

Safety Precautions

- Important Notes on exporting this product or equipment containing this product;
If the end-user or application of this product is related to military affairs or weapons, its export may be controlled by "Foreign Exchange and Foreign Trade Control Law" of Japan where export license will be required before product can be exported from Japan.
- This product is designed and manufactured for use in General Purpose Industrial Equipment and it is not intended to be used in equipment or system that may cause personal injury or death.
- All servicing such as installation, wiring, operation, maintenance and etc., should be performed by qualified personnel only.
- Tighten mounting screws with an adequate torque by taking into consideration strength of the screws and the characteristics of material to which the product will be mounted. Over tightening can damage the screw and/or material; under tightening can result in loosening.
- Install safety equipment to prevent serious accidents or loss that is expected in case of failure of this product.
- Consult us before using this product under such special conditions and environments as nuclear energy control, aerospace, transportation, medical equipment, various safety equipments or equipments which require a lesser air contamination.
- We have been making the best effort to ensure the highest quality of our products, however, some applications with exceptionally large external noise disturbance and static electricity, or failure in input power, wiring and components may result in unexpected action. It is highly recommended that you make a fail-safe design and secure the safety in the operative range.
- If the motor shaft is not electrically grounded, it may cause an electrolytic corrosion to the bearing, depending on the condition of the machine and its mounting environment, and may result in the bearing noise. Checking and verification by customer is required.
- Failure of this product depending on its content may generate smoke of about one cigarette. Take this into consideration when the application of the machine is clean room related.
- Please be careful when using the product in an environment with high concentrations of sulfur or sulfuric gases, as sulfuration can lead to disconnection from the chip resistor or a poor contact connection.
- Do not input a supply voltage which significantly exceeds the rated range to the power supply of this product. Failure to heed this caution may lead to damage of the internal parts, causing smoke and/or fire and other troubles.
- The user is responsible for matching between machine and components in terms of configuration, dimensions, life expectancy, characteristics, when installing the machine or changing specification of the machine. The user is also responsible for complying with applicable laws and regulations.
- Manufacturer's warranty will be invalid if the product has been used outside its stated specifications.
- Component parts are subject to minor change to improve performance.
- Read and observe the instruction manual to ensure correct use of the product.

Repair Consult to the dealer from whom you have purchased this product for details of repair work.
When the product is incorporated to the machine you have purchased, consult to the machine manufacturer or its dealer.

MINAS A6 Family

More compact, more faster and more easy-to-use Servomotors that meet the demands of the present age.

The MINAS A6 Family of advanced AC servomotors is changing the landscape of industrial machinery.

Robots

A robot is required to operate stably despite arm posture and position, workload and other conditions changing from moment to moment. The MINAS A6 Family assures stable operation by suppressing effects of load to a minimum using "adaptive load control."

Processing machinery

With metal processing machine, it is very difficult to render mirror-like finishing on a polygonal body. The A6 Family realizes "3.2 kHz frequency response" to improve feedback responsiveness, thus enabling mirror surfacing without generating lines or streaks.

Component mounting machines

The A6 Family also shows its versatility when used with a component mounting machine where speed and positional accuracy are demanded. In addition to high frequency response, it can process accidental disturbances with the help of built-in "adaptive load control," thus maintaining high productivity.

Servomotors that flexibly and effectively fit into

various system configurations

MINAS A6 Family

Motor

- MSMF Low inertia
- MDMF Middle inertia
- MQMF Middle inertia/Flat type
- MGMF Middle inertia/Low speed high torque
- MHMF High inertia
- MHMF with gear reducer

Slim design and position control type

E series

- Ultra-small design and pulse train command type only, DIN-rail mountable (using mounting Kit)
- Rated output: 50 W to 400 W

MINAS A6 DC 24 V / 48 V type Special order product

- DC24 V / DC48 V power supply support, ultra-compact motor and driver.
- Rated output : DC24 V: 100 W, 200 W DC48 V: 200 W, 400 W (Both have a flange angle of 60 mm)

MINAS A5 DC 24 V / 48 V type Special order product

RTEX Realtime Express **EtherCAT**

A5M/A5ML series A5MN/A5MNL series A5MB/A5MBL series

- DC24 V / DC48 V power supply support, ultra-compact motor and driver.
- Rated output: · Flange size 20 mm square/10 W · Flange size 25 mm square/10 W, 20 W, 30 W

Swifter, smarter and easier to use

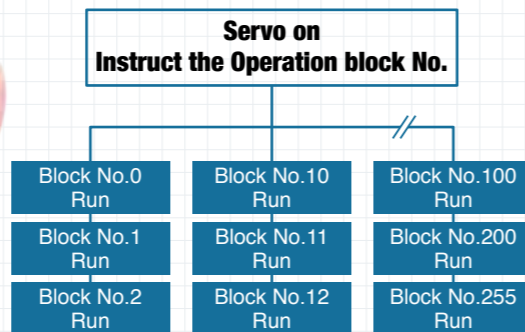

MINAS A6 Family

Powered Up compact driver

- New two-degree-of-freedom control system
- Frequency response 3.2 kHz
- Built-in filters and adjusting functions
- PANATERM Support
- Modbus Support (A6SF, A6SG Series)
- Block operation position control (Supports Modbus and external I/O)

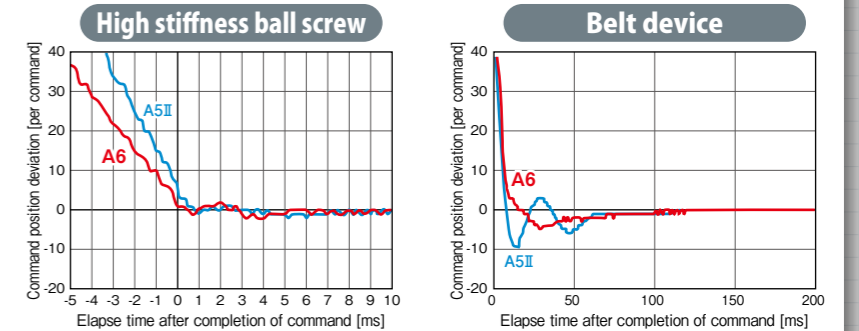

Image of block operations

High-speed response, high-precision positioning for quick and accurate movement

Our proprietary algorithm in addition to upgraded CPU and other hardware realized further high-speed response. Furthermore, high-precision positioning is achieved by automatically eliminating micro vibrations and machine oscillation caused by the resonance.

Comparison of position setting waveforms

Example of operation with processing machine

A mirror finish is obtained even if a process that tends to cause streaking.

Easy and quick setting, shortening conventional settling time by approx. 64%*1

Newly developed fit gain function substantially reduces adjustment time. Adaptive notch filter and various gains can be automatically set and adjusted.

Adjustment completed in only 3 processes

Fit gain adjustment window

Automatically proposes various settings

Realized 3.2 kHz frequency response to improve productivity

Realizes 3.2 kHz frequency response. At 139% that of conventional models *1, it enables high-speed operation and improves productivity.

*1 Comparison with conventional product A5II Family

Reduced maintenance work

and trouble.

Lineup of motors protected by high dust-proof, high heat-resistant oil seal (With protective lip)

Motors protected by a highly dust-proof, oil-tight oil seal (with protection lip) have been added to the lineup of motor products equipped with oil seals of conventional specifications. The oil seals of this type of motor are made of a material of higher heat resistance.

You can select appropriate motor type according to your application environment such as dusty, powdery or gear connection necessity.

- Oil-seals (with protective lip) are not available for MSMF motors with flange size 80 mm or smaller.
- MQMF and MHMF motors with flange size of 80 mm or smaller provided with oils seals (with protective lip) are not mounting-compatible with A5 Family models.

Applicable oil seals

Flange size	Motor type	With oil seal		With oil seal (with protective lip)	
		With oil seal	Made of nitrile rubber (NBR)	With oil seal	Made of fluororubber
80 mm or less	MSMF	○	Made of nitrile rubber (NBR)	No setting	
	MHMF, MQMF	○		○	Made of fluororubber
100 mm or more	All Type	○	○	fluororubber	Mounting-compatible with A5 Family products

IP67 enclosure rating (Motors with flange size of 80 mm or smaller are order-made products)

Direct-mount connectors are used for the motor power supply and encoder input and output to improve sealing performance of the motor to IP67.

- IP67-compatible motors with flange size of 80 mm or smaller are order-made products.
- For environmental conditions of applications, refer to P.303.

What is IP?
An international standard that specifies the degree of dustproof and waterproof performance. (IP: Ingress Protection)

IP-67	
6 Dust-tight type: Totally protected against dust penetration.	7 Protected against water penetration when immersed in water for the specified period of time and under the specified pressure.

Lifespan diagnosis / degradation diagnosis

It warns expected lifetime of the motor & driver, and deterioration limit of the equipment.

Geared servomotor

The geared servomotor lineup is also added.

Other driver functions

Adaptive load control

Adaptive load control automatically sets the best suitable gain table in response to fluctuations in inertia caused by changes in workload, thus keeping machines operating stably at all times.

Friction torque compensation

This function reduces the effect of machine related friction and improves responsiveness. Three kinds of friction compensation can be set: unbalanced load compensation, which sets an offset torque that is constantly applied; kinetic friction compensation, which changes direction in response to the direction of movement; and viscous friction compensation, which changes according to the speed command.

Manual/Auto damping filter

Equipped with a damping filter that is automatically set through the setup support software. This filter removes the natural vibration frequency component from the command input, greatly reducing vibration of the axis when stopping. The number of filters for simultaneous use has been increased to three from the conventional two filters. (Two from one in the two-degree-of-freedom-control mode.) The adaptive frequency has also been significantly expanded from 0.5 Hz to 300 Hz.

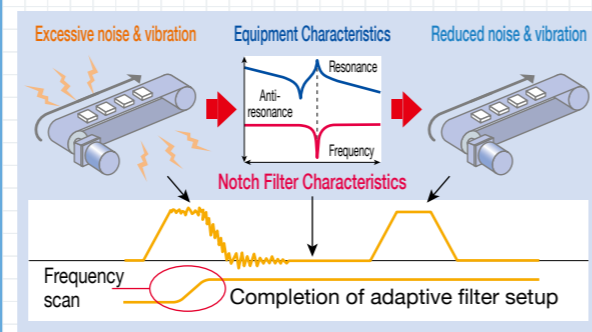

Manual/Auto notch filter

Equipped with auto-setting notch filters for greater convenience. Now there is no need to measure troublesome vibration frequencies.

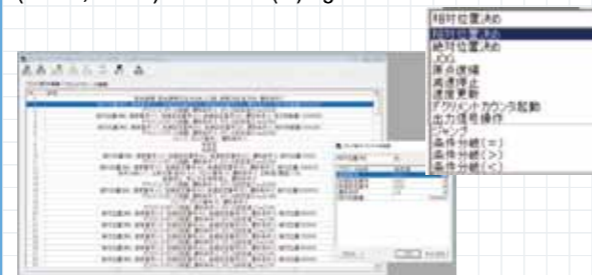

Our notch filters automatically detect vibration and provide simple auto-setting. These notch filters greatly reduce noise and vibration caused by equipment resonance and respond quickly.

The A6 Family is equipped with 5 notch filters with frequencies settable from 50 Hz to 5000 Hz. Depth can be individually adjusted within this range. (Two of the filters share automatic settings.)

Block operation function

256 block patterns can be created. Easy control is possible because the instruction can be given to block No. by Modbus (RS232, RS485) or interface (IO) signal.

3-step gain

A 3-step gain switch is available in addition to the normal gain switch. This chooses appropriate gain tunings at both stopping and running. The 3-step gain switch gives you choices of 3 different tunings for normal running, stopping for faster positioning and at stopping. The right gaining tunings achieve lower vibration and quicker positioning time of your application.

Supports semi-/full-closed loop (8 Mpps input pulse, 4 Mpps output pulse) control.

Supports full-closed loop control. The A6SF series accommodates a command input of 8 Mpps and feedback output of 4 Mpps, enabling high-resolution, high-speed operation. Supports the industry's leading positioning resolution commands (pulse-train commands).

- The A6SE and A6SG series do not support full-closed loop control.
- Applicable scale: AB-phase feedback scale (general purpose product) and serial feedback scale (dedicated to Panasonic format product)

Dynamic braking

With parameter settings, you can select dynamic braking, which shorts servomotor windings U, V and W at Servo-OFF, during positive direction/ negative direction, and during power shutdown and tripping of the circuit breaker for over travel inhibition.

- The desired action sequence can be set up to accommodate your machine requirements.

Inrush current preventive function

This driver is equipped with a rush current preventive resistor to prevent the circuit breaker from shutting off the power supply as a result of inrush current occurring at power-on.

Inertia ratio conversion

You can adjust right inertia ratio by Inertia ratio conversion input (J-SEL) of interface. When you have significant load inertia changes, it can adjust unbalanced speed and position gain turning combination. It ends up quicker response of your system.

Input/output signal assignment

You can use the parameters to arbitrarily allocate the universal 10 inputs and 6 outputs. (Inputs can be selected as either A contacts or B contacts). The Panaterm setup software provides an exclusive screen for a more simplified setup.

Torque limiter switching

These can be used for applications such as simplified pressure, tension control, and sensor-less homing.

Parameter initialization

Using the front panel or by connecting a PC, you can restore the parameters to the factory settings.

Regenerative energy discharge

A regenerative resistor is used to discharge regenerative energy, which is the energy generated when stopping a load with a large moment of inertia or when using this unit in vertical operation. This energy is returned to the driver from the motor.

- Frame A, and frame B model drivers do not contain a regenerative resistor. Optional regenerative resistors are recommended.
- Frame C to frame F model drivers contain one regenerative resistor; however, adding an optional regenerative resistor provides additional regeneration capability.

Multifunctional software for quick adjustment support

PANATERM set-up support software

The PANATERM set-up support software, with many added features. The PANATERM assists users in setting parameters, monitoring control conditions, setup support, and analyzing mechanical operation data on the PC screen, when installed in a commercially available personal computer, and connected to the MINAS A6 Family through the USB interface. Choose either English, Japanese, Chinese, Korean-language display.

Please download from our web site and use after install to the PC.

<https://industrial.panasonic.com/ww/products/motors-compressors/fa-motors/ac-servo-motors/minas-a5-panaterm>

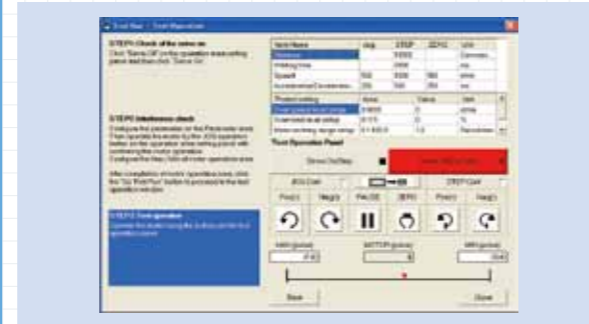

Setup wizard

This wizard supports fundamental settings in each control mode step by step, including reading of default setting. In On-line condition, Input data related to each step can be monitored in real time.

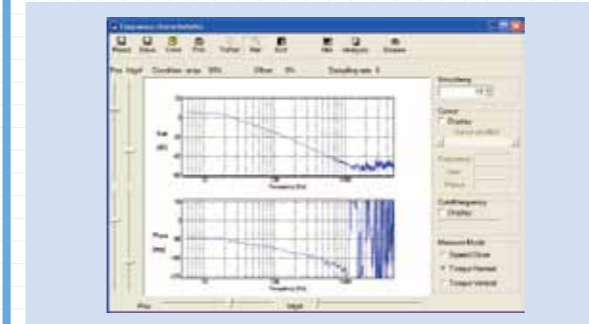

Trial run

This function supports positioning with the Z-phase search and software limit.

Frequency characteristics measurement function

Can check frequency response characteristics of the mechanism and motor. Since resonance frequency of the mechanism is measurable, it is effective for start-up time reduction.

Service Life Prediction

The service life prediction function considers the internal temperature for main components such as the fan and condenser. If the rated value is exceeded, an alarm is displayed. This approach prevents unexpected suspension of operation and allows for planning of systemized maintenance.

Note: The life span prediction value should be considered as a guide only.

Item	Value	Unit	Status
Encoder temperature	30	%	
Encoder temperature	34	degrees	
Number of times of inverter resistance	0	times	
Number of times of CB inverter changing	0	times	
Fan operation time	00	%	
Fan life time integrated value	00	%	
Condenser life time integrated value	00	%	
Motor usage	0	%	

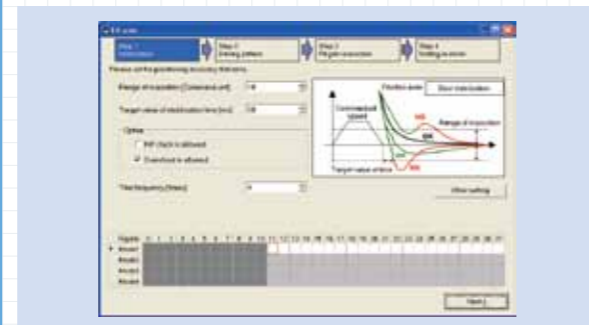

The fit gain function for setting Two-degree-of-freedom control.

- 1) Select the adjustment method
- 2) Load measurement
- 3) Confirming results Adjust gain to meet your needs

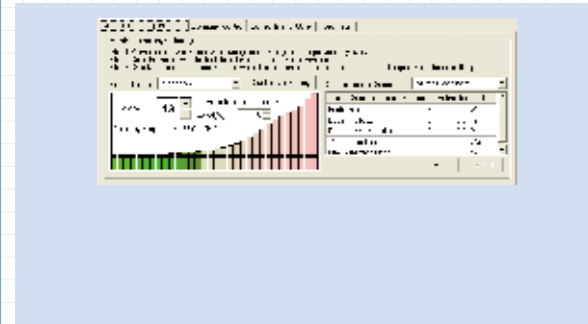

Fit gain

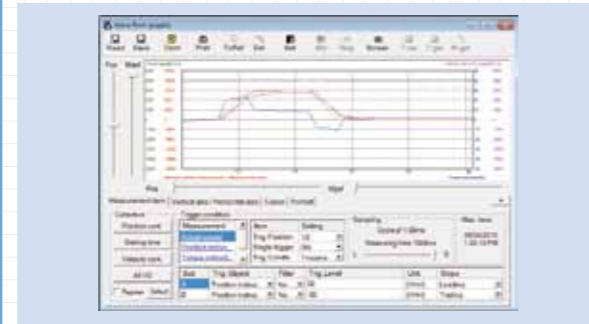

This function automatically searches the best suitable stiffness setting and mode and adjusts the gain once the target in-position range and setting time are set.

Added New screen for gain adjustment, equipped with stiffness oscillation auto-reduction function

Significant increase of measuring objects Multi-functional waveform graphic

Encoder temperature monitor

The Encoder Temperature Monitor is a new function capable of real-time measurement of the interior temperature of the encoder, something that has been difficult to achieve in the past. It is valuable for monitoring the motor and can be used as a diagnostic in the event of a malfunction.

Deterioration diagnosis

From the equipment information that can be detected by the motor, it is possible to display and check the deterioration and aging status of the equipment.

Other features It has convenient functions such as motor / driver information such as load factor, power supply voltage, driver temperature etc, logging function capable of recording interface recording, display function of non-rotating factors etc
 ●Deterioration diagnosis ●Block action editor / monitor (A6SE, A6SG, A6SF series) ●Battery refresh ●Object editor (A6BE, A6BF series)

Hardware configuration

Personal computer	CPU	800 MHz or more
	Memory	System memory 512 MB or more Graphics memory 32 MB or more
	Hard disk capacity	Vacancy of 512MB or more recommended
OS	OS	Windows® Vista SP1 (32 bit), Windows® 7 (32 bit, 64 bit), Windows® 8 (32 bit, 64 bit), Windows® 10 (32 bit, 64 bit) Japanese, English, Chinese (Simplified), Korean version
	Serial communication function	USB port, COM port (Communication speeds: 2400 bps to 115200 bps) * A COM port is required to use RS232 communications. A 9600 bps or higher baud rate is recommended.
Display	Resolution	1024 × 768 pix or more
	Number of colors	24 bit colors (TrueColor) or more

<CAUTION> This software is applicable only to A5 Family, A6 Family. To apply this software to A, AIII, E or A4 series, consult our distributors.

Lineup of two types of network

Realtime Express(RTEX)

Ultimate Real-time performance

- Com. period min. **0.0625 ms**
- Com. speed **100 Mbps** Full-duplex
- Velocity response **3200 Hz**

Functionality to meet various needs

- Precise position latch & comparing
- Infinitely rotatable absolute encoder
- IEC safety I/F model available^{*1}

Absolute system can be configured without the battery.

Battery-less absolute encoder motor

Reduced the battery for the absolute encoder by installing the power generating element in the motor. In addition to improving maintainability, we support the construction of ecological and economical industrial machines and systems.

Maintenance work such as battery replacement is reduced because battery is not required anymore.

Reduce wasteful inventory management and replacement costs as battery is no required anymore. It contributes to the construction of ecological and economical industrial machines and systems.

