channel select inputs. Further, since GD-C2 is equipped with RS-232C communication function, the sensitivity values can be stored in a personal computer, etc., and fed into the controller as per requirement.

External initialization

Teaching is possible by external devices, such as, PLC, etc. This enhances productivity by machine automation.

PRECAUTIONS FOR PROPER USE

Refer to p.1595 for general precautions.

· Never use this product as a sensing device for personnel protection.

· In case of using sensing devices for personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.

· Make sure to use the sensor heads and controllers in the specified combinations. If they are used in any other combination, the sensor heads may get damaged.

Mounting

Placing of sensor heads

 Make the sender and receiver face each other and align. their sensing center line.

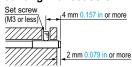

- Keep a distance from any magnet or a device generating magnetic field. It may degrade the detectability
- · Surrounding metal influences the detectability. Please contact our office for more details.
- · If more than one set of sensor heads are closely mounted, detectability may be affected. Please contact our office for more details.

Mounting sensor heads

<GD-3>

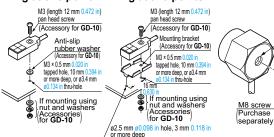

Mounting with set screw

• Use a set screw (M3 or less), and the tightening torque should be 0.12 N·m or less.

<GD-10> <GD-20>

Fixing at one point Fixing at two points

- The tightening torque should be 0.5 N·m or less.
- · To mount the sensor head with a nut, the thru-hole should be ø3.4 mm ø0.134 in.

The mounting board must be 2.3 mm 0.091 in, or less, thick.

Mounting of controller

<On DIN rail>

- ① With the stopper pressed in the direction of the arrow (it locks), fit the front portion of the mounting section of the amplifier on the 35 mm 1.378 in width DIN rail.
- 2 Press and fit the rear portion of the mounting section on the 35 mm 1.378 in width DIN rail.
 - * To remove, insert a "minus" screwdriver into the stopper and pull out.

Stopper "Minus" screwdriver Stopper

<On board with screws>

· Use two M4 pan head screws 10 mm 0.394 in, or more, long. The tightening torque should be 1.2 N·m or less.

Sensing mode

 The GD series has two sensing modes, one is the normal sensing mode and the other is the precise sensing mode. They are automatically selected by the characteristics of the object.

Iron etc.

Normal sensing mode: The GD series goes into this mode when the number of objects (e.g., large metal sheets) is distinguished with relative ease.

Precise sensing mode: The GD series goes into this mode when

M8 mounting

hole, 6 mm

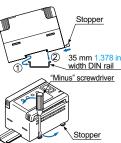

The tightening

torque should be 11.2 N·m or less.

.236 in deep

the number of objects (e.g., lead frames) is difficult to distinguish. In this mode, the sensitivity difference is so minute between two sensing levels that vibration and temperature changes must be carefully managed.

• The sensing mode indicator lights up green during the normal sensing mode, but lights up yellow during the precise sensing mode.

PRECAUTIONS FOR PROPER USE

Refer to p.1595 for general precautions.

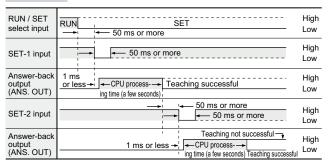

Receiver

Sensitivity setting

Teaching by external input

 The teaching can also be performed by external input signals.

Time chart

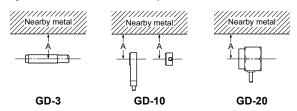

Distance from nearby metals

· As metals near the sensor head may affect the sensing performance, pay attention to the following points.

Influence of nearby metal

 The sensor head must be separated from nearby metal by a minimum distance as specified in the table below.

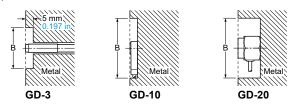

Dimension A (in case of iron)

Setting distance Model No.	5 mm 0.197 in	10 mm 0.394 in	30 mm 1.181 in	70 mm 2.756 in
GD-3	15 mm 0.591 in	20 mm 0.787 in		
GD-10	1			
GD-20				

Embedding in metal

 The sensing performance may be affected if the sensor is completely embedded in a metal. Keep a minimum clearance between the sensor head and the metal as specified in the table below.

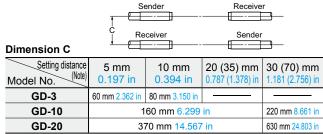

Dimension B (in case of iron)

		•		
Setting distance Model No.	5 mm 0.197 in	10 mm 0.394 in	30 mm 1.181 in	70 mm 2.756 in
GD-3	ø15 mm ø0.591 in	ø20 mm ø0.787 in		
GD-10	ø1			
GD-20				

Interference prevention

• When two or more sensor heads are mounted in parallel. keep a minimum separation distance as specified below to avoid interference.

In case the sender and another sensor's receiver are placed adjacently

Note: The value in the brackets is for GD-20.

In case the respective senders and receivers are placed adjacently Sender

Dimension D	D Sender		Receiver		
Setting distance Model No. (Note)	5 mm 0.197 in	10 mm 0.394 in	20 (35) mm 0.787 (1.378) in	30 (70) mm 1.181 (2.756) in	
GD-3	30 mm 1.181 in	50 mm 1.969 in			
GD-10	200 mm 7.874 in			250 mm 9.843 in	
GD-20	4:	50 mm 17.717	' in	700 mm 27.559 in	

Note: The value in the brackets is for GD-20.

RS-232C data transmission (GD-C2 only)

· GD-C2 can feed in the set level data into a PC or PLC memory using RS-232C serial communication and retrieve it whenever required.

In this case, the taught data should be stored in the prescribed channel.

Transmission specifications

 Baud rate: Selectable from 300, 600, 1,200, 2,400, 4,800, 9,600, 19,200, or 31,250 bits/sec.

• Format: Data bits 7 bits or 8 bits Parity checkNone or Enable, Even or Odd ... 1 bit or 2 bits Stop bits ... Terminal code CR or ETX

Self-diagnosis (Alarm) function

• The GD series constantly runs self-diagnosis, outputs the result with self-diagnosis output, and lights the selfdiagnosis indicator. In addition, error content is shown on the channel display using error codes.

Others

- Do not operate the sensor for a few seconds immediately after supplying power because of transient conditions including self-diagnosis time.
- · Make sure to check the ability of the sensor to detect the number of sheets of your actual objects before use. If real objects differ from teaching samples in size or in characteristics, or the detecting condition deviates, an error may occur. Please note that magnetic metals or metals with low magnetic permeability such as steel especially have a strong tendency.
- · In situations when magnets are in close proximity such as during electromagnet conveyance, this causes malfunctions due to electromagnetic disorder.
- When conducting minute detections, favorable sensing conditions are obtained only after having elapsed 60 min. after the initial introduction of the power supply.