DC 24 V / 48 V type Special order product

- DC24 V / DC48 V power supply support, ultra-compact motor and driver.
- Rated output :
DC24 V: 100 W, 200 W
DC48 V: 200 W, 400 W
(Both have a flange size of 60 mm)

Dual-axis servo driver Special order product Under development

- Reduced wiring by dual-axis integration
- Supports both rotary motors and linear / DD motors
- Rated output :
Max. 200 W x2-axis
Max. 400 W x2-axis
Max. 750 W x2-axis
Max. 1 kW x 2-axis

Compliance with **MINAS** A6 Family international standards

- When export this product, follow statutory provisions of the destination country.
- *1 A6SE, A6SG, A6NE and A6BE series doesn't correspond to the functional safety standard.
- *2 Information related to the Korea Radio Law
This servo driver is a Class A commercial broadcasting radio wave generator not designed for home use.
The user and dealer should be aware of this fact.

A 급 기기 (업무용 방송통신기자재)
이 기기는 업무용(A 급) 전자파적합기기로서 판매자 또는 사용자는 이 점을 주의하시기 바라며, 가정외의 지역에서 사용하는 것을 목적으로 합니다.
(대상기종 : Servo Driver)

This products is not an object of china compulsory certification (CCC).

Low noise, compliant with EMC directives

Radiated noise is minimized to meet EMC directives and to support international standards.

Compliance with EU safety standards.

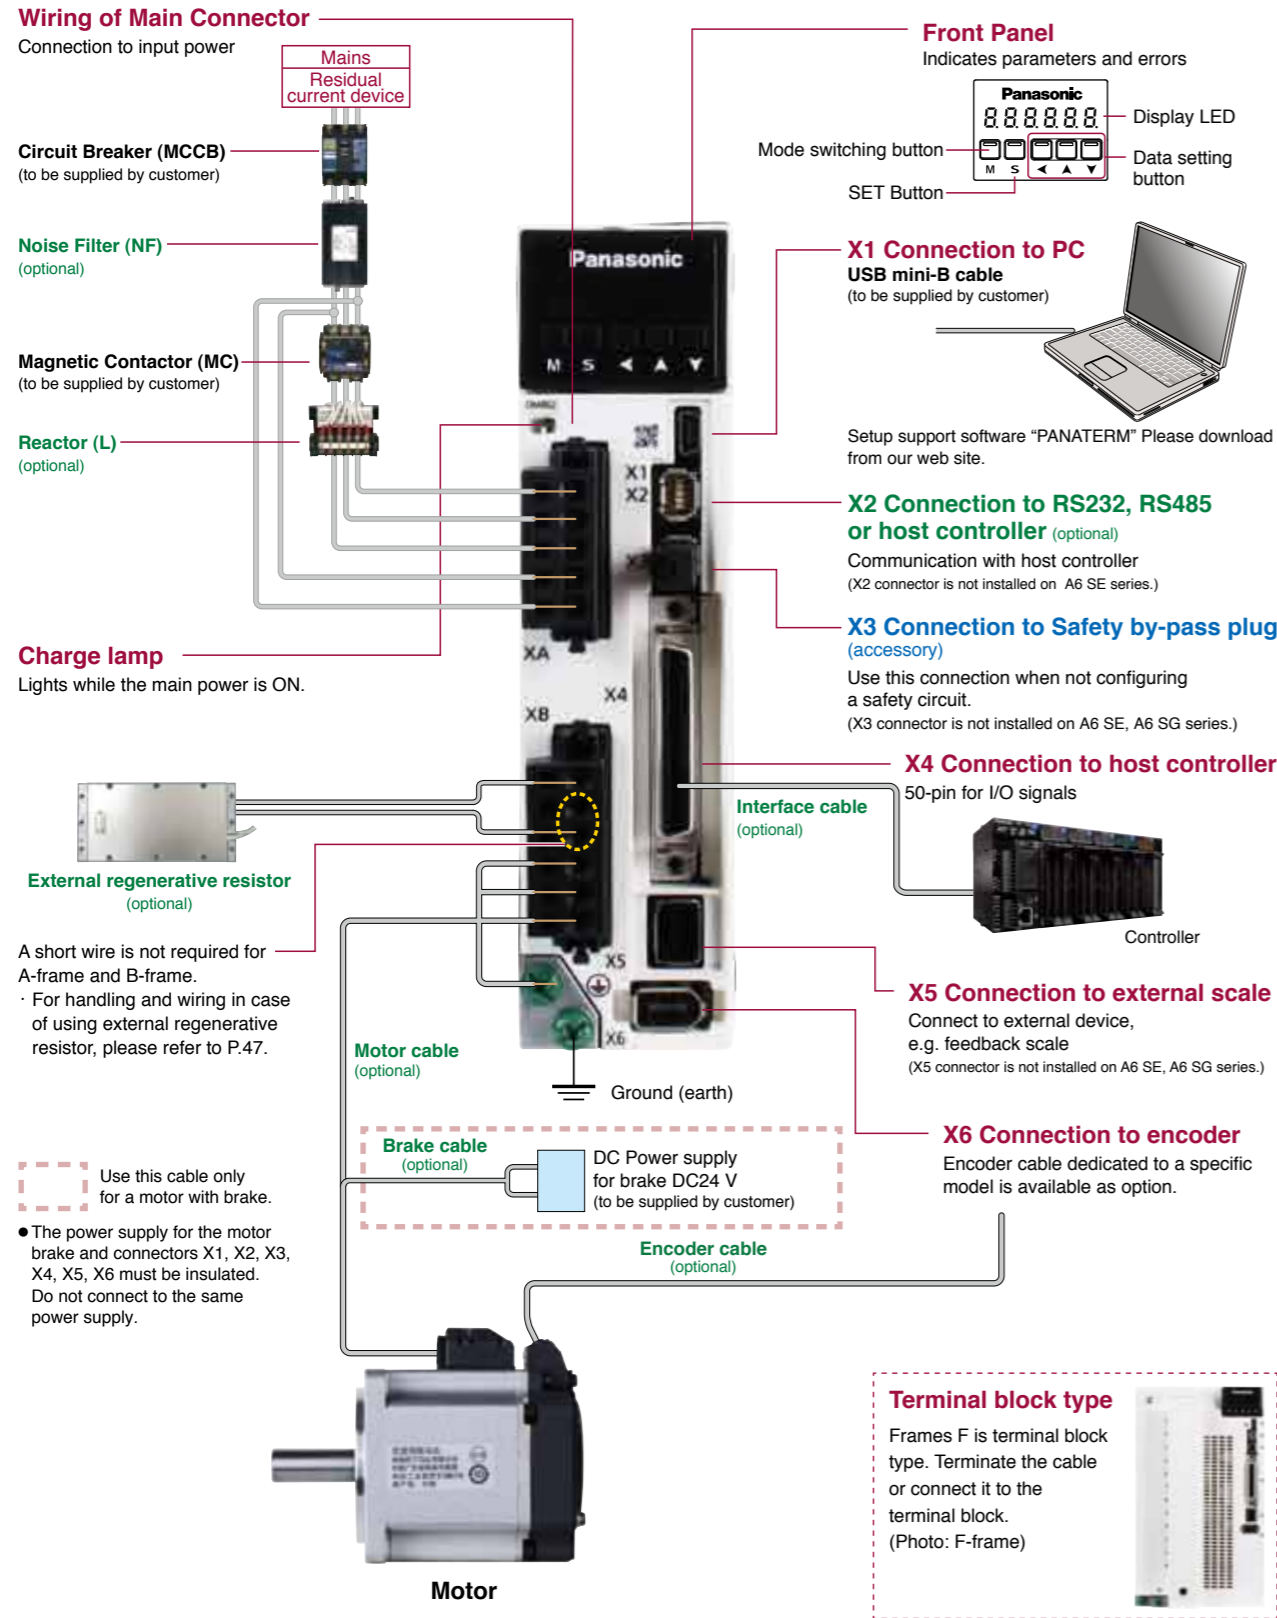

Features non-software-based independent redundant circuitry for motor power isolation. Independent redundant circuitry for motor power isolation. This obviates the need for magnetic contactors to isolate the required motor in order to accommodate low-voltage machinery commands.(The final safety compliance must be applied as machine.)

SEMI-F47

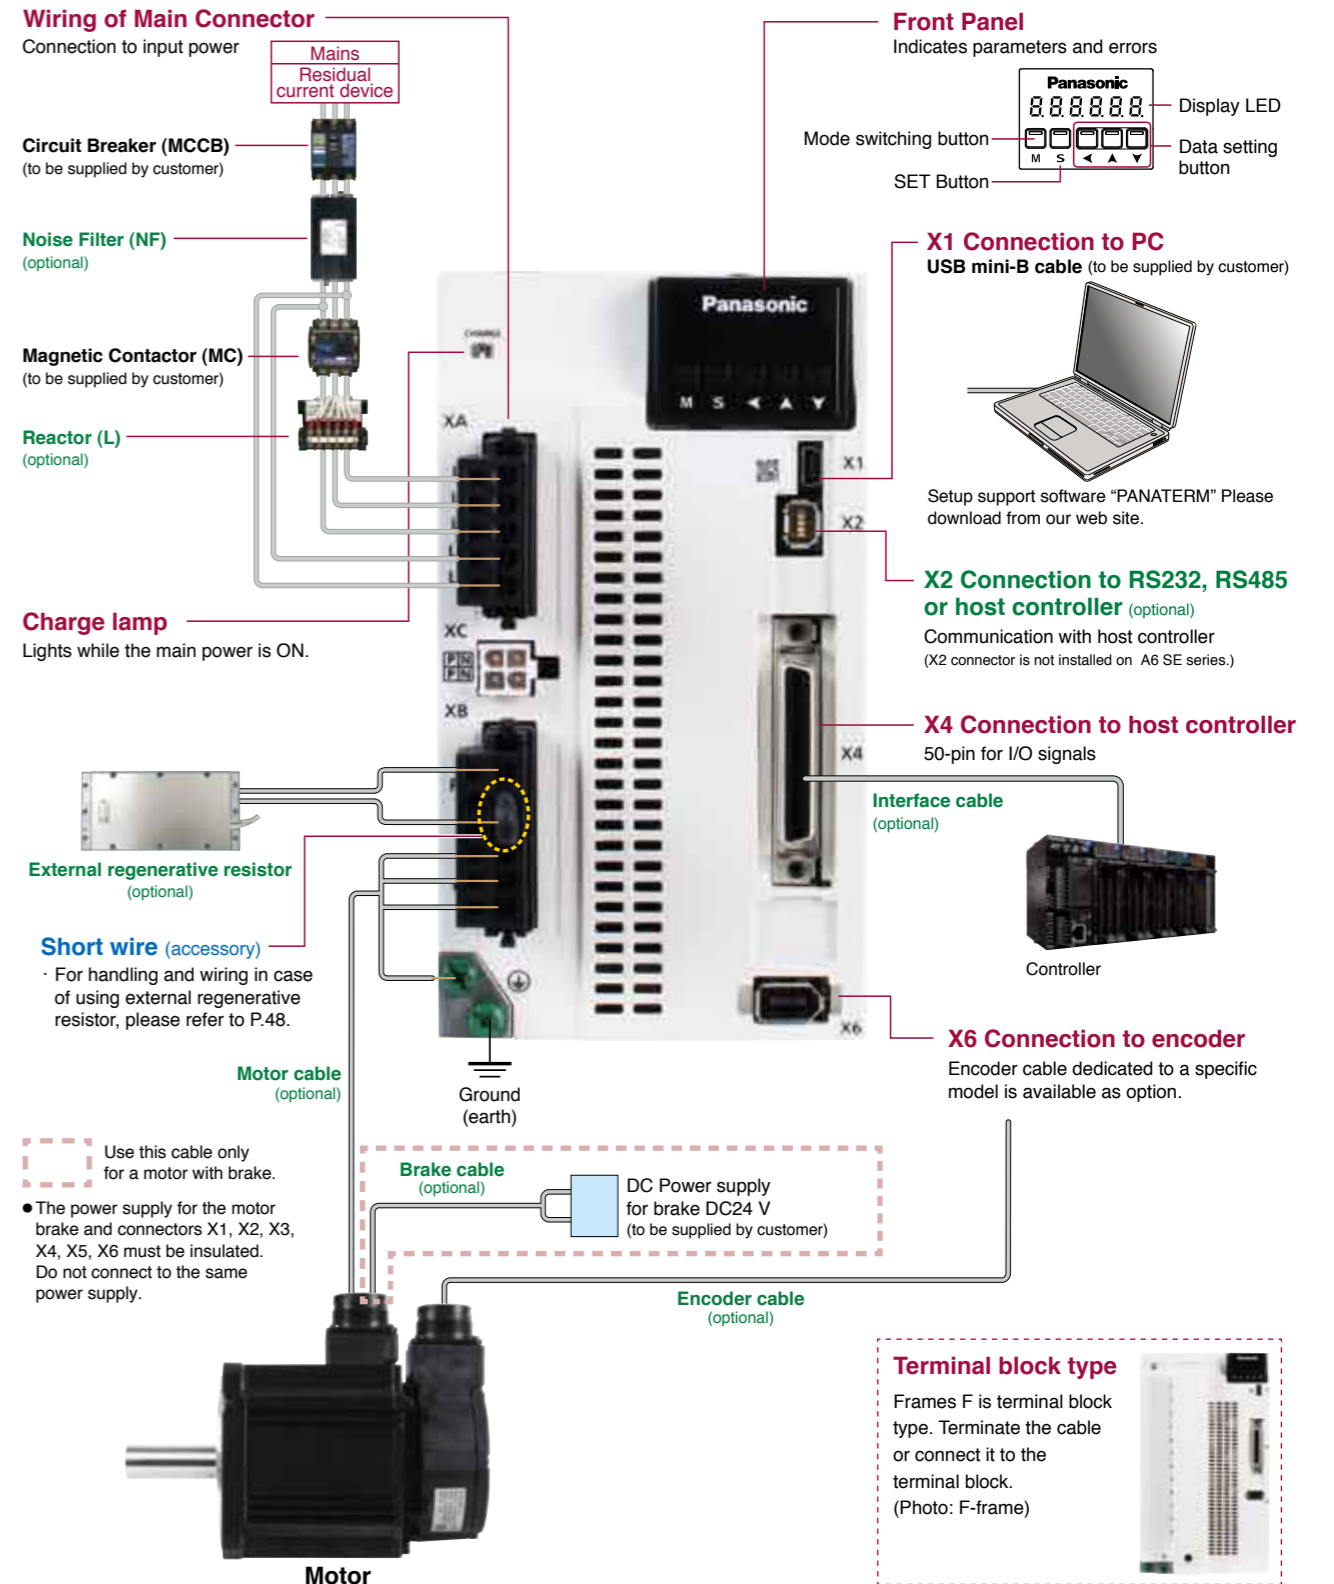

Includes a function in compliance with the SEMI F47 standard for voltage sag immunity under no load or light load. Ideal for the semiconductor and LCD industries.

- Excluding the single-phase 100-V type.
- Please verify the actual compliance with your machine checking the F47 standard for voltage sag immunity.

<A6SF Series (Driver: A-frame Motor: 200 W)>

<A6SG Series/ A6SE Series (Driver: D-frame Motor: 1.0 kW)>

<Caution>

Apply adequate tightening torque to the product mounting screw by taking into consideration strength of the screw and the characteristics of material to which the product is installed. Overtightening can damage the screw and/or material; undertightening can result in loosening.

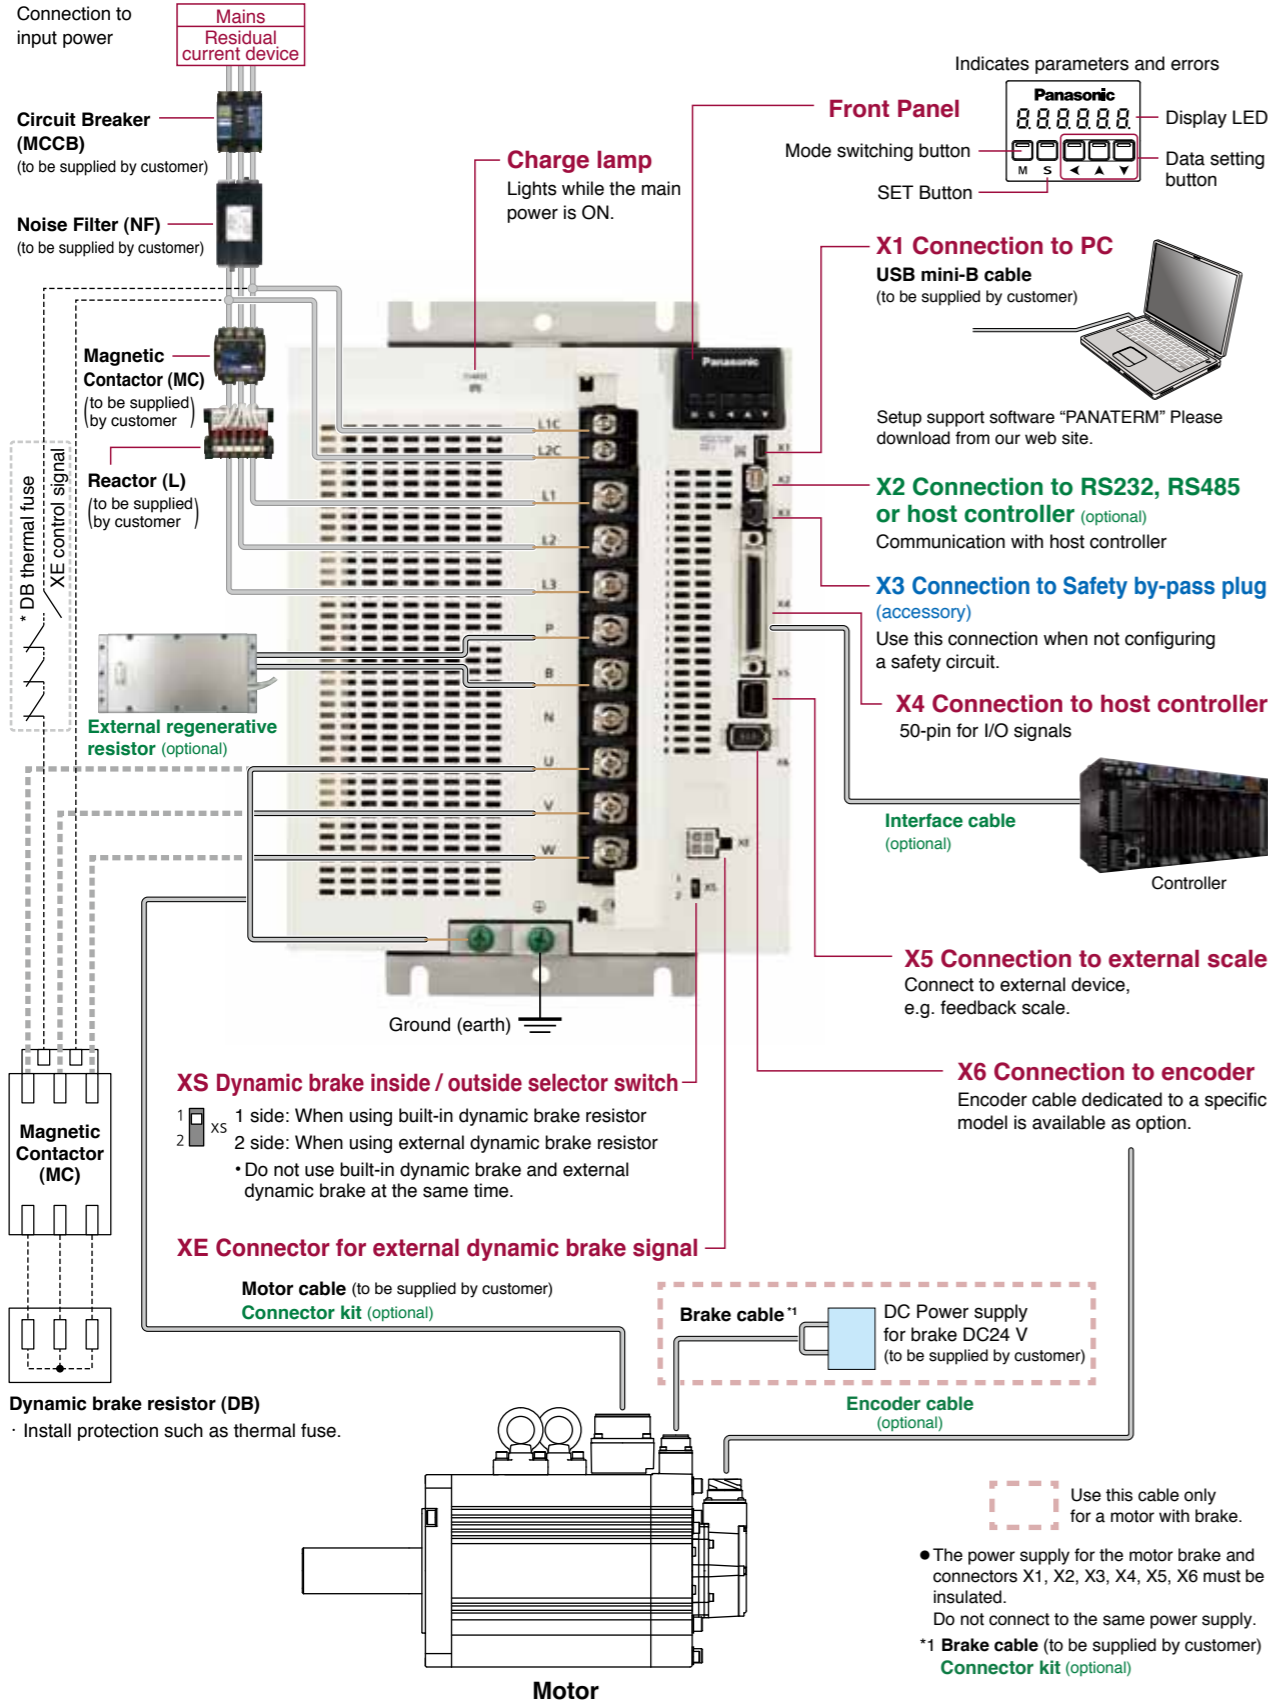

<Note>

Initial setup of rotational direction:
positive = CCW and negative = CW.
Pay an extra attention.

<A6SF Series (Driver: G-frame Motor: 7.5 kW)>

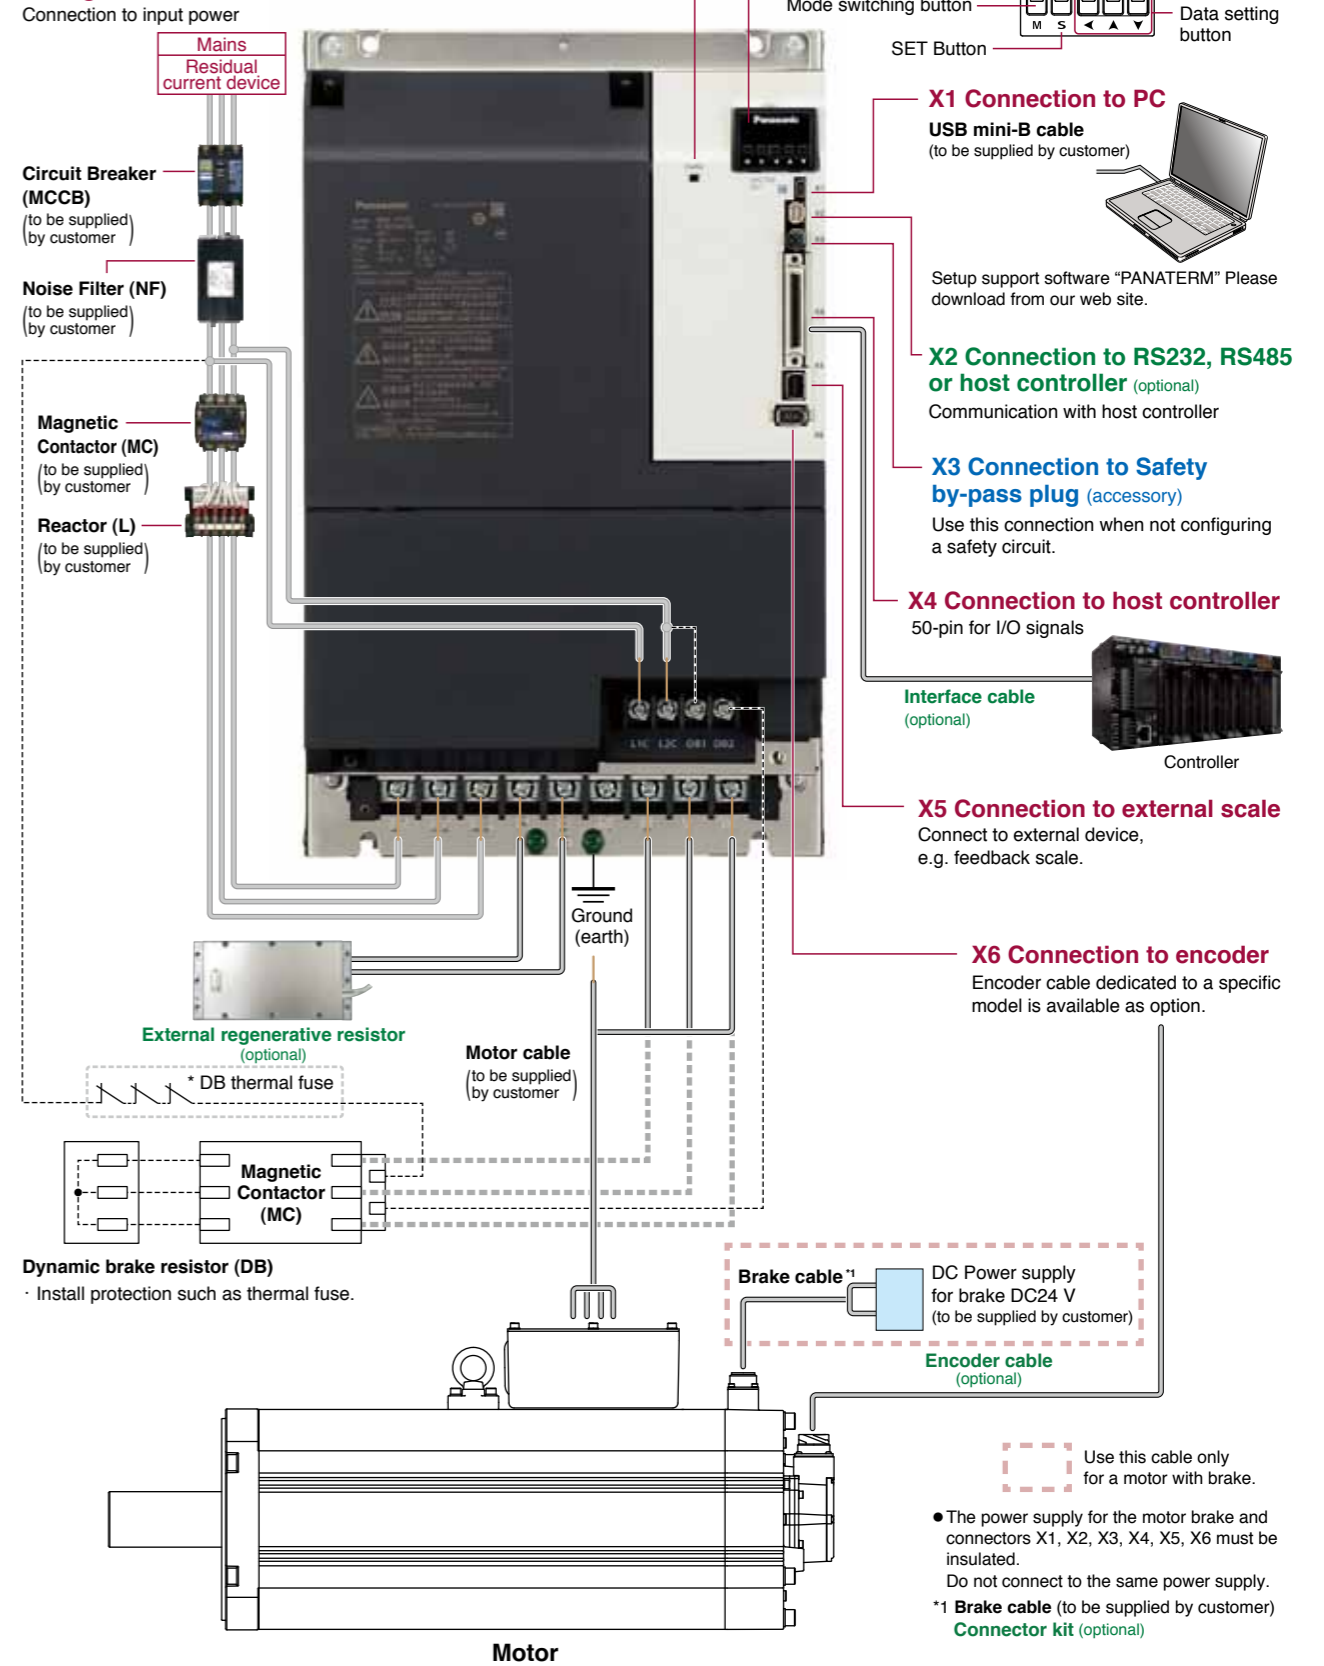

Wiring of Main Connector

<Caution> Apply adequate tightening torque to the product mounting screw by taking into consideration strength of the screw and the characteristics of material to which the product is installed. Overtightening can damage the screw and/or material; undertightening can result in loosening.

<A6SF Series (Driver: H-frame Motor: 22.0 kW)>

Wiring of Main Connector

<Note> Initial setup of rotational direction: positive = CCW and negative = CW. Pay an extra attention.

*1 Select peripheral devices for single/3phase common specification according to the power source.
 *2 The magnetic contactor used for the external dynamic brake resistor should have the same rating as the magnetic contactor used for the main circuit.
 *3 For the ground screw, use the same crimp terminal as that for the main circuit terminal block.
 *4 The thickness of the grounding wire and the thickness of the external dynamic brake resistor should be the same as or larger than the thickness of the motor wire. The motor wire is a shielded wire that complies with the European Union Directive / UL standard. (G and H frame only)
 *5 Please use all to comply with international standards.
 *6 22.0 kW The connection of the motor power line is a terminal block. In order to comply with the CSA standard, it is necessary to use a CSA standard-certified power wire round terminal.

● About circuit breaker and magnetic contactor

To comply to EC Directives, install a circuit breaker between the power and the noise filter without fail, and the circuit breaker should conform to IEC Standards and UL recognized (Listed and  marked).

Suitable for use on a circuit capable of delivering not more than 5000 Arms symmetrical amperes, below the maximum input voltage of the product.

If the short-circuit current of the power supply exceeds this value, install a current limit device (current limiting fuse, current limiting circuit breaker, transformer, etc.) to limit the short-circuit current.

<Caution>

- Select a circuit breaker and noise filter which match to the capacity of power supply (including a load condition).

● Terminal block and protective earth terminals

- Use a copper conductor cables with temperature rating of 75 °C or higher.
- Use the attached exclusive connector for A-frame to E-frame, and maintain the peeled off length of 8 mm to 9 mm.

■ Fastening torque list (Terminal block screw/Terminal cover fastening screw)

Frame	Terminal name	Terminal block screw		Terminal cover fastening screw	
		Nominal size	Fastening torque (N·m) ^{Note)1}	Nominal size	Fastening torque (N·m) ^{Note)1}
MFDL	L1, L2, L3, L1C, L2C, P, RB, B, N, U, V, W	M5	1.0 to 1.7	M3	0.19 to 0.21
MGDL	L1C, L2C	M4	0.7 to 1.0	M3	0.19 to 0.21
	L1, L2, L3, P, B, N, U, V, W	M5	2.0 to 2.4		
MHDL	L1C, L2C, DB1, DB2	M4	0.7 to 1.0	M5	2.0 to 2.5
	L1, L2, L3, P, B, N, U, V, W	M6	2.2 to 2.5	M3	0.19 to 0.21

■ Fastening torque list (Ground terminal screw/Connector to host controller [X4])

Driver frame	Ground screw		Connector to host controller (X4)	
	Nominal size	Fastening torque (N·m) ^{Note)1}	Nominal size	Fastening torque (N·m) ^{Note)1}
MADL, MBDL, MCDL, MDDL, MEDL	M4	1.0 to 1.2	M2.6	0.3 to 0.35
MFDL	M5	1.8 to 2.0		
MGDL	M5	1.8 to 2.0		
MHDL	M6	2.4 to 2.6		

■ Motor: Fastening torque

Motor	U, V, W terminal Ground terminal screw		Terminal box cover fastening screw	
	Nominal size	Fastening torque (N·m) ^{Note)1}	Nominal size	Fastening torque (N·m) ^{Note)1}
MDMF 22.0 kW	M8	12.0	M5	4.4

Note)1 <Caution>

- Applying fastening torque larger than the maximum value may result in damage to the product.
- Do not turn on power without tightening all terminal block screws properly, otherwise, loose contacts may generate heat (smoking, firing) .

<Remarks>

- To check for looseness, conduct periodic inspection of fastening torque once a year.

★ : Frame-A and B drivers are not equipped with regenerative resistors. When regeneration occurs, please prepare an optional external regenerative resistor.

Note)1 □ : Represents the motor specifications. (refer to "Model designation" P.22.)

Note)2 ◇ : Represents the driver specifications. (refer to "Model designation" P.22.)

Note)3 * * : Represents the cable length (03/3 m, 05/5 m, 10/10 m, 20/20 m). Example. 3 m/MFECA0030EAE

Note)4 Because A6SE series driver (dedicated for position control) does not support the absolute system specification, only incremental system can be used in combination.

Note)5 Please note that a battery is not supplied together with 23-bit absolute encoder cable (with battery box). Please buy the battery part number "DV0P2990" separately.

Note)6 Brake cable and motor cables are required for the motors with brake.

★ : Frame-A and B drivers are not equipped with regenerative resistors. When regeneration occurs, please prepare an optional external regenerative resistor.

Note)1 □ : Represents the motor specifications. (refer to "Model designation" P.22.)

Note)2 ◇ : Represents the driver specifications. (refer to "Model designation" P.22.)

Note)3 * * : Represents the cable length (03/3 m, 05/5 m, 10/10 m, 20/20 m). Example. 3 m/MFECA0030MJJE

Note)4 Cables for opposite to output shaft cannot be used with 50 W or 100 W motor. (MSMF connector type only.)

Note)5 Because A6SE series driver (dedicated for position control) does not support the absolute system specification, only incremental system can be used in combination.

Note)6 Please note that a battery is not supplied together with 23-bit absolute encoder cable (with battery box). Please buy the battery part number "DV0P2990" separately.

Note)7 Brake cable and motor cables are required for the motors with brake.

Movable : For application where the cable is movable.
Fixed : For application where the cable is fixed.
Direction of motor shaft/Opposite direction of motor shaft : Cable direction

Note)1 □ : Represents the motor specifications. (refer to "Model designation" P.22.)

Note)2 ◇ : Represents the driver specifications. (refer to "Model designation" P.22.)

Note)3 * * : Represents the cable length (03/3 m, 05/5 m, 10/10 m, 20/20 m). Example. 3 m/MFECA0030ETE

Note)4 Because A6SE series driver (dedicated for position control) does not support the absolute system specification, only incremental system can be used in combination.

Note)5 Use of JL10 type motor cables enable one-touch lock connections. Conventional screwed type JL04V type cables can also be used.

Note)6 For other possible combinations, refer to P.343.

Note)7 Please note that a battery is not supplied together with 23-bit absolute encoder cable (with battery box). Please buy the battery part number "DV0P2990" separately.

■ About dynamic brake

G frame is built-in / external, H frame is external
 The indication of the internal / {external} dynamic brake resistance capacity is the maximum allowable inertia (load inertia moment ratio to rotor inertia moment is 10 times) up to three consecutive emergency stops at the rated speed. If used under conditions higher than that, the resistance may break and the dynamic brake may not operate.
 Recommended resistance: 1.2 Ω 400 W or more × 3 pieces
 For inquiries: Iwaki Musen Kenkyusho Co.,Ltd. Tel: +81-44-833-4311

			E-frame to H-frame	Single phase	200 V ^{+10 %} _{-15 %}	to 240 V ^{+10 %} _{-15 %}	50 Hz / 60 Hz
Environment	temperature	Ambient temperature: 0 °C to 55 °C (free from freezing) Storage temperature: -20 °C to 65 °C (Max.temperature guarantee: 80 °C for 72 hours free from condensation ¹⁾)					
	humidity	Both operating and storage : 20 %RH to 85 %RH (free from condensation ¹⁾)					
	Altitude	Lower than 1000 m					
	Vibration	5.88 m/s ² or less, 10 Hz to 60 Hz					
Control method	IGBT PWM Sinusoidal wave drive						
Encoder feedback	23-bit (8388608 resolution) absolute encoder, 7-wire serial * When using it as an incremental system (not using multi-turn data), do not connect the battery for absolute encoder. Parameter Pr. 0.15 must be set to "1" (factory settings).						
External scale feedback	A/B phase, homing signal differential input. Serial communication is also supported. Manufacturers that support serial communication scale: Fagor Automation S.Coop., HEIDENHAIN, Magnescale Co., Ltd., Mitutoyo Corporation Nidec Sankyo Corporation, Renishaw plc						
Interface connector	Control signal	Input	General purpose 10 inputs The function of general-purpose input is selected by parameters.				
		Output	General purpose 6 outputs The function of general-purpose output is selected by parameters.				
	Analog signal	Input	3 inputs (16-bit A/D : 1 input, 12-bit A/D : 2 inputs)				
		Output	2 outputs (Analog monitor: 2 output)				
Pulse signal	Input	2 inputs (Photo-coupler input, Line receiver input) Both open collector and line driver interface can be connected. High speed line driver interface can be connected.					
	Output	4 outputs (Line driver: 3 output, open collector: 1 output) Line driver output for encoder pulses (A/B/Z signal) or external feedback pulses (EXA/EXB/EXZ signal) open collector output also available for Z or EXZ signal.					
Communication function	USB	USB interface to connect to computers for parameter setting or status monitoring.					
	RS232	1:1 communication					
	RS485	1: n communication (max 31) (Supports Modbus)					
Safety function	A dedicated connector is provided for Functional Safety.						
Front panel	(1) 5 keys (2) LED (6-digit)						
Regeneration	A-frame, B-frame, G-frame, H-frame: no built-in regenerative resistor (external resistor only) C-frame to F-frame: Built-in regenerative resistor (external resistor is also enabled.)						
Dynamic brake	A-frame to G-frame: Built-in H-frame: External resistor only						
Control mode	Switching among the following 7 mode is enabled, (1) Position control (2) Speed control (3) Toque control (4) Position/Speed control (5) Position/Torque control (6) Speed/Torque control (7) Full-closed control						

*1 Air containing water vapor will become saturated with water vapor as the temperature falls, causing dew.

Control input	(1) servo-ON input (2) Alarm clear input (3) Gain switch input (4) Positive direction drive inhibit input (5) Negative direction drive inhibit input (6) Forced alarm input (7) Inertia ratio switch input					
	Control output					
Control output						
Control input						
Control output						
Position control	Pulse input	Max. command pulse frequency	500 kpps (Optocoupler interface), 8 Mpps (When using line receiver input multiplied by 4)			
		Input pulse signal format	Differential input. Selectable by parameter. ([1]Positive/Negative pulse [2]A/B quadrature [3]Pulse/Direction)			
		Electronic gear (Division/Multiplication of command pulse)	Applicable scaling ratio: 1/1000 times to 8000 times Any value of 1 - 2 ³⁰ can be set for both numerator (which corresponds to encoder resolution) and denominator (which corresponds to command pulse resolution per motor revolution), but the combination has to be within the range shown above.			
		Smoothing filter	Primary delay filter or FIR type filter is adaptable to the command input			
Analog input	Torque limit command input		Individual torque limit for both positive and negative direction is enabled.			
	Torque feed forward input		Analog voltage can be used as torque feed forward input.			
Two-degree-of-freedom control						
Anti-vibration control						
Load variation suppression control						
Block operation						
Modbus (RS 232, RS 485) or interface is selectable						
Control input						
Control output						
Speed control	Analog input	Velocity command input	Velocity command input with analog voltage is possible. Scale setting and command polarity vary depending on parameters. (6 V/Rated rotational speed: Default)			
		Torque limit command input	Individual torque limit for both positive and negative direction is enabled.			
		Torque feed forward input	Analog voltage can be used as torque feed forward input.			
Internal velocity command						
Soft-start/down function						
Speed zero clamp						
Two-degree-of-freedom control						
Torque control	Speed zero clamp input, torque command sign input, control mode switch input.					
	Control input					
	Control output					
	Analog input	Torque command input		Torque command input with analog voltage is possible. Scale setting and command polarity vary depending on parameters. (3 V/rated torque Default)		
Speed limit function						
Speed limit value with parameter is enabled.						
Full-closed control	Control input					
	Control output					
Full-closed control	Pulse input	Max. command pulse frequency	500 kpps (Optocoupler interface), 8 Mpps (When using line receiver input multiplied by 4)			
		Input pulse signal format	Differential input. Selectable by parameter. ([1]Positive/Negative pulse [2]A/B quadrature [3]Pulse/Direction)			
		Electronic gear (Division/Multiplication of command pulse)	Applicable scaling ratio: 1/1000 times to 8000 times Any value of 1 - 2 ³⁰ can be set for both numerator (which corresponds to encoder resolution) and denominator (which corresponds to command pulse resolution per motor revolution), but the combination has to be within the range shown above.			
		Smoothing filter	Primary delay filter or FIR type filter is adaptable to the command input			
Analog input	Torque limit command input		Individual torque limit for both positive and negative direction is enabled.			
	Torque feed forward input		Analog voltage can be used as torque feed forward input.			
Setting range of external scale division/multiplication						
Two-degree-of-freedom control						
Anti-vibration control						
Load variation suppression control						
Block operation						
Modbus (RS 232, RS 485) or interface is selectable						
Common	Auto tuning					
	The load inertia is identified in real time by the driving state of the motor operating according to the command given by the controlling device and set up support software "PANATERM". The gain is set automatically in accordance with the rigidity setting.					
	Division of encoder feedback pulse					
	Set up of any value is enabled (encoder pulses count is the max.).					
Protective function	Hard error		Over-voltage, under-voltage, over-speed, over-load, over-heat, over-current and encoder error etc.			
	Soft error		Excess position deviation, command pulse division error, EEPROM error etc.			
Alarm data trace back						
Tracing back of alarm data is available

Alarm data trace back		Tracing back of alarm data is available			

In Case of Single phase, A-frame, B-frame, 100 V / 200 V type

● In Case of Leadwire type

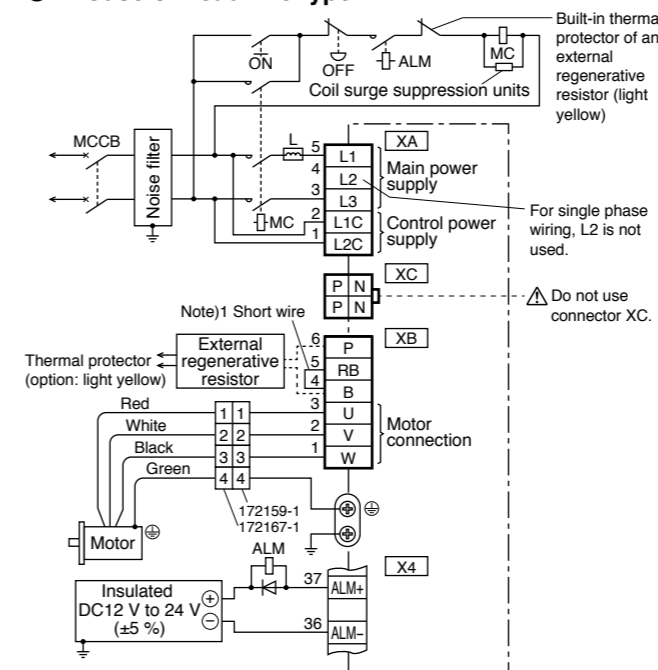

● In Case of Connector type

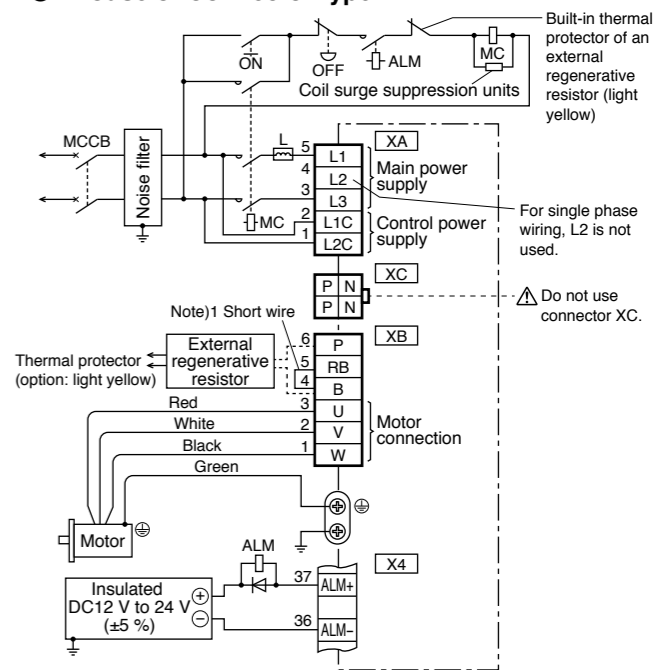

- The pin number of X4 is based on the factory setting parameters.
- * Power supply for motor brake and connector X4 requires insulation. Do not connect to the same power supply.

In Case of Single phase, C-frame, D-frame, 100 V / 200 V type

● In Case of Leadwire type

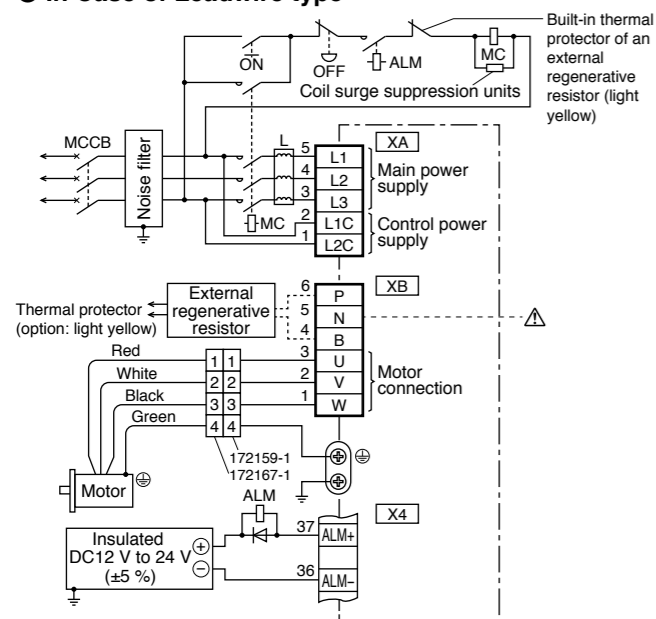

● In Case of Connector type

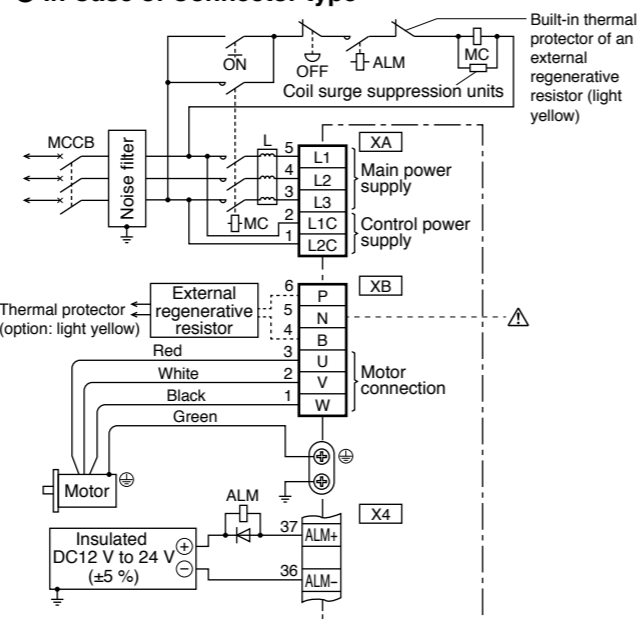

- The pin number of X4 is based on the factory setting parameters.
- * Power supply for motor brake and connector X4 requires insulation. Do not connect to the same power supply.

In Case of 3-phase, A-frame, B-frame, 200 V type

● In Case of Leadwire type

● In Case of Connector type

- The pin number of X4 is based on the factory setting parameters.
- * Power supply for motor brake and connector X4 requires insulation. Do not connect to the same power supply.

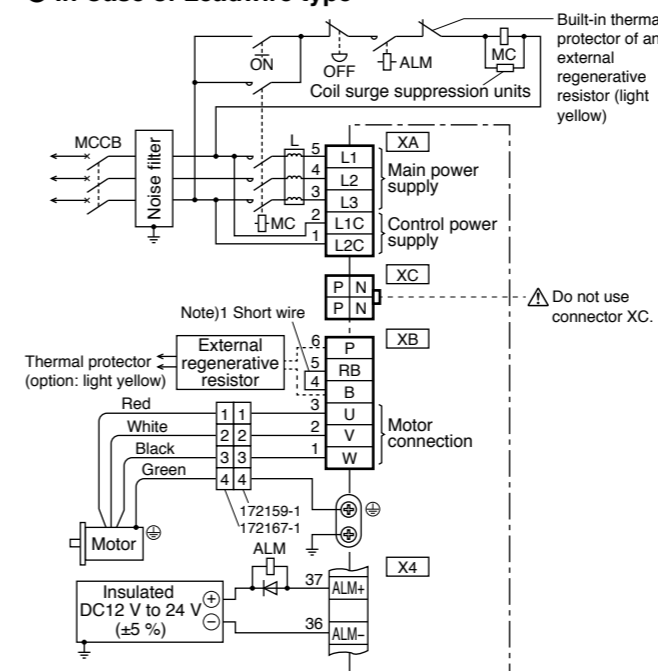

Connect an external regenerative resistor.

Frame No.	Short wire (Accessory)	Built-in regenerative resistor	Connection of the connector XB ⚠ Do not connect anything to N.	
			In case of using an external regenerative resistor	In case of not using an external regenerative resistor
A-frame B-frame	without	without	• Connect an external regenerative resistor between P-B.	• Always open between P-B.

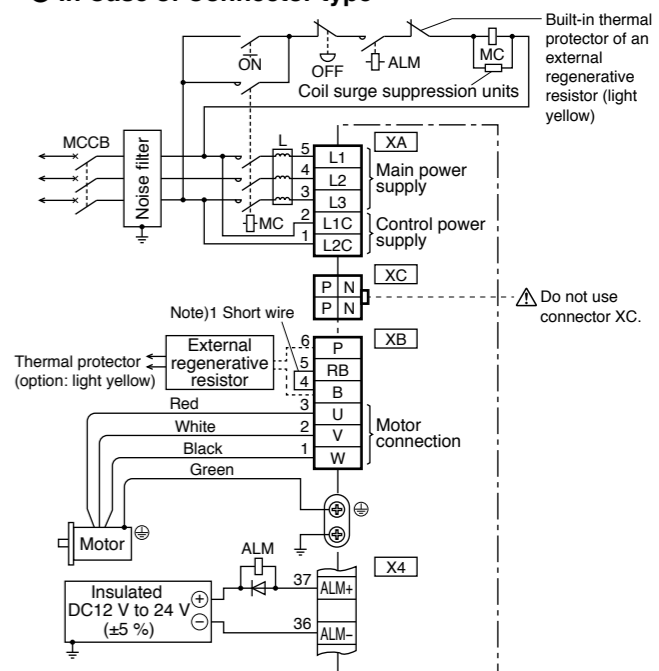

* Refer to P.307 Specifications of Motor connector.

In Case of 3-phase, C-frame, D-frame, 200 V type

● In Case of Leadwire type

● In Case of Connector type

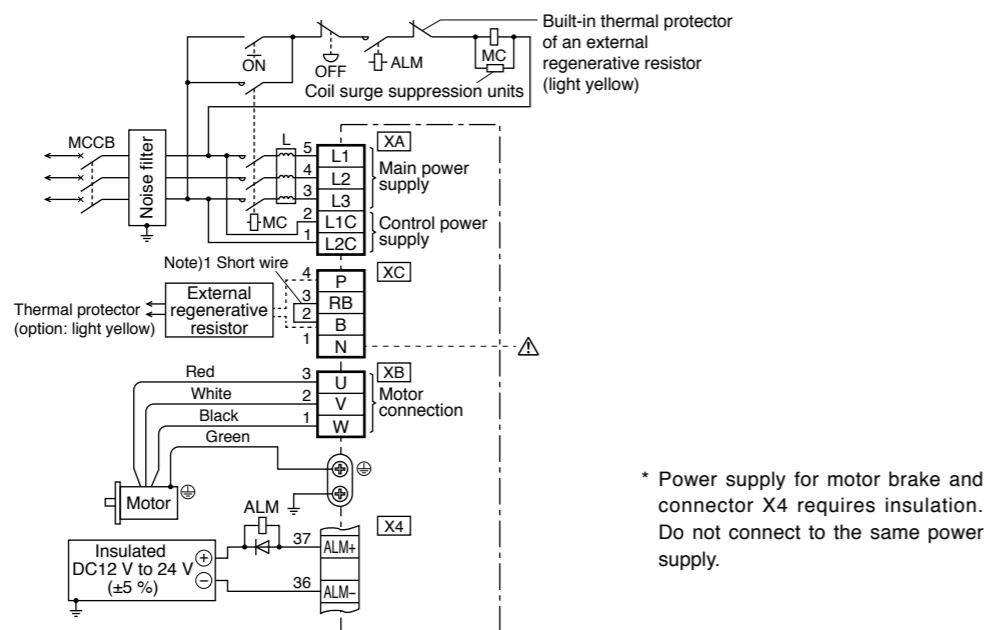

- The pin number of X4 is based on the factory setting parameters.
- * Power supply for motor brake and connector X4 requires insulation. Do not connect to the same power supply.

Note)1

Frame No.	Short wire (Accessory)	Built-in regenerative resistor	Connection of the connector XB ⚠ Do not connect anything to N.	
			In case of using an external regenerative resistor	In case of not using an external regenerative resistor
C-frame D-frame	with	with	• Remove the short wire accessory from between RB-B. • Connect an external regenerative resistor between P-B.	• Shorted between RB-B with an attached short wire

* Refer to P.307, P.308, Specifications of Motor connector.

In Case of 3-phase, E-frame, 200 V type

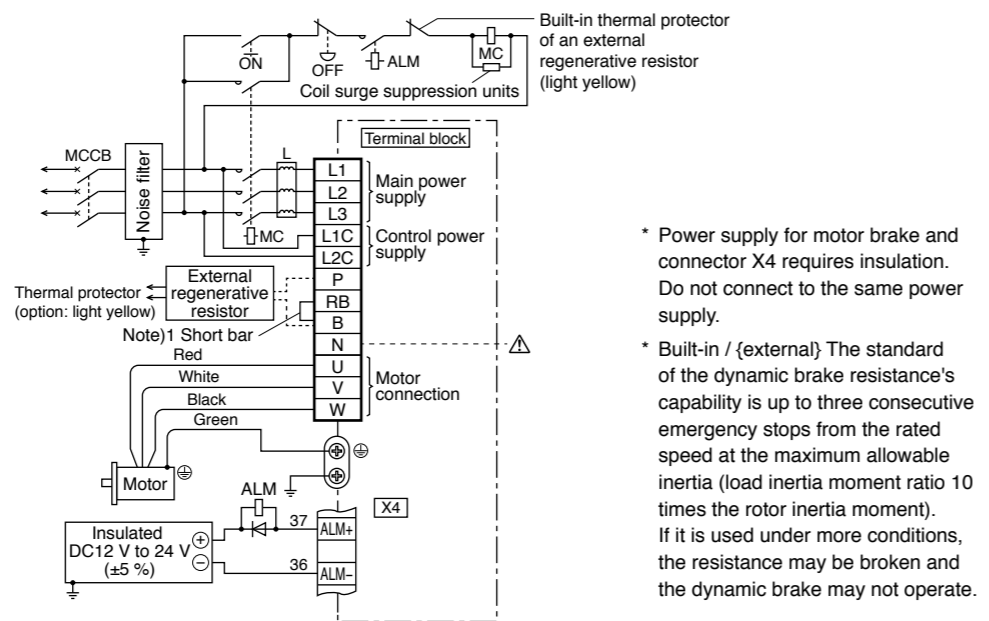

• The pin number of X4 is based on the factory setting parameters.

Note)1

* Refer to P.308, Specifications of Motor connector.

■ About the Dynamic Brake

G frame has built-in dynamic brake resistor. When using built-in dynamic brake, set switch XS to "1" side. When exceeding the capacity of built-in dynamic brake resistor, set switch XS to "2" side and use external dynamic brake resistor.

■ When using external dynamic brake

- Note 1) Set switch XS to "2" side.
- Note 2) Make the electromagnetic contactor (MC2) the same as the electromagnetic contactor (MC1) of the main circuit.
- Note 3) Provide an auxiliary contact, and configure protection so that the servo will not turn on in the external sequence if the main contact is welded.
- Note 4) Mount the dynamic brake resistor on incombustible material such as metal.
- Note 5) Install a thermal protector on the dynamic brake resistor and monitor it with the upper I/O, and configure protection so that the servo is not turned on in the external sequence when the thermal protector is operating.
- Note 6) If the upper I/O cannot monitor the thermal protector, input the output of the thermal protector between L2C and DB2 so that the dynamic brake does not operate when the temperature protection works.

■ About motor wiring

- Note 7) This is the terminal symbol of the connector.
- * Power supply for motor brake and connector X4 requires insulation. Do not connect to the same power supply.
- * Do not use built-in dynamic brake and external dynamic brake at the same time.

■ About the Dynamic Brake

The H frame does not have a built-in dynamic brake resistor, so it will be in a free run state when the motor does emergency stop. Use an external dynamic brake resistor if it may cause a machine collision.

■ When using external dynamic brake

- Note 1) Make the electromagnetic contactor (MC2) the same as the electromagnetic contactor (MC1) of the main circuit.
- Note 2) Provide an auxiliary contact, and configure protection so that the servo will not turn on in the external sequence if the main contact is welded.
- Note 3) Mount the dynamic brake resistor on incombustible material such as metal.
- Note 4) Install a thermal protector on the dynamic brake resistor and monitor it with the upper I/O, and configure protection so that the servo is not turned on in the external sequence when the thermal protector is operating.
- Note 5) If the upper I/O cannot monitor the thermal protector, input the output of the thermal protector between L2C and DB2 so that the dynamic brake does not operate when the temperature protection works.

■ About motor wiring

- Note 6) This is the terminal symbol of the connector. () is the terminal symbol of 22.0 kW motor.
- * Do not use built-in dynamic brake and external dynamic brake at the same time.

Connecting the host controller can configure a safety circuit that controls the safety functions.

When not constructing the safety circuit, use the supplied safety bypass plug.

Outline Description of Safe Torque Off (STO)

The safe torque off (STO) function is a safety function that shuts the motor current and turns off motor output torque by forcibly turning off the driving signal of the servo driver internal power transistor. For this purpose, the STO uses safety input signal and hardware (circuit).

When STO function operates, the servo driver turns off the servo ready output signal (S-RDY) and enters STO state. When the driver becomes STO state, front panel displays the "St.". Then, when the driver's state is STO input is off and servo-on input is off, the driver automatically becomes servo-off.

Safety Precautions

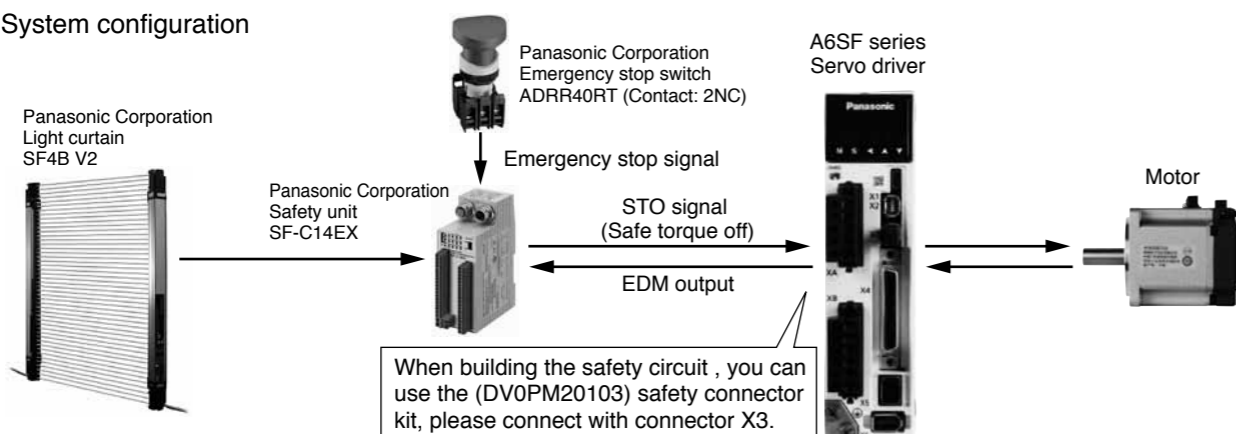

- When using the STO function, be sure to perform equipment risk assessment to ensure that the system conforms to the safety requirements.
- Even while the STO function is working, the following potential safety hazards exist. Check safety in risk assessment.
 - The motor may move when external force (e.g. gravity force on vertical axis) is exerted on it. Provide an external brake, etc., as necessary to secure the motor. Note that the purpose of motor with brake is holding and it cannot be used for braking application.
 - When parameter Pr5.10 Sequence at alarm is set to free run (disable dynamic brake), the motor is free run state and requires longer stop distance even if no external force is applied. Make sure that this does not cause any problem.
- When power transistor, etc., becomes defective, the motor will move to the extent equivalent of 180 electrical angle (max.). Make sure that this does not cause any problem.
- The STO turns off the current to the motor but does not turn off power to the servo driver and does not isolate it. When starting maintenance service on the servo driver, turn off the driver by using a different disconnecting device.
- External device monitor (EDM) output signal is not a safety signal. Do not use it for an application other than failure monitoring.
- Dynamic brake and external brake release signal output are not related to safety function. When designing the system, make sure that the failure of external brake release during STO condition does not result in danger condition.
- When using STO function, connect equipment conforming to the safety standards.

[Connector pin assignment] (Viewed from cable)

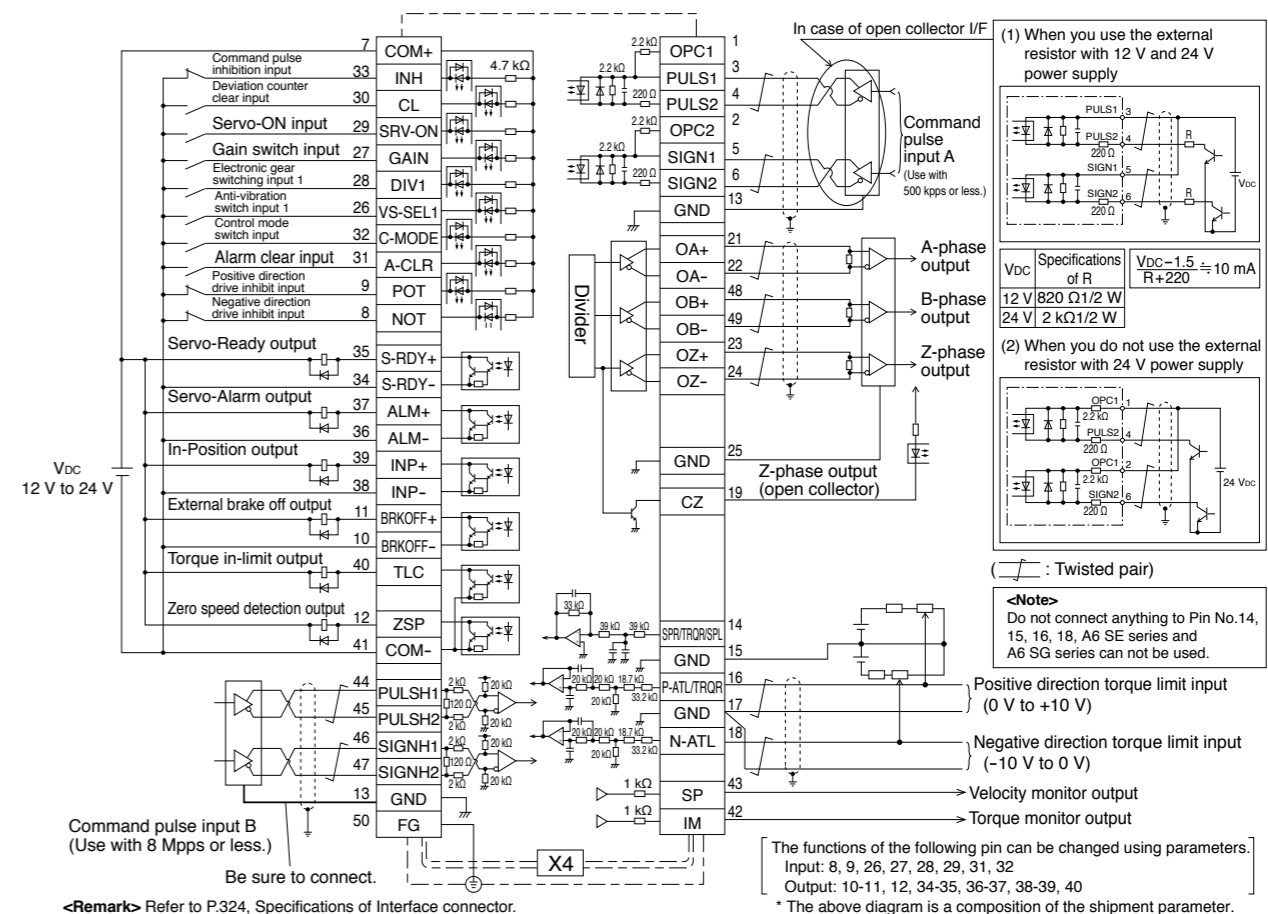

* Do not connect anything to NC.

System configuration

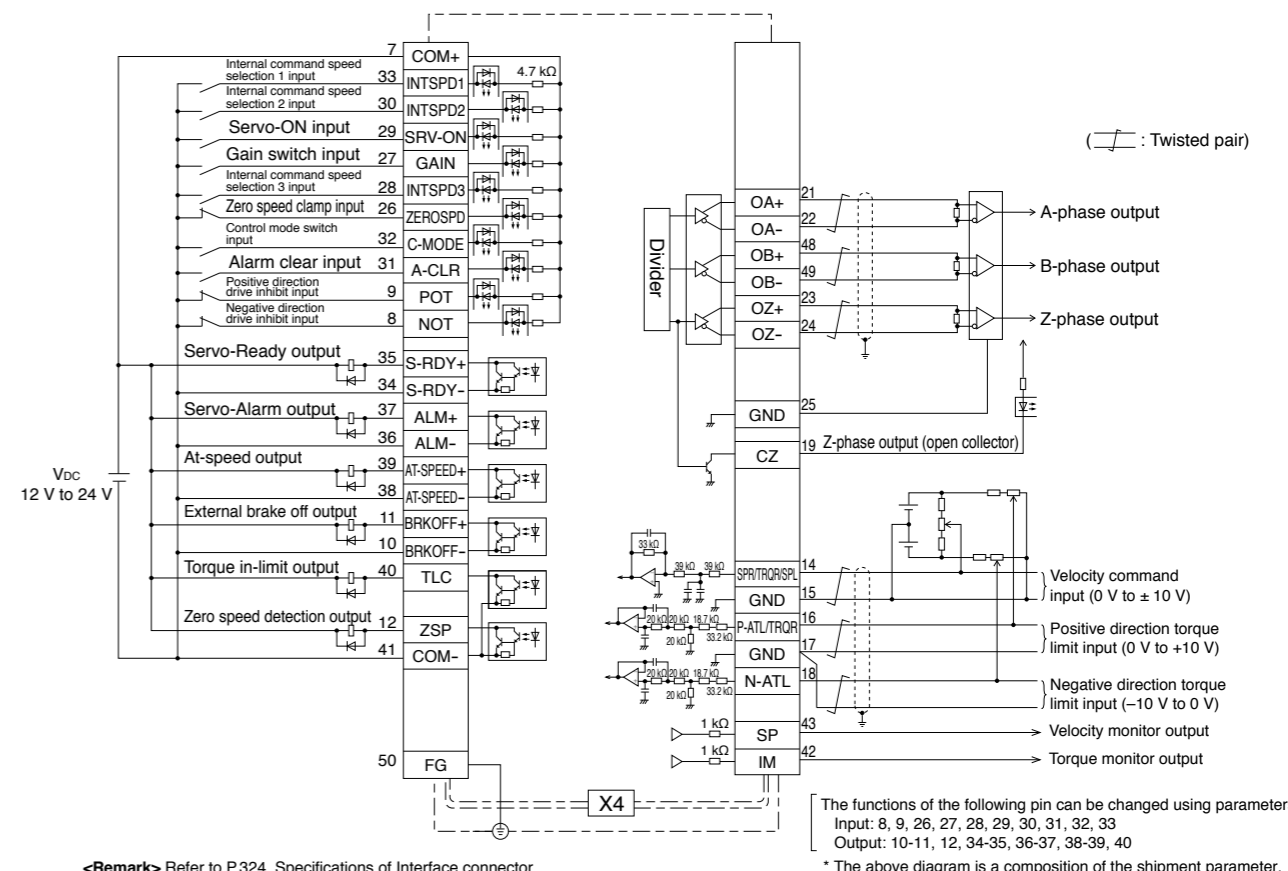

When building the safety circuit, you can use the (DV0PM20103) safety connector kit, please connect with connector X3.

Wiring Example of Position Control Mode

<Remark> Refer to P.324, Specifications of Interface connector.

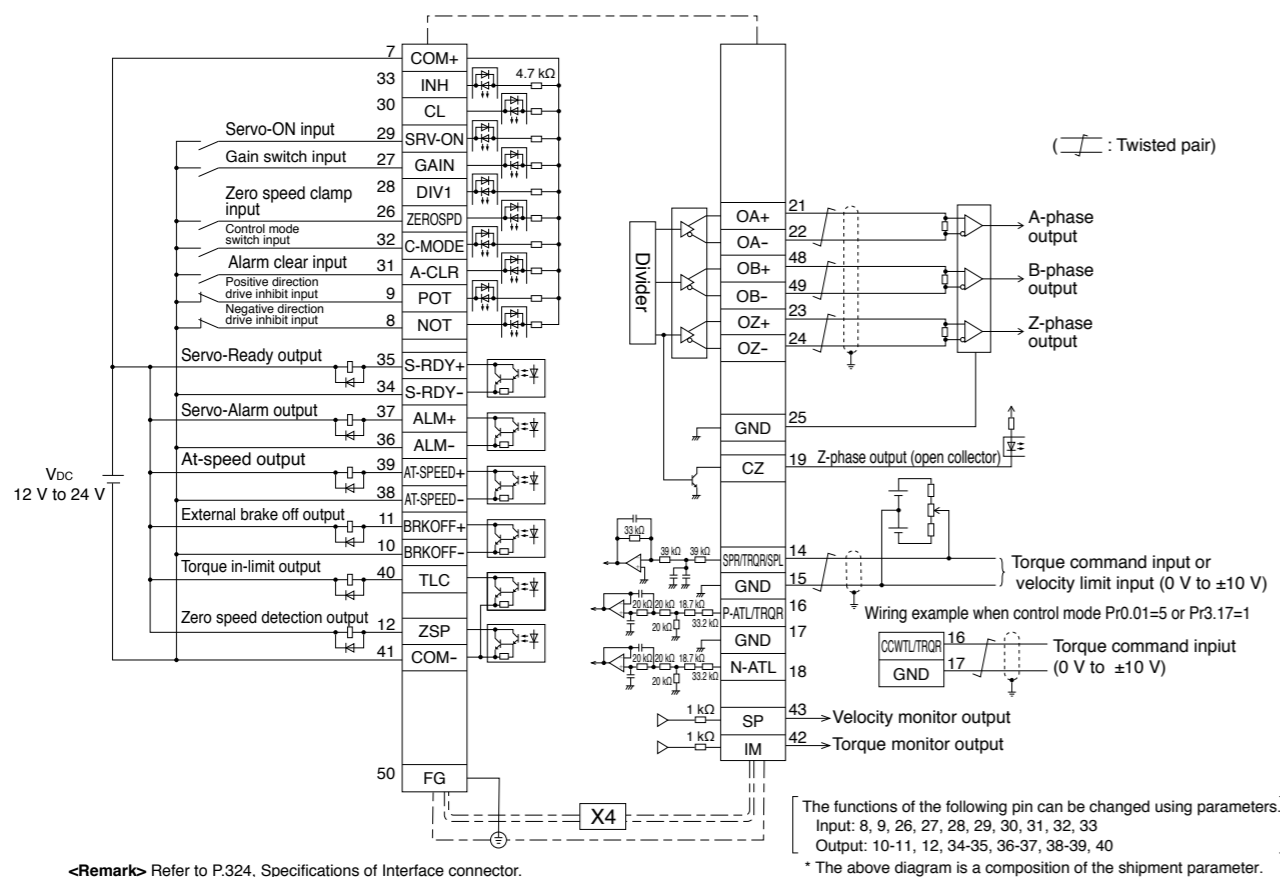

Wiring Example of Velocity Control Mode * Internal velocity command is available only for A6SE and A6SG series

<Remark> Refer to P.324, Specifications of Interface connector.

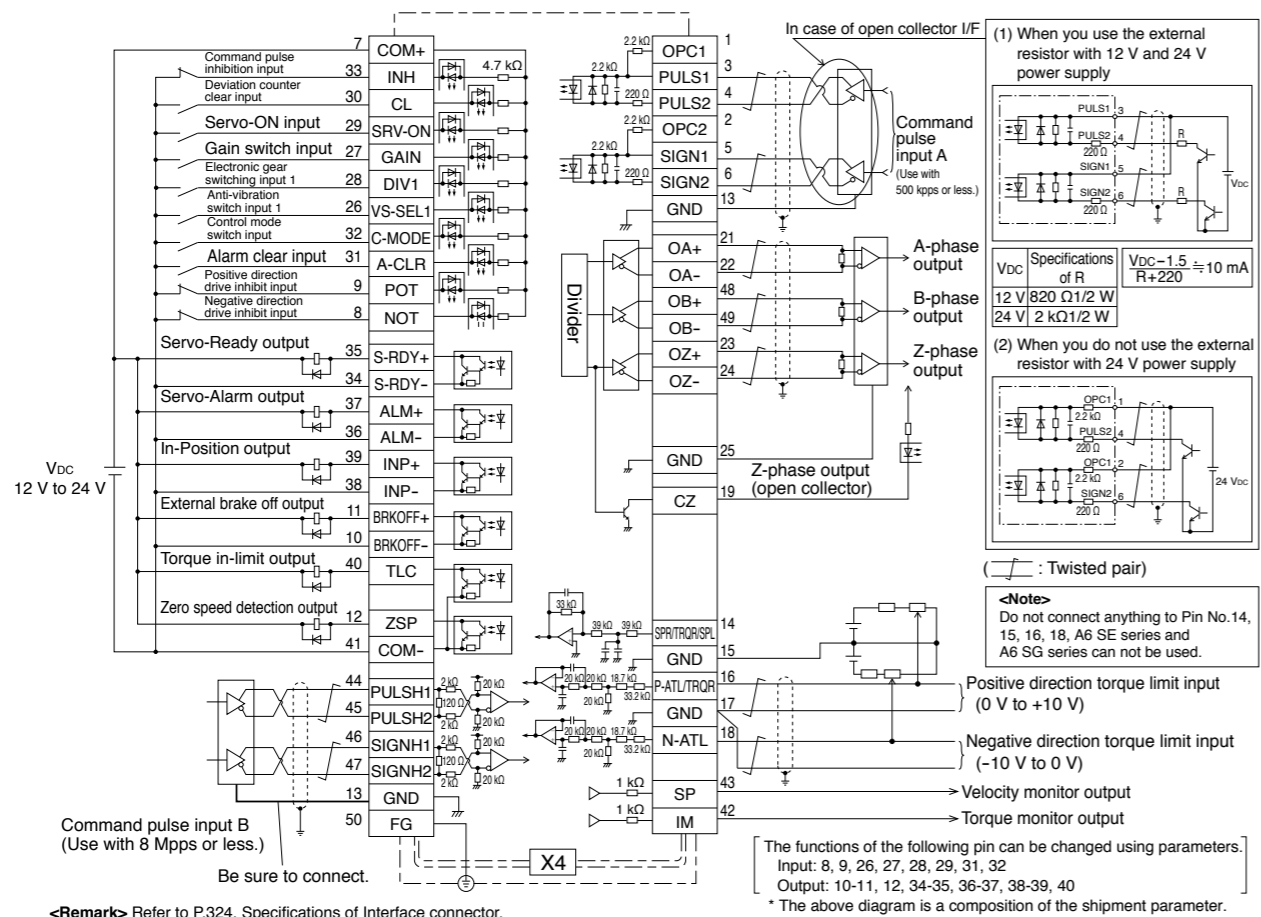

Wiring Example of Torque Control Mode

* Excluding A6SE, A6SG Series

Wiring Example of Full-closed Control Mode

* Excluding A6SE, A6SG Series

		RS485 communication type ^{*2} MADLN11SG
		Basic type ^{*2} MADLN11SE
Frame symbol		A-frame
Power supply capacity	(kVA)	0.4
Rated output	(W)	100
Rated torque	(N·m)	0.32
Continuous stall torque	(N·m)	0.32
Momentary Max. peak torque	(N·m)	0.95
Rated current	(A(rms))	1.6
Max. current	(A(o-p))	6.9
Regenerative brake frequency (times/min) ^{Note)1}	Without option	No limit ^{Note)2}
	DV0P4280	No limit ^{Note)2}
Rated rotational speed	(r/min)	3000
Max. rotational speed	(r/min)	6000
Moment of inertia of rotor (×10 ⁻⁴ kg·m ²)	Without brake	0.048
	With brake	0.051
Recommended moment of inertia ratio of the load and the rotor ^{Note)3}		30 times or less
Rotary encoder specifications ^{*3}		23-bit Absolute
	Resolution per single turn	8388608

• **Brake specifications** (For details, refer to P.305)
(This brake will be released when it is energized.)
(Do not use this for braking the motor in motion.)

Static friction torque (N·m)	0.294 or more
Engaging time (ms)	35 or less
Releasing time (ms) ^{Note)4}	20 or less
Exciting current (DC) (A)	0.30
Releasing voltage (DC) (V)	1 or more
Exciting voltage (DC) (V)	24±1.2

• **Permissible load** (For details, refer to P.304)

During assembly	Radial load P-direction (N)	147
	Thrust load A-direction (N)	88.0
	Thrust load B-direction (N)	117.6
During operation	Radial load P-direction (N)	68.6
	Thrust load A, B-direction (N)	58.8

- For details of Note)1 to Note)4, refer to P.303.
- Dimensions of Driver, refer to P.57.
- *1 □□ in the motor part number represents the motor specifications.
- *2 Basic type and RS485 communication type are "Position control type".
Detail of model designation, refer to P.22.
- *3 When using a rotary encoder as an incremental system (not using multi-turn data), do not connect a battery for absolute encoder.

Torque characteristics (at AC100 V of power voltage <Dotted line represents the torque at 10 % less supply voltage.>)

Read the Instruction Manual carefully and understand all precautions and remarks before using the products.

Specifications

		AC200 V
Motor model ^{*1}	IP67	MDMF752L1 □□
Applicable driver	Model No.	Multifunction type MGDLTC3SF
		RS485 communication type ^{*2} —
		Basic type ^{*2} —
	Frame symbol	G-frame
Power supply capacity	(kVA)	11
Rated output	(W)	7500
Rated torque	(N·m)	47.8
Continuous stall torque	(N·m)	47.8
Momentary Max. peak torque	(N·m)	125
Rated current	(A(rms))	40.2
Max. current	(A(o-p))	154
Regenerative brake frequency (times/min) ^{Note)1}	Without option	No limit ^{Note)2}
	DV0P4285x3	No limit ^{Note)2}
Rated rotational speed	(r/min)	1500
Max. rotational speed	(r/min)	3000
Moment of inertia of rotor (×10 ⁻⁴ kg·m ²)	Without brake	122
	With brake	127
Recommended moment of inertia ratio of the load and the rotor ^{Note)3}		10 times or less
Rotary encoder specifications ^{*3}		23-bit Absolute
	Resolution per single turn	8388608

• **Brake specifications** (For details, refer to P.305)
(This brake will be released when it is energized.)
(Do not use this for braking the motor in motion.)

Static friction torque (N·m)	63.0 or more
Engaging time (ms)	200 or less
Releasing time (ms) ^{Note)4}	80 or less
Exciting current (DC) (A)	1.29
Releasing voltage (DC) (V)	2 or more
Exciting voltage (DC) (V)	24±2.4

• **Permissible load** (For details, refer to P.304)

During assembly	Radial load P-direction (N)	2058
	Thrust load A-direction (N)	980
	Thrust load B-direction (N)	1176
During operation	Radial load P-direction (N)	1176
	Thrust load A, B-direction (N)	490

- For details of Note)1 to Note)4, refer to P.303.
- Dimensions of Driver, refer to P.60.
- *1 □□ in the motor part number represents the motor specifications.
- *2 Basic type and RS485 communication type are "Position control type".
Detail of model designation, refer to P.22.
- *3 When using a rotary encoder as an incremental system (not using multi-turn data), do not connect a battery for absolute encoder.

Torque characteristics (at AC200 V of power voltage <Dotted line represents the torque at 10 % less supply voltage.>)

Rotary encoder specifications ^{*3}		23-bit Absolute
	Resolution per single turn	8388608

• **Brake specifications** (For details, refer to P.305)
(This brake will be released when it is energized.)
(Do not use this for braking the motor in motion.)

Static friction torque (N·m)	25.0 or more
Engaging time (ms)	80 or less
Releasing time (ms) ^{Note)4}	25 or less
Exciting current (DC) (A)	1.29
Releasing voltage (DC) (V)	2 or more
Exciting voltage (DC) (V)	24±2.4

• **Permissible load** (For details, refer to P.304)

During assembly	Radial load P-direction (N)	1666
	Thrust load A-direction (N)	784
	Thrust load B-direction (N)	980
During operation	Radial load P-direction (N)	1176
	Thrust load A, B-direction (N)	490

- For details of Note)1 to Note)4, refer to P.303.
- Dimensions of Driver, refer to P.59.
- *1 □□ in the motor part number represents the motor specifications.
- *2 Basic type and RS485 communication type are "Position control type".
Detail of model designation, refer to P.22.
- *3 When using a rotary encoder as an incremental system (not using multi-turn data), do not connect a battery for absolute encoder.

Torque characteristics (at AC200 V of power voltage <Dotted line represents the torque at 10 % less supply voltage.>)

Dimensions

Motor specifications	Key way shaft/ Round shaft					
	without brake			with brake		
	without oil seal	with oil seal	with protective lip/ with oil seal	without oil seal	with oil seal	with protective lip/ with oil seal
Encoder connector Large size (JL10) type	—	P.199		—	P.199	
Encoder connector Small size (JN2) type	—	P.199		—	P.200	

<Cautions> Reduce the moment of inertia ratio if high speed response operation is required.
Dimensions are subject to change without notice. Contact us or a dealer for the latest information.
Read the Instruction Manual carefully and understand all precautions and remarks before using the products.

Specifications

		AC200 V
Motor model ^{*1}	IP67	MGMF442L1□□
Applicable driver	Model No.	Multifunction type MFDLTB3SF
	RS485 communication type ^{*2}	MFDLNB3SG
	Basic type ^{*2}	MFDLNB3SE
	Frame symbol	F-frame
Power supply capacity	(kVA)	7.0
Rated output	(W)	4400
Rated torque	(N·m)	28.0
Continuous stall torque	(N·m)	28.0
Momentary Max. peak torque	(N·m)	70.0
Rated current	(A(rms))	27.2
Max. current	(A(o-p))	96
Regenerative brake frequency (times/min) ^{Note)1}	Without option	No limit ^{Note)2}
	DV0P4285x2	No limit ^{Note)2}
Rated rotational speed	(r/min)	1500
Max. rotational speed	(r/min)	3000
Moment of inertia of rotor (×10 ⁻⁴ kg·m ²)	Without brake	58.2
	With brake	63.0
Recommended moment of inertia ratio of the load and the rotor ^{Note)3}		10 times or less
Rotary encoder specifications ^{*3}		23-bit Absolute
	Resolution per single turn	8388608

• **Brake specifications** (For details, refer to P.305)
(This brake will be released when it is energized.)
(Do not use this for braking the motor in motion.)

Static friction torque (N·m)	44.1 or more
Engaging time (ms)	150 or less
Releasing time (ms) ^{Note)4}	30 or less
Exciting current (DC) (A)	1.29
Releasing voltage (DC) (V)	2 or more
Exciting voltage (DC) (V)	24±2.4

• **Permissible load** (For details, refer to P.304)

During assembly	Radial load P-direction (N)	1666
	Thrust load A-direction (N)	784
	Thrust load B-direction (N)	980
During operation	Radial load P-direction (N)	1470
	Thrust load A, B-direction (N)	490

- For details of Note)1 to Note)4, refer to P.303.
- Dimensions of Driver, refer to P.59.

★ : Frame-A and B drivers are not equipped with regenerative resistors. When regeneration occurs, please prepare an optional external regenerative resistor.

Note)1 □ : Represents the motor specifications. (refer to "Model designation" P.204.)

Note)2 ◇ : Represents the driver specifications. (refer to "Model designation" P.204.)

Note)3 * * : Represents the cable length (03/3 m, 05/5 m, 10/10 m, 20/20 m). Example. 3 m/MFECA0030EAE

Note)4 Because A6SE series driver (dedicated for position control) does not support the absolute system specification, only incremental system can be used in combination.

Note)5 Please note that a battery is not supplied together with 23-bit absolute encoder cable (with battery box). Please buy the battery part number "DV0P2990" separately.

Note)6 Brake cable and motor cable are required for the motor with brake.

■ About dynamic brake

G frame is built in / external, H frame is external
 Built-in / {external} The standard of the dynamic brake resistance's capability is up to three consecutive emergency stops from the rated speed at the maximum allowable inertia (load inertia moment ratio 10 times the rotor inertia moment). If it is used under more conditions, the resistance may be broken and the dynamic brake may not operate.

Recommended resistance: 1.2 Ω 400 W or more × 3 pieces
 For inquiries: Iwaki Musen Kenkyusho Co.,Ltd. Tel: +81-44-833-4311

Applicable driver	Model No.	Multifunction type MADLT15SF
		RS485 communication type ^{*2} MADLN15SG
		Basic type ^{*2} MADLN15SE
	Frame symbol	A-frame
Power supply capacity	(kVA)	0.5
Rated output	(W)	200
Rated torque	(N·m)	0.64
Continuous stall torque	(N·m)	0.64
Momentary Max. peak torque	(N·m)	1.91
Rated current	(A(rms))	1.5
Max. current	(A(o-p))	6.5
Regenerative brake frequency (times/min) ^{Note)1}	Without option	No limit ^{Note)2}
	DV0P4283	No limit ^{Note)2}
Rated rotational speed	(r/min)	3000
Max. rotational speed	(r/min)	6000
Moment of inertia of rotor (×10 ⁻⁴ kg·m ²)	Without brake	0.14
	With brake	0.17
Recommended moment of inertia ratio of the load and the rotor ^{Note)3}		30 times or less
Rotary encoder specifications ^{*3}		23-bit Absolute
	Resolution per single turn	8388608

• **Brake specifications** (For details, refer to P.305)
(This brake will be released when it is energized.)
(Do not use this for braking the motor in motion.)

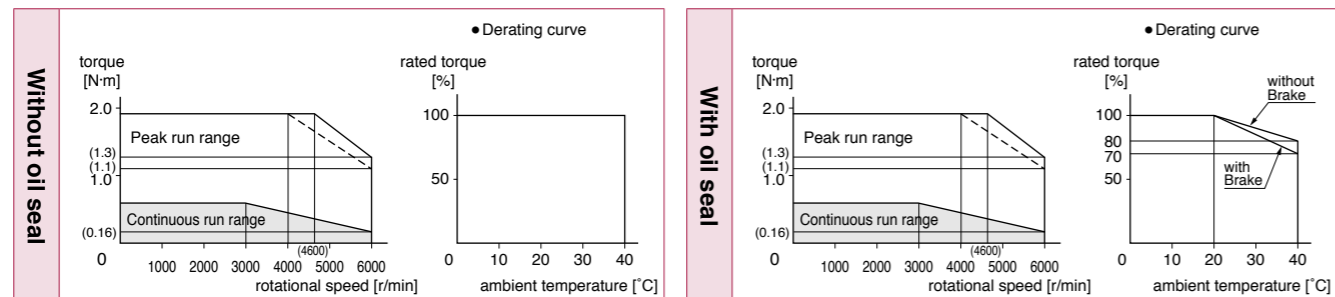

Static friction torque (N·m)	1.27 or more
Engaging time (ms)	50 or less
Releasing time (ms) ^{Note)4}	15 or less
Exciting current (DC) (A)	0.36
Releasing voltage (DC) (V)	1 or more
Exciting voltage (DC) (V)	24±1.2

• **Permissible load** (For details, refer to P.304)

During assembly	Radial load P-direction (N)	392
	Thrust load A-direction (N)	147
	Thrust load B-direction (N)	196
During operation	Radial load P-direction (N)	245
	Thrust load A, B-direction (N)	98.0

- For details of Note)1 to Note)4, refer to P.303.
- Dimensions of Driver, refer to P.57.
- *1 □□ in the motor part number represents the motor specifications.
- *2 Basic type and RS485 communication type are "Position control type".
Detail of model designation, refer to P.204.
- *3 When using a rotary encoder as an incremental system (not using multi-turn data), do not connect a battery for absolute encoder.

Torque characteristics (at AC200 V of power voltage <Dotted line represents the torque at 10 % less supply voltage.>)

Dimensions

Motor specifications	Round shaft/ Key way, center tap shaft					
	without brake			with brake		
	without oil seal	with oil seal	with protective lip/ with oil seal	without oil seal	with oil seal	with protective lip/ with oil seal
Leadwire type (IP65)	P.254			P.254		

<Cautions> Reduce the moment of inertia ratio if high speed response operation is required.
Dimensions are subject to change without notice. Contact us or a dealer for the latest information.
Read the Instruction Manual carefully and understand all precautions and remarks before using the products.
Please avoid the motor, or equipment containing the motor to be distributed to Japan, or other regions through Japan.

Applicable driver	Model No.	Multifunction type MCDLT35SF
		RS485 communication type ^{*2} MCDLN35SG
		Basic type ^{*2} MCDLN35SE
	Frame symbol	C-frame
Power supply capacity	(kVA)	1.8
Rated output	(W)	750
Rated torque	(N·m)	2.39
Continuous stall torque	(N·m)	2.86
Momentary Max. peak torque	(N·m)	8.36
Rated current	(A(rms))	3.8
Max. current	(A(o-p))	18.8
Regenerative brake frequency (times/min) ^{Note)1}	Without option	No limit ^{Note)2}
	DV0P4283	No limit ^{Note)2}
Rated rotational speed	(r/min)	3000
Max. rotational speed	(r/min)	6000
Moment of inertia of rotor (×10 ⁻⁴ kg·m ²)	Without brake	1.56
	With brake	1.66
Recommended moment of inertia ratio of the load and the rotor ^{Note)3}		20 times or less
Rotary encoder specifications ^{*3}		23-bit Absolute
	Resolution per single turn	8388608

• **Brake specifications** (For details, refer to P.305)
(This brake will be released when it is energized.)
(Do not use this for braking the motor in motion.)

Static friction torque (N·m)	3.8 or more
Engaging time (ms)	70 or less
Releasing time (ms) ^{Note)4}	20 or less
Exciting current (DC) (A)	0.42
Releasing voltage (DC) (V)	1 or more
Exciting voltage (DC) (V)	24±2.4

• **Permissible load** (For details, refer to P.304)

During assembly	Radial load P-direction (N)	686
	Thrust load A-direction (N)	294
	Thrust load B-direction (N)	392
During operation	Radial load P-direction (N)	392
	Thrust load A, B-direction (N)	147

- For details of Note)1 to Note)4, refer to P.303.
- Dimensions of Driver, refer to P.58.
- *1 □□ in the motor part number represents the motor specifications.
- *2 Basic type and RS485 communication type are "Position control type".
Detail of model designation, refer to P.204.
- *3 When using a rotary encoder as an incremental system (not using multi-turn data), do not connect a battery for absolute encoder.

Torque characteristics (at AC200 V of power voltage <Dotted line represents the torque at 10 % less supply voltage.>)

Dimensions

Motor specifications	Round shaft/ Key way, center tap shaft					
	without brake			with brake		
	without oil seal	with oil seal	with protective lip/ with oil seal	without oil seal	with oil seal	with protective lip/ with oil seal
Leadwire type (IP65)	P.275	P.275	P.275	P.276	P.276	P.276

<Cautions> Reduce the moment of inertia ratio if high speed response operation is required.
Dimensions are subject to change without notice. Contact us or a dealer for the latest information.
Read the Instruction Manual carefully and understand all precautions and remarks before using the products.
Please avoid the motor, or equipment containing the motor to be distributed to Japan, or other regions through Japan.

Rated torque	(N·m)	8.28	
Continuous stall torque	(N·m)	8.28	
Momentary Max. peak torque	(N·m)	23.3	
Rated current	(A(rms))	9.3	
Max. current	(A(o-p))	37	
Regenerative brake frequency (times/min) ^{Note)1}	Without option	No limit ^{Note)2}	
	DV0P4284	No limit ^{Note)2}	
Rated rotational speed	(r/min)	1500	
Max. rotational speed	(r/min)	3000	
Moment of inertia of rotor (×10 ⁻⁴ kg·m ²)	Without brake	9.16	
	With brake	10.4	
Recommended moment of inertia ratio of the load and the rotor ^{Note)3}		10 times or less	
Rotary encoder specifications ^{*3}		23-bit Absolute	
	Resolution per single turn	8388608	

• **Brake specifications** (For details, refer to P.305)
(This brake will be released when it is energized.)
(Do not use this for braking the motor in motion.)

Static friction torque (N·m)	13.7 or more
Engaging time (ms)	100 or less
Releasing time (ms) ^{Note)4}	50 or less
Exciting current (DC) (A)	0.79
Releasing voltage (DC) (V)	2 or more
Exciting voltage (DC) (V)	24±2.4

• **Permissible load** (For details, refer to P.304)

During assembly	Radial load P-direction (N)	980
	Thrust load A-direction (N)	588
	Thrust load B-direction (N)	686
During operation	Radial load P-direction (N)	686
	Thrust load A, B-direction (N)	196

- For details of Note)1 to Note)4, refer to P.303.
- Dimensions of Driver, refer to P.58.
- *1 □□ in the motor part number represents the motor specifications.
- *2 Basic type and RS485 communication type are "Position control type".
Detail of model designation, refer to P.204.
- *3 When using a rotary encoder as an incremental system (not using multi-turn data), do not connect a battery for absolute encoder.

Torque characteristics (at AC200 V of power voltage <Dotted line represents the torque at 10 % less supply voltage.>)

Dimensions

Motor specifications	Key way shaft/ Round shaft					
	without brake			with brake		
	without oil seal	with oil seal	with protective lip/ with oil seal	without oil seal	with oil seal	with protective lip/ with oil seal
Encoder connector Large size (JL10) type	—	P.289		—	P.289	

<Cautions> Reduce the moment of inertia ratio if high speed response operation is required.
Dimensions are subject to change without notice. Contact us or a dealer for the latest information.
Read the Instruction Manual carefully and understand all precautions and remarks before using the products.
Please avoid the motor, or equipment containing the motor to be distributed to Japan, or other regions through Japan.

MGMF 4.4 kW

Large size connector (JL10) type · with brake · with oil seal/ with protective lip · Key way shaft/ Round shaft

MGMF 5.5 kW

Large size connector (JL10) type · without brake · with oil seal · Key way shaft/ Round shaft

Large size connector (JL10) type · with brake · with oil seal · Key way shaft/ Round shaft

* For motors specifications, refer to P.251, P.252.

Motor Types with Gear Reducer

Reduction ratio	Motor output (W)				Type of reducer
	100	200	400	750	
1/5	●	●	●	●	For high precision
1/9	●	●	●	●	
1/15	●	●	●	●	
1/25	●	●	●	●	

* MQMF 750 W is not prepared.
* MHMF 100 W 1/25, 400 W 1/25 are not prepared.

Efficiency of the gear reducer show the following inclination in relation to output torque and rotational speed.

Specifications of Motor with Gear Reducer

Items	Specifications
Backlash	3 minutes or smaller (initial value) at output shaft of the reducer
Composition of gear	Planetary gear
Gear efficiency	76 % to 87 %
Lubrication	Grease lubrication
Rotational direction at output shaft	Same direction as the motor output shaft
Mounting method	Flange mounting
Permissible moment of inertia of the load (conversion to the motor shaft)	10 times or smaller than rotor moment of inertia of the motor
Enclosure rating	IP44 (at gear reducer)
Ambient temperature	0 °C to 40 °C (free from freezing)
Storage temperature	-20 °C to 65 °C (Max. temperature guarantee: 80 °C for 72 hours free from condensation)
Ambient humidity, Storage humidity	20 %RH to 85 %RH (free from condensation)
Vibration	Lower than 49 m/s ² (5G) at running, 24.5 m/s ² (2.5G) at stall
Impact	Lower than 98 m/s ² (10G)
Altitude	Lower than 1000 m

* For combination of elements of model number, refer to Index P.448.

Model Designation

M Q M F 0 1 1 L 3 1 N

Symbol	Type
MQMF	Middle inertia Flat type 100 W to 400 W
MHMF	High inertia 100 W to 750 W

Symbol	Specifications
01	100 W
02	200 W
04	400 W
08	750 W

Symbol	Series
F	A6 Family

Symbol	Rated output
1	100 V
2	200 V

N: Standard

Symbol	Reduction ratio	Motor output (W)				Type of reducer
		100	200	400	750	
1N	1/5	●	●	●	●	For high precision
2N	1/9	●	●	●	●	
3N	1/15	●	●	●	●	
4N	1/25	●	●	●	●	

* MQMF 750 W is not prepared.
* MHMF 100 W 1/25, 400 W 1/25 are not prepared.

Symbol	Format	Pulse counts	Resolution	Wire
L	Absolute	23-bit	8388608	7

<Note>
When using it as an incremental system (not using multi-turn data), do not connect the battery for absolute encoder.

Symbol	Motor I/F	Shaft		Holding brake	
		Key way	without	with	with

Environmental Conditions

Item	Conditions
Ambient temperature *1	0 °C to 40 °C (free from freezing)
Ambient humidity	20 %RH to 85 %RH (free from condensation*5*6)
Storage temperature *2	-20 °C to 65 °C (Max.temperature guarantee: 80 °C for 72 hours free from condensation*5)
Storage humidity	20 %RH to 85 %RH (free from condensation*5*6)
Vibration	Motor only Lower than 49 m/s ² (5 G) at running, 24.5 m/s ² (2.5 G) at stall*7
Impact	Motor only Lower than 98 m/s ² (10 G)
Enclosure rating (Motor only)	IP65 *3 MSMF, MQMF, MHMF (except rotating portion of output shaft and leadwire end.) (MSMF, MQMF, MHMF In case of leadwire type.)
	IP67 *3*4 IP67 motor (except rotating portion of output shaft and connecting pin part of the motor connector and the encoder connector)
	IP44 *3 Excludes output shaft rotating part, connector connection pin part, and motor lead hole part of terminal box.
Altitude	Lower than 1000 m

- *1 Ambient temperature to be measured at 5 cm away from the motor.
- *2 Permissible temperature for short duration such as transportation.
- *3 These motors conform to the test conditions specified in EN standards (EN60529, EN60034-5). Do not use these motors in application where water proof performance is required such as continuous wash-down operation.
- *4 This condition is applied when the connector mounting screw are tightened to the recommended tightening torque.
- *5 Air containing water vapor will become saturated with water vapor as the temperature falls, causing dew.
- *6 The terminal block of MDMFD22L1 □□ is between 45%RH to 85%RH.
- *7 For motors with rated output capacity of 5.5 kW or more, both motor rotation and stop will be 24.5 m/s² (2.5 G) or less.

<Note>
Initial setup of rotational direction:
positive = CCW and negative = CW.
Pay an extra attention.

IP65 (1000 W or less) <Leadwire type>	IP67 <Connector type>
	

Notes on [Motor specification] page

Note) 1. Regenerative resistors are not built in drivers of A and B frames. When regeneration occurs, prepare an optional external regenerative resistor.

[At AC100 V of power voltage]

Regenerative brake frequency represents the frequency of the motor's stops from the rated speed with deceleration without load.

- If the load is connected, frequency will be defines as $1/(m+1)$, where m =load moment of inertia/rotor moment of inertia.
- When the motor speed exceeds the rated speed, regenerative brake frequency is in inverse proportion to the square of (running speed/rated speed).
- Power supply voltage is AC115 V (at 100 V of the main voltage).
If the supply voltage fluctuates, frequency is in inverse proportion to the square of (Running supply voltage/115) relative to the value in the table.
- When regeneration occurs continuously such cases as running speed frequently changes or vertical feeding, consult us or a dealer.

[At AC200 V of power voltage]

Regenerative brake frequency represents the frequency of the motor's stops from the rated speed with deceleration without load.

- If the load is connected, frequency will be defines as $1/(m+1)$, where m =load moment of inertia/rotor moment of inertia.
- When the motor speed exceeds the rated speed, regenerative brake frequency is in inverse proportion to the square of (running speed/rated speed).
- Power supply voltage is AC230 V (at 200 V of the main voltage).
If the supply voltage fluctuates, frequency is in inverse proportion to the square of (Running supply voltage/230) relative to the value in the table.

- When regeneration occurs continuously such cases as running speed frequently changes or vertical feeding, consult us or a dealer.

Note) 2. If the effective torque is within the rated torque, there is no limit in generative brake.

Note) 3. Consult us or a dealer if the load moment of inertia exceeds the specified value.

Note) 4. Releasing time values represent the ones with DC-cutoff using a varistor.

Permissible Load at Output Shaft

The radial load is defined as a load applied to the output shaft in the right-angle direction. This load is generated when the gear head is coupled to the machine using a chain, belt, etc., but not when the gear head is directly connected to the coupling. As shown in the right figure, the permissible value is determined based on the load applied to the L/2 position of the output shaft. The thrust load is defined as a load applied to the output shaft in the axial direction.

Because the radial load and thrust load significantly affect the life of the bearing, take care not to allow the load during operation to exceed the permissible radial load and thrust load shown in the table below.

Built-in Holding Brake

In the applications where the motor drives the vertical axis, this brake would be used to hold and prevent the work (moving load) from falling by gravity while the power to the servo is shut off.

Use this built-in brake for "Holding" purpose only, that is to hold the stalling status. Never use this for "Brake" purpose to stop the load in motion.

• Output Timing of BRK-OFF Signal

- For the brake release timing at power-on, or braking timing at Servo-OFF/Servo-Alarm while the motor is in motion, refer to the Operating Instructions (Overall).
- With the parameter, Pr4.38 (Setup of mechanical brake action while the motor is in motion), you can set up a time between when the motor enters to a free-run from energized status and when BRK-OFF signal turns off (brake will be engaged), when the Servo-OFF or alarm occurs while the motor is in motion. For details, download a copy of the instruction manual from our website.

<Note>

1. The lining sound of the brake (chattering and etc.) might be generated while running the motor with built-in brake, however this does not affect any functionality.
2. Magnetic flux might be generated through the motor shaft while the brake coil is energized (brake is open). Pay an extra attention when magnetic sensors are used nearby the motor.

● Specifications of Built-in Holding Brake

- The engaging time and releasing time represent the delay time of the brake operation.
- Releasing time values represent the ones with DC-cutoff using a varistor.
- Above values (except static friction torque, releasing voltage and exciting voltage) represent typical values.
- Backlash of the built-in holding brake is kept 2° or smaller at ex-factory point.
- Service life of the number of acceleration/deceleration with the above permissible angular acceleration is more than 10 million times. (Life end is defined as when the brake backlash drastically changes.)
- The motor brake power supply must be different from the power supply for the driver's connectors X1, X2, X3, X4, X5, X6.

Part No.	MFECA0 ** 0EPD	100 mm sq. or more Applicable motor output	0.85 kW to 22.0 kW
Specifications	23-bit absolute encoder When used in incremental system (without battery box) <Large one-touch lock type>		

Title	Part No.	Manufacturer	L (m)	Part No.(ex.)
Connector (Driver side)	3E206-0100 KV	Sumitomo 3M	3	MFECA0030EPD
Shell kit	3E306-3200-008	(or equivalent)	5	MFECA0050EPD
Connector (Motor side)	JL10-6A20-29S-EB	Japan Aviation Electronics Ind.	10	MFECA0100EPD
Cable clamp	JL04-2022CK(09)-R		20	MFECA0200EPD
Cable	0.2 mm ² x3P (6-wire)	Oki Electric Cable Co., Ltd.		

Part No.	MFECA0 ** 0ESD	100 mm sq. or more Applicable motor output	0.85 kW to 22.0 kW
Specifications	23-bit absolute encoder When used in incremental system (without battery box) <Large screwed type>		

Title	Part No.	Manufacturer	L (m)	Part No.(ex.)
Connector (Driver side)	3E206-0100 KV	Sumitomo 3M	3	MFECA0030ESD
Shell kit	3E306-3200-008	(or equivalent)	5	MFECA0050ESD
Connector (Motor side)	N/MS3106B20-29S	Japan Aviation Electronics Ind.	10	MFECA0100ESD
Cable clamp	N/MS3057-12A		20	MFECA0200ESD
Cable	0.2 mm ² x3P (6-wire)	Oki Electric Cable Co., Ltd.		

Part No.	MFECA0 ** 0EPE	100 mm sq. or more Applicable motor output	0.85 kW to 22.0 kW (IP67 motor)
Specifications	23-bit absolute encoder When used in absolute system (with battery box) * <Large one-touch lock type>		

* Battery is not included. Please buy the absolute encoder battery "DV0P2990" separately.

Title	Part No.	Manufacturer	L (m)	Part No.(ex.)
Connector (Driver side)	3E206-0100 KV	Sumitomo 3M	3	MFECA0030EPE
Shell kit	3E306-3200-008	(or equivalent)	5	MFECA0050EPE
Connector (Motor side)	JL10-6A20-29S-EB	Japan Aviation Electronics Ind.	10	MFECA0100EPE
Cable clamp	JL04-2022CK(09)-R		20	MFECA0200EPE
Cable	0.2 mm ² x3P (6-wire)	Oki Electric Cable Co., Ltd.		

Part No.	MFECA0 ** 0ESE	100 mm sq. or more Applicable motor output	0.85 kW to 22.0 kW (IP67 motor)
Specifications	23-bit absolute encoder When used in absolute system (with battery box) * <Large screwed type>		

* Battery is not included. Please buy the absolute encoder battery "DV0P2990" separately.

Title	Part No.	Manufacturer	L (m)	Part No.(ex.)
Connector (Driver side)	3E206-0100 KV	Sumitomo 3M	3	MFECA0030ESE
Shell kit	3E306-3200-008	(or equivalent)	5	MFECA0050ESE
Connector (Motor side)	N/MS3106B20-29S	Japan Aviation Electronics Ind.	10	MFECA0100ESE
Cable clamp	N/MS3057-12A		20	MFECA0200ESE
Cable	0.2 mm ² x4P (8-wire)	Oki Electric Cable Co., Ltd.		

Part No.	MFECA0 ** 0ETD	100 mm sq. or more Applicable motor output	0.85 kW to 22.0 kW (IP67 motor)
Specifications	23-bit absolute encoder When used in incremental system (without battery box) <Small one-touch lock type>		

Title	Part No.	Manufacturer	L (m)	Part No.(ex.)
Connector (Driver side)	3E206-0100 KV	Sumitomo 3M	3	MFECA0030ETD
Shell kit	3E306-3200-008	(or equivalent)	5	MFECA0050ETD
Connector (Motor side)	JN2DS10SL1-R	Japan Aviation Electronics Ind.	10	MFECA0100ETD
Connector pin	JN1-22-22S-PKG100		20	MFECA0200ETD
Cable	0.2 mm ² x3P (6-wire)	Oki Electric Cable Co., Ltd.		

Part No.	MFECA0 ** 0ETE	100 mm sq. or more Applicable motor output	0.85 kW to 22.0 kW (IP67 motor)
Specifications	23-bit absolute encoder When used in absolute system (with battery box) * <Small one-touch lock type>		

* Battery is not included. Please buy the absolute encoder battery "DV0P2990" separately.

Title	Part No.	Manufacturer	L (m)	Part No.(ex.)
Connector (Driver side)	3E206-0100 KV	Sumitomo 3M	3	MFECA0030ETE

Connector	JN4FT02SJMR	Japan Aviation Electronics Ind.	3	MFMCB0030PJT
Connector pin	ST-TMH-S-C1B-3500	Electronics Ind.	5	MFMCB0050PJT
Nylon insulated round terminal	N1.25-M4	J.S.T Mfg. Co., Ltd.	10	MFMCB0100PJT
Cable	AWG22 2-wire (φ4.3)	Hitachi Cable, Ltd.	20	MFMCB0200PJT

Cable for Interface

Part No.	DV0P4360
----------	-----------------

[Unit: mm]

This 2 m connector cable contains AWG28 conductors.

• Table for wiring

Pin No.	color	Pin No.	color	Pin No.	color	Pin No.	color	Pin No.	color
1	Orange (Red1)	11	Orange (Black2)	21	Orange (Red3)	31	Orange (Red4)	41	Orange (Red5)
2	Orange (Black1)	12	Yellow (Black1)	22	Orange (Black3)	32	Orange (Black4)	42	Orange (Black5)
3	Gray (Red1)	13	Gray (Red2)	23	Gray (Red3)	33	Gray (Red4)	43	Gray (Red5)
4	Gray (Black1)	14	Gray (Black2)	24	Gray (Black3)	34	White (Red4)	44	White (Red5)
5	White (Red1)	15	White (Red2)	25	White (Red3)	35	White (Black4)	45	White (Black5)
6	White (Black1)	16	Yellow (Red2)	26	White (Black3)	36	Yellow (Red4)	46	Yellow (Red5)
7	Yellow (Red1)	17	Yel (Blk2)/Pink (Blk2)	27	Yellow (Red3)	37	Yellow (Black4)	47	Yellow (Black5)
8	Pink (Red1)	18	Pink (Red2)	28	Yellow (Black3)	38	Pink (Red4)	48	Pink (Red5)
9	Pink (Black1)	19	White (Black2)	29	Pink (Red3)	39	Pink (Black4)	49	Pink (Black5)
10	Orange (Red2)	20	-	30	Pink (Black3)	40	Gray (Black4)	50	Gray (Black5)

<Remarks>
Color designation of the cable e.g.) Pin-1
Cable color : Orange
(Red1) : One red dot on the cable

<Caution>

Cable pin No. 50 is not connected to the connector shell (housing) or shielded wire (net wire).
Pin No. 50 of the Driver is connected to the shell (housing) of the connector.
The shielded wire (net wire) of the cable is connected to the shell (housing) of the connector of the cable, and by connecting the connector of the optional cable to the Driver, pin No. 50 of the cable and the shielded wire (net wire) of the cable gets connected via the Driver.

Interface Conversion Cable

Part No.	DV0P4120, 4121, 4130, 4131, 4132
----------	---

Interface cables for old product (XX series or V series) can be connected to the current product by using the connector conversion cable shown below.

DV0P4120	MINAS XX → A6 series (A5II, A5, A4, A series) for position control/ velocity control
DV0P4121	MINAS XX → A6 series (A5II, A5, A4, A series) for torque control
DV0P4130	MINAS V → A6 series (A5II, A5, A4, A series) for position control
DV0P4131	MINAS V → A6 series (A5II, A5, A4, A series) for velocity control
DV0P4132	MINAS V → A6 series (A5II, A5, A4, A series) for torque control

* For details of wiring, contact our sales department.

Converts 36-pin configuration to 50-pin.

<DV0P4120, 4121>

<DV0P4130, 4131, 4132>

Connector Kit for Communication Cable (for RS485, RS232) (Excluding A6SE, A6NE, A6BE Series)

Part No.	DV0PM20102
----------	------------

• Components

Title	Part No.	Manufacturer	Note
Connector	CIF-PCNS08KK-072R	J.S.T Mfg. Co., Ltd.	For Connector X2 (8-pins)

• Pin disposition of connector, connector X2

Shell: FG
 <Remarks>
 Do not connect anything to NC.

• Dimensions

Connector Kit for Safety (Excluding A6SE, A6SG, A6NE, A6BE Series)

Part No.	DV0PM20103
----------	------------

• Components

Title	Part No.	Manufacturer	Note
Connector	CIF-PCNS08KK-071R	J.S.T Mfg. Co., Ltd.	For Connector X3 (8-pins)

• Pin disposition of connector, connector X3

Shell: FG
 <Remarks>
 Do not connect anything to NC.

• Dimensions

Safety bypass plug (Excluding A6SE, A6SG, A6NE, A6BE Series)

Part No.	DV0PM20094
----------	------------

• Components

Title	Part No.	Manufacturer	Note
Connector	CIF-PB08AK-GF1R	J.S.T Mfg. Co., Ltd.	For Connector X3

• Internal wiring (Wiring of the following has been applied inside the plug.)

• Dimensions (Resin color : black)

<Remarks>
 • For the crimping tools required for cable production, please check the manufacturer's website or contact the manufacturer. For manufacturer inquiries, refer to P.347 "Peripheral Device Manufacturers List".

Connector Kit for Interface

Part No.	DV0P4350
----------	----------

• Components

Title	Part No.	Number	Manufacturer	Note
Connector	10150-3000PE	1	Sumitomo 3M (or equivalent)	For Connector X4 (50-pins)
Connector cover	10350-52A0-008	1		

• Pin disposition (50 pins) (viewed from the soldering side)

- 1) Check the stamped pin-No. on the connector body while making a wiring.
- 2) For the function of each signal title or its symbol, refer to the operating manual.
- 3) Do not connect anything to NC pins in the above table.

Connector Kit for External Scale (Excluding A6SE, A6SG, A6NE, A6BE Series)

Part No.	DV0PM20026
----------	------------

• Components

Title	Part No.	Manufacturer	Note
Connector	MUF-PK10K-X	J.S.T Mfg. Co., Ltd.	For Connector X5 (10-pins)

• Pin disposition of connector, connector X5

• Dimensions

Connector Kit for Encoder

Part No.	DV0PM20010
----------	------------

• Components

Title	Part No.	Manufacturer	Note
Connector (Driver side)	3E206-0100 KV	Sumitomo 3M (or equivalent)	For Connector X6
Shell kit	3E306-3200-008		

• Pin disposition of connector, connector X6

• Dimensions

<Remarks>
 Connector X1: use with commercially available cable.
 • Configuration of connector X1: USB mini-B

Connector Kit for Power Supply Input

Part No. DV0PM20032 (For A-frame to D-frame: Single row type) ● Please refer to the Dimensions of driver P.57 for connector XA.

• Components

Title	Part No.	Number	Manufacturer	Note
Connector	05JFAT-SAXGF	1	J.S.T Mfg. Co., Ltd.	For Connector XA
Handle lever	J-FAT-OT	2		

Part No. DV0PM20033 (For A-frame to D-frame: Double row type)

• Components

Title	Part No.	Number	Manufacturer	Note
Connector	05JFAT-SAXGSA-C	1	J.S.T Mfg. Co., Ltd.	For Connector XA
Handle lever	J-FAT-OT	2		

• Dimensions

Driver part No.	Power supply	Rated input current
MADL * 01 * *	Single phase 100 V	1.7 A
MADL * 11 * *	Single phase 100 V	2.0 A
MADL * 05 * *	Single phase/3-phase 200 V	1.6 A/0.9 A
MADL * 15 * *	Single phase/3-phase 200 V	2.0 A/1.1 A
MBDL * 21 * *	Single phase 100 V	4.5 A
MBDL * 25 * *	Single phase/3-phase 200 V	3.7 A/2.1 A
MCDL * 31 * *	Single phase 100 V	7.0 A
MCDL * 35 * *	Single phase/3-phase 200 V	6.4 A/3.4 A
MDDL * 45 * *	Single phase/3-phase 200 V	7.9 A/4.6 A
MDDL * 55 * *	Single phase/3-phase 200 V	13.6 A/7.2 A

* When connection multiple axes in series, make sure the sum of the current value does not exceed the rated current (11.25 A) of DV0PM20033.

Remarks

When using drivers MDDL * 55 * * in single-phase power supply, do not use DV0PM20033.

* MSMF092L1□1

• Components

Title	Part No.	Number	Manufacturer	Note
Connector	JN4FT02SJM-R	1	Japan Aviation Electronics Ind.	For brake cable
Socket contact	ST-TMH-S-C1B-3500	2		

• Pin disposition of connector for brake cable

[Direction of motor shaft]

[Opposite direction of motor shaft]

<Remarks>

Secure the gasket in place without removing it from the connector. Otherwise, the degree of protection of IP67 will not be guaranteed.

Battery for Absolute Encoder

Battery for Absolute Encoder

Part No.	DV0P2990
----------	----------

- Lithium battery: 3.6 V 2000 mAh

<Caution>

This battery is categorized as hazardous substance, and you may be required to present an application of hazardous substance when you transport by air (both passenger and cargo airlines).

Battery Box for Absolute Encoder *

* Battery is not included. Please buy the absolute encoder battery "DV0P2990" separately.

Part No.	DV0P4430
----------	----------

When making a cable for 23-bit absolute encoder by yourself

When you make your own cable for 23-bit absolute encoder, connect the optional battery for absolute encoder, DV0P2990 as per the wiring diagram below. Connector of the battery for absolute encoder shall be provided by customer as well.

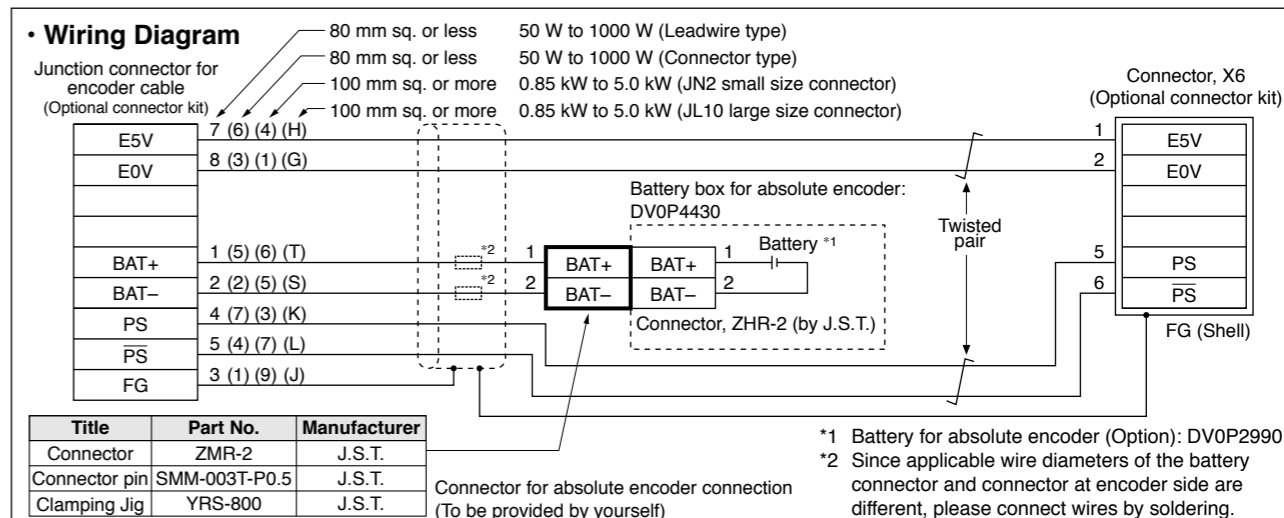

<Caution>

Install and fix the battery securely. If the installation and fixing of the battery is not appropriate, it may cause the wire breakdown or damage of the battery.

Refer to the instruction manual of the battery for handling the battery.

• Installation Place of Battery

- 1) Indoors, where the products are not subjected to rain or direct sun beam.
- 2) Where the products are not subjected to corrosive atmospheres such as hydrogen sulfide, sulfurous acid, chlorine, ammonia, chloric gas, sulfuric gas, acid, alkaline and salt and so on, and are free from splash of inflammable gas, grinding oil, oil mist, iron powder or chips and etc.
- 3) Well-ventilated and humid and dust-free place.
- 4) Vibration-free place

• Wiring Diagram

Title	Part No.	Manufacturer
Connector	ZMR-2	J.S.T.
Connector pin	SMM-003T-P0.5	J.S.T.
Clamping Jig	YRS-800	J.S.T.

*1 Battery for absolute encoder (Option): DV0P2990
*2 Since applicable wire diameters of the battery connector and connector at encoder side are different, please connect wires by soldering.

* For application, refer to P.29 to P.42 and P.205 to P.210 "Table of Part Numbers and Options".

Harmonic restraint

Harmonic restraint measures are not common to all countries. Therefore, prepare the measures that meet the requirements of the destination country. When installing a product for Japan, refer to the instruction manual available on our website.

*1 Power with which the driver can be used without activating the built-in thermal protector.

A built-in thermal fuse and a thermal protector are provided for safety.

The circuit should be so designed that the power supply will be turned off as the thermal protector operates.

The built-in thermal fuse blows depending on changes in heat dissipation condition, operating temperature limit, power supply voltage or load.

Mount the regenerative resistor on a machine operating under aggressive regenerating condition (high power supply voltage, large load inertia, shorter deceleration time, etc.) and make sure that the surface temperature will not exceed 100 °C.

*2 If the wind speed is 1m / s by the fan.

Frame	Power supply	
	Single phase, 100 V	Single phase, 200 V 3-phase, 200 V
A	DV0P4280	DV0P4281 (100 W or less) DV0P4283 (200 W)

F		DV0P4285 x 2 in parallel
G		DV0P4285 x 3 in parallel
H		DV0P4285 x 6 in parallel

DV0P4284

DV0P4285

<Caution when using external regenerative resistor>

Regenerative resistor gets very hot.

Configure a circuit so that a power supply shuts down when built-in thermal protector of the regenerative resistor works. Because it is automatic reset thermal protector, please apply a self-holding circuit to the outside in order to maintain safety in case of sudden activation. During the failure of the driver, the surface temperature of the regenerative resistor may exceed the operating temperature before thermal protector starts to work. Built-in thermal fuse of regenerative resistor is intended to prevent from ignition during the failure of the driver and not intended to suppress the surface temperature of the resistor.

- Be attached the regenerative resistance to non-combustible material such as metal.
- Built-in thermal fuse of regenerative resistor is intended to prevent from ignition during the failure of the driver and not intended to suppress the surface temperature of the resistor.
- Do not install the regenerative resistor near flammable materials.

Daisy Chain (Excluding A6SE, A6NE, A6BE Series)

Part No. **DV0PM24610**

• Components

Title	Part No.	Manufacturer	Note
Connector	CIF-PCNS08KK-072R	J.S.T Mfg. Co., Ltd.	For Connector X2 (2-pins)
Cable	3-core cable with shield	—	Core diameter AWG24

• Pin disposition of connector, connector X2

(Viewed from cable)

<Remarks>

- Do not connect anything to NC.
- The braided wire of the cable is connected to the shell (housing) of the connector.

Pursuit of ultimate real-time processing

Pursuit of ultimate real-time processing

● Max. 4 Mpps, when using AB-phase external scale

Multifunctional capabilities to match various needs

- ◎ Supports all positions, speeds and torque modes (w/built-in positioning function)
- ◎ High-precision position latch and comparison
- ◎ Communication cycle can be set to any time between 2 ms and 62.5 μ s.

● Easy setup with setup support software "PANATERM".

Simple network

- ◎ Satisfies both high performance and low cost requirements
- ◎ Synchronization established by communication IC
- ◎ Easier development of compatible equipment

* For options other than for Interface cable and connector kit for interface, see P.29 to P.42.

● Realtime Express and RTEX are registered trademarks of Panasonic Corporation.

● The "Conventional I/F" used in this document means a pulse train and analog I/F.

Wire-saving

Wire-saving reduces various troubles relating to wires. The cables used are widely available Ethernet cables, which are easy to obtain and inexpensive.

Maximum length of the node-to-node cable is 100 m.

Flexibility increases in the layout of an upper controller and servo motors. The RTEXs can also support large-scale systems.

Configurable parameter settings

Upper controllers can configure servo parameters. This enables parameters to be configured automatically instead of by human at installation.

Real time monitoring is enabled.

Upper controllers can monitor various information, such as position, speed, and torque, etc. in real time. Since alarm codes can also be read out, analysis can be performed promptly at trouble occurrence.

Up to 32 axes can be controlled.

In comparison with conventional I/Fs, the number of axes increases that can be controlled by next upper controllers.

* If devices other than servo motors are also connected, up to 32 nodes can be connected as entire slaves including the servo motors. Actual number of controllable axes depends on the specification of an upper controller.

Profile position mode is supported

Profile position mode is supported for PTP control as well as cyclic position, speed, and torque. The processing done by upper controllers can be simplified.

High synchronization capability among axes

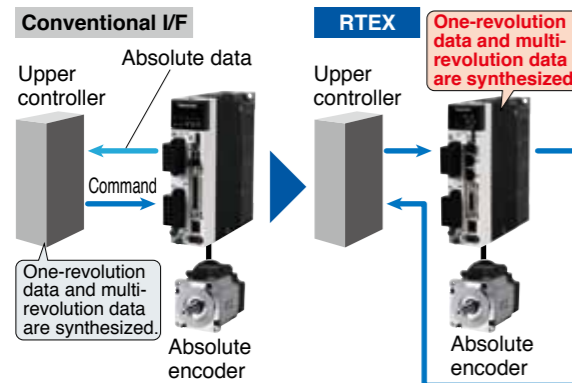

Upper controllers synchronize with entire servo motor axes at high accuracy. With the synchronization capability higher than that of conventional I/F, the RTEX is best suitable for machine tools, robots, gantry systems, and others.

* Interpolation depends on the specification of upper controllers. This is not the function of individual servo motor.

Absolute system can easily be built.

Conventional I/F requires an additional wire to transmit absolute data, while the RTEX doesn't. Each servo motor synthesizes one-revolution data and multi-revolution data to produce an actual position, so that the amount of work to be done by an upper controller is decreased.

High resolution command is enabled

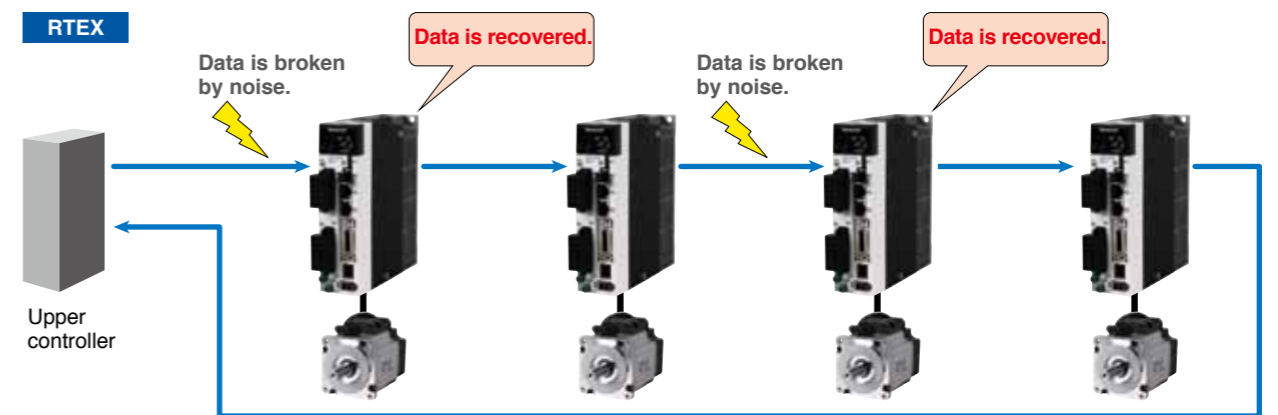

The position command rate of max. 8 Mpps* in a pulse train I/F is improved to 4 Gpps* in the RTEX. Vibrations are reduced due to a smooth command sent to a servo motor using the advantage of the high-resolution encoder.

* Max. 8 Mpps is a rate when A6 servo driver is used. Max. 4 Gpps is a rate when A6N servo driver is used.

High noise-proof property

With a patented error correction function, noise-proof property is at least 2.5 KV. This conforms to IEC61000-4-4 standard.

* The error correction function has a limit. Unrecovered broken data causes a communication error.

MDMF (Small size JN2 type) 1500 r/min Middle inertia IP67 ³	3-phase 200 V	7500	MDMF752L1 □ 5	MDDLTC3NF	G-frame	Approx. 11 kVA
		11000	MDMFC12L1 □ 5	MHDLTE3NF		
		15000	MDMFC52L1 □ 5	MHDLTE3NF		
		22000 ^{*3}	MDMFD22L1 □ 5	MHDLTF3NF		
MGMF (Small size JN2 type) [Low speed/ High torque type] 1500 r/min Middle inertia IP67	3-phase 200 V	5500	MGMF552L1 □ 5	MDDLTC3NF	G-frame	Approx. 8.5 kVA
MHMF (Small size JN2 type) 1500 r/min High inertia IP67	3-phase 200 V	7500	MHMF752L1 □ 5	MDDLTC3NF	G-frame	Approx. 11 kVA

□ ☆ * : For more information, refer to "Model Designation" on P.353.

*1: Encoder connector (Large size JL10)

*2: Encoder connector (Small size JN2)

*3: 22.0 kW motor is IP44.

Basic Specifications	Input power	100 V	Main circuit	Single phase	100 V ^{+10 %} _{-15 %}	to 120 V ^{+10 %} _{-15 %}	50 Hz / 60 Hz	
			Control circuit	Single phase	100 V ^{+10 %} _{-15 %}	to 120 V ^{+10 %} _{-15 %}	50 Hz / 60 Hz	
		200 V	Main circuit	A-frame to D-frame	Single/3-phase	200 V ^{+10 %} _{-15 %}	to 240 V ^{+10 %} _{-15 %}	50 Hz / 60 Hz
				E-frame to H-frame	3-phase	200 V ^{+10 %} _{-15 %}	to 240 V ^{+10 %} _{-15 %}	50 Hz / 60 Hz
			Control circuit	A-frame to D-frame	Single phase	200 V ^{+10 %} _{-15 %}	to 240 V ^{+10 %} _{-15 %}	50 Hz / 60 Hz
				E-frame to H-frame	Single phase	200 V ^{+10 %} _{-15 %}	to 240 V ^{+10 %} _{-15 %}	50 Hz / 60 Hz
	Environment	temperature	Ambient temperature: 0 °C to 55 °C (free from freezing) Storage temperature: -20 °C to 65 °C (Max.temperature guarantee: 80 °C for 72 hours free from condensation ^{*1})					
		humidity	Both operating and storage : 20 %RH to 85 %RH (free from condensation ^{*1})					
		Altitude	Lower than 1000 m					
		Vibration	5.88 m/s ² or less, 10 Hz to 60 Hz					
	Control method		IGBT PWM Sinusoidal wave drive					
	Encoder feedback		23-bit (8388608 resolution) absolute encoder, 7-wire serial * When using it as an incremental system (not using multi-turn data), do not connect the battery for absolute encoder. Parameter Pr. 0.15 must be set to "1" (factory settings).					
	External scale feedback		A/B phase, homing signal differential input. Serial communication is also supported. Manufacturers that support serial communication scale: Fagor Automation S.Coop., HEIDENHAIN, Magnescale Co., Ltd., Mitutoyo Corporation Nidec Sankyo Corporation, Renishaw plc					
	Interface connector	Control signal	Input	Each 8 input can be assigned by the parameter.				
			Output	Each 3 output can be assigned by the parameter.				
Analog signal		Output	2 outputs for analog monitors 1 and 2					
Pulse signal		Output	Line driver output for encoder pulses (A/B phase signal) or external scale pulses.					
Communication	Realtime Express (RTEX)	Communication for transmission of a real-time operation command, the parameter setting, or the status monitoring.						
	USB	USB interface to connect to computers (setup support software PANATERM) for parameter setting or status monitoring.						
Safety terminal		Terminal to support safety function.						
Front panel		(1) 7 segment LED (double digits) (2) Network status LED(LINK,COM) (3) Rotary switch for node address setting (4) Analog monitor output(Analog monitors 1 and 2)						
Regeneration		Size A, B, G and H: Without built-in regenerative resistor (use external resistor) Size C to F: Built-in regenerative resistor (External regenerative resistor is also available)						
Dynamic brake		A to G frame: built-in H frame: External resistor only						
Control mode		(1) Semi-closed control Position control: Profile position control (PP), Cyclic position control (CP) Velocity control: Cyclic velocity control (CV) Torque control: Cyclic torque control (CT) (2) Full-closed control Position control: Profile position control (PP), Cyclic position control (CP) • The two modes, [1] and [2] above are switched by parameters. • Switch PP/CP/CV/CT mode according to the RTEX communication command.						

*1 Air containing water vapor will become saturated with water vapor as the temperature falls, causing dew.

Position control	Control input		Positive direction drive inhibit input, Negative direction drive inhibit, Latch signal, Near home position, etc				
	Control output		Positioning completion etc.				
	Position command input	Input mode	Command type by RTEX command				
		Smoothing filter	Either a primary delay filter or a FIR type filter can be selected against command input.				
	Damping control		Available (Up to 3 frequency settings,out of 4 settings in total,can be used simultaneously.)				
	Model type damping filter		Available (2 filter available used simultaneously)				
	Feed forward function		Available (speed/torque)				
	Load variation suppression control		Available				
	Gain 3 switching function		Available				
	Quadrant glitch inhibit function		Available				
	Two-degree-of-freedom control mode		Available				
	Motor operatable setup function		Available				
	External scale position information monitor		Available				
	Other available functions		Friction torque compensation, Torque limit switching function, Torque saturation protection function, Single-turn absolute function, Continuous rotating absolute encoder function				
	Speed control	Control input		Positive direction drive inhibit input , Negative direction drive inhibit, Latch signal, etc			
Control output		At speed etc.					
Position command input		Input mode	Command type by RTEX command				
		Soft start/slowdown function	0 s to 10 s / 1000 r/min Acceleration and deceleration can be set separately. S-curve acceleration/deceleration is also available.				
Feed forward function		Available (torque)					
Load variation suppression control		Available					
Two-degree-of-freedom control mode		Available (standard type)					
External scale position information monitor		Available					
Other available functions		Friction torque compensation, Torque limit switching function, Torque saturation protection function, Single-turn absolute function, Continuous rotating absolute encoder function					
Torque control	Control input		Positive direction drive inhibit input, Negative direction drive inhibit, Latch signal, etc				
	Control output		At speed etc.				
	Position command input	Input mode	Command type by RTEX command				
		Speed limit function	Speed limit value can be set by parameter. (Switched by RTEX command.)				
	External scale position information monitor		Available				
Other available functions		Single-turn absolute function Continuous rotating absolute encoder function					
Full-closed control	Control input		Positive direction drive inhibit input , Negative direction drive inhibit, Latch signal, Near home position , etc				
	Control output		Positioning completion etc.				
	Position command input	Input mode	Command type by RTEX command				
		Smoothing filter	Either a primary delay filter or a FIR type filter can be selected against command input.				
	Setting range of external scale division/multiplication.		1/40 times to 125200 times Although the ratio of the encoder pulse (numerator) and external scale pulse (denominator) can be set anywhere between the range of 1 to 2 ²³ for the numerator and 1 to 2 ²³ for the denominator, Please use within the range indicated above.				
	Damping control		Available(Up to 3 frequency settings,out of 4 settings in total,can be used simultaneously.)				
	Feed forward function		Available (speed/torque)				
	Load variation suppression control		Available				
	Gain 3 switching function		Available				
	Hybrid vibration suppression function		Available				
	Quadrant glitch inhibit function		Available				
	Two-degree-of-freedom control mode		Available (standard type)				
	Motor operatable setup function		Available				
	External scale position information monitor		Available				
	Other available functions		Friction torque compensation, Torque limit switching function, Torque saturation protection function				
Common	Electronic gear ratio setting		Applicable scaling ratio: 1/1000 to 8000 Although any value of 1 to 2 ³⁰ (numerator) and any value of 1 to 2 ³⁰ (denominator) can be used,resulting value should be within the range shown above.				
	Auto tuning		Identifies the load inertia real-time and automatically sets up the gain that meets the stiffness setting when the motor is running with upper and internal operation commands.				
	Notch filter		Available (5 filters available)				
	Gain switching function		Available				
	2-step torque filter		Available				
	Position comparison output function		Available				
	Protective function		Over-voltage, under-voltage, over-speed, over-load, over-heat, over-current, encoder error, excess position deviation, EEPROM error etc.				
	Alarm data trace back function		Tracing back of alarm data is available				
	Deterioration diagnosis function		Available

Mass: 0.8 kg

<Attached to the driver>

Connector of power and motor side	
Connector XA	05JFAT-SAXGGKK-A J.S.T. Mfg. Co., Ltd.
Connector XB	06JFAT-SAXGGKK-A J.S.T. Mfg. Co., Ltd.

B-frame

* For connectors X1 to X7, refer to the list provided in the A-frame table because both frames use the same connectors.

Mass: 1.0 kg

C-frame

* For connectors X1 to X7, refer to the list provided in the A-frame table because both frames use the same connectors.

Mass: 1.6 kg

D-frame (200 V)

* For connectors X1 to X7, refer to the list provided in the A-frame table because both frames use the same connectors.

Mass: 2.1 kg

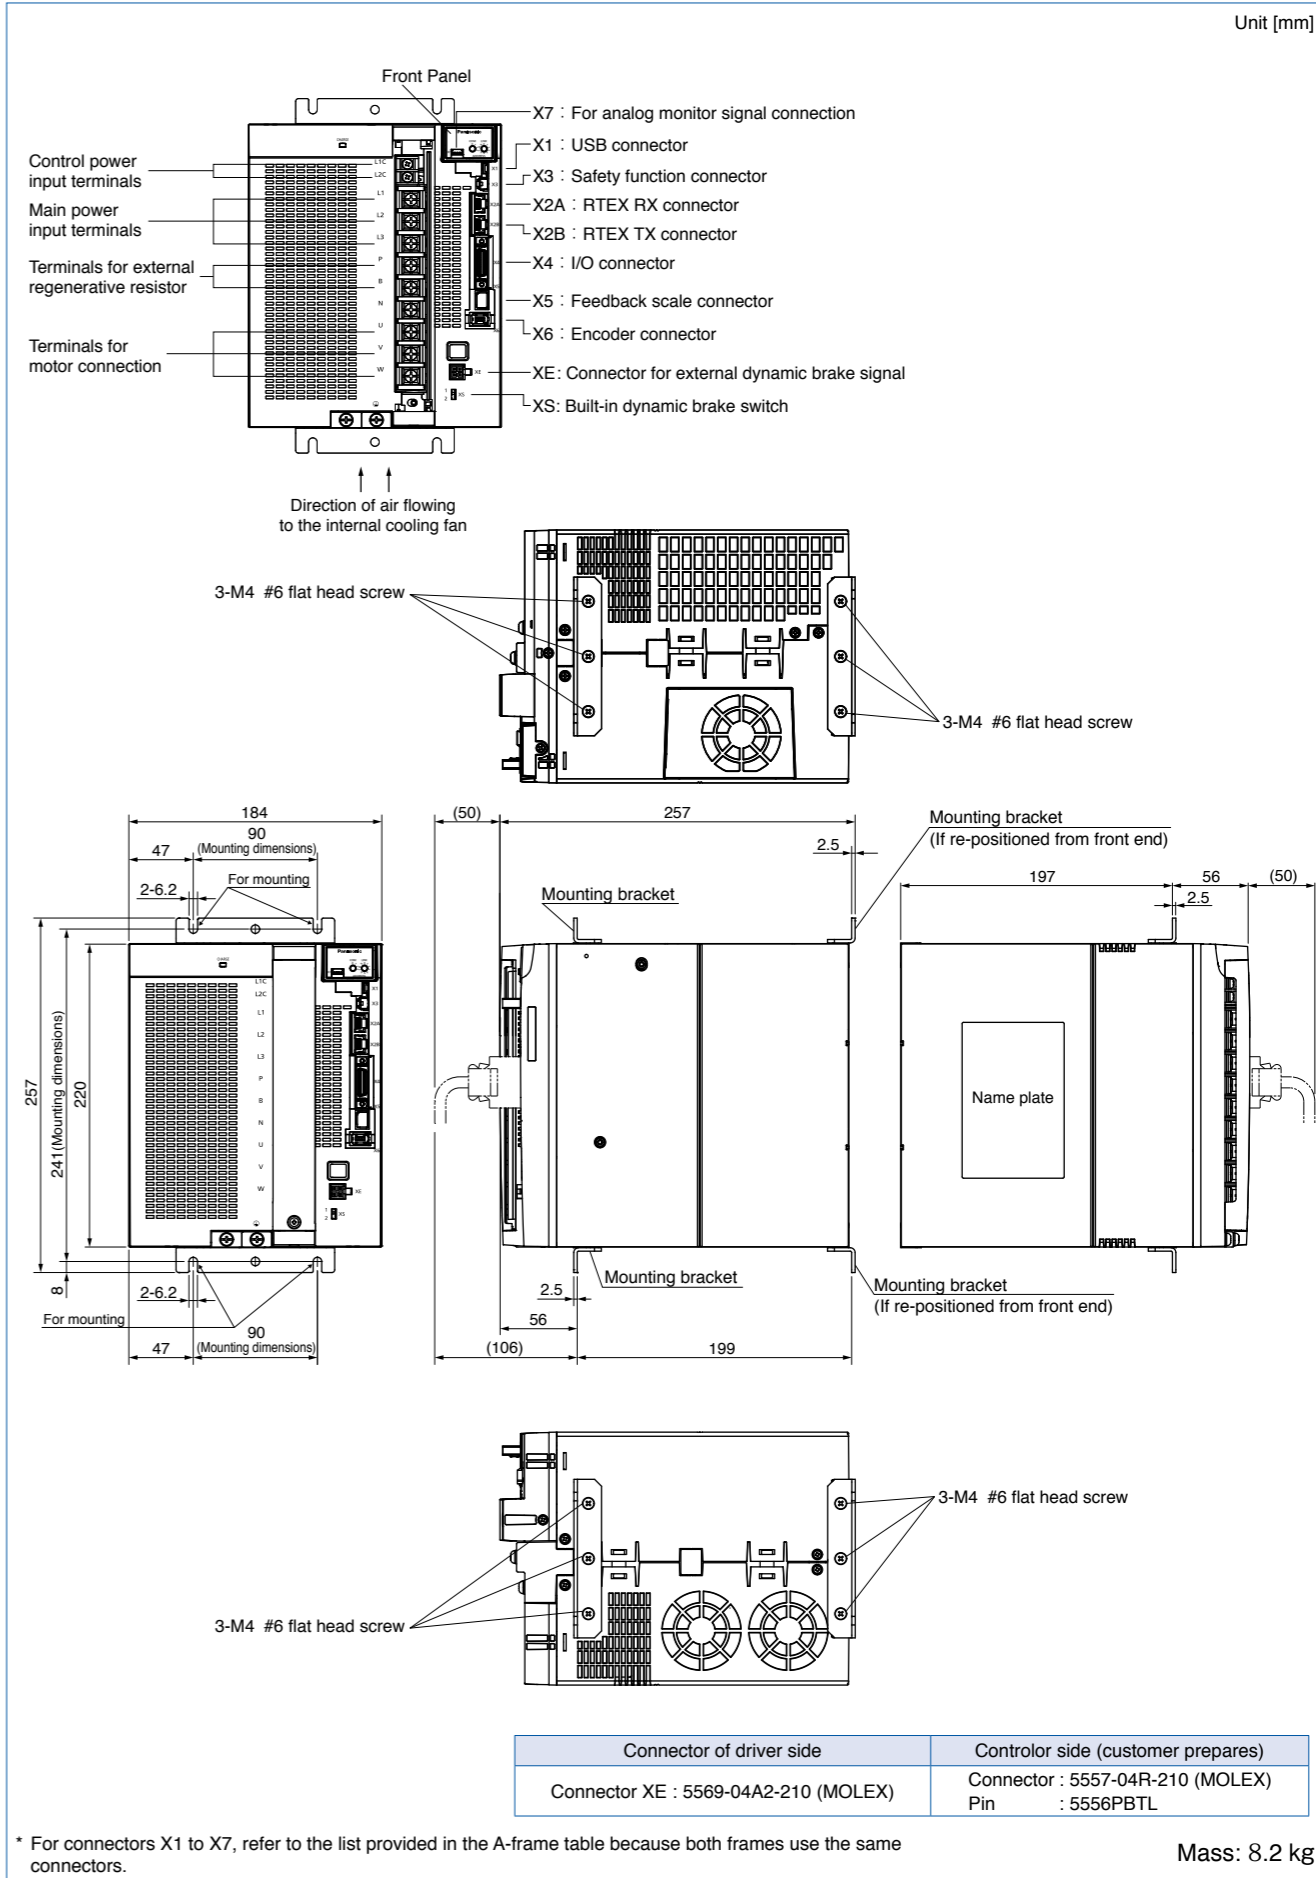

E-frame (200 V)

F-frame (200 V)

G-frame (200 V) (A6NE series are not available.)

H-frame (200 V) (A6NE series are not available.)

Refer to P.29 to P.42 for other options than the interface cable and interface connector kit.

Cable for Interface

Part No. DV0P0800 Cable length 2 m, core wire AWG 26 is connected.

• Table for wiring

Pin No.	Signal name	color	Pin No.	Signal name	color	Pin No.	Signal name	color
1*	BRK-OFF+	Orange (Red1)	10*	HOME	Pink (Black1)	19	OB-/OCMP2-	Pink (Red2)
2*	BRK-OFF-	Orange (Black1)	11*	EXT2	Orange (Red2)	20	OB+/OCMP2+	Pink (Black2)
3*	ALM+	Gray (Red1)	12*	EXT3	Orange (Black2)	21	OCMP3+	Orange (Red3)
4*	ALM-	Gray (Black1)	13*	SI-MON4	Gray (Red2)	22	OCMP3-	Gray (Red3)
5*	SI-MON5	White (Red1)	14	BTP-I	Gray (Black2)	23	-	Gray (Black3)
6	I-COM	White (Black1)	15	BTN-I	White (Red2)	24	-	White (Red3)
7*	POT	Yellow (Red1)	16	GND	White (Black2)	25*	EX-OUT1+	White (Black3)
8*	NOT	Yellow (Black1)	17	OA+/OCMP1+	Yellow (Red2)	26*	EX-OUT1-	Orange (Black3)
9*	SI-MON1	Pink (Red1)	18	OA-/OCMP1-	Yellow (Black2)			

The signals allocated to the pin No. with “*” in the table are factory default.

<Remarks>

Color designation of the cable e.g.) Pin-1 Cable color : Orange (Red1) : One red dot on the cable

<Caution>

The shield of this cable is not connected to the terminal of the connector.
The shielded wire of the cable is connected to the connector shell of the cable, and is connected to the FG via the connector shell on the Driver side. When connecting the shielded wire of the cable to GND, use the connector kit DV0P0770 for the interface. At that time, please note that if you connect the shield and the connector shell on the cable side and process it, FG and GND will be connected.

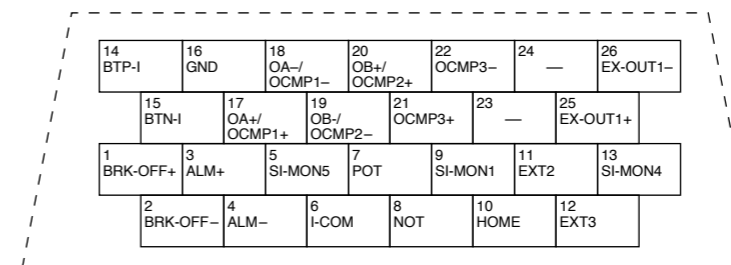

Connector Kit for Interface

Part No. DV0P0770

• Components

Title	Part No.	Number	Manufacturer	Note
Connector	10126-3000PE	1	Sumitomo 3M	For CN X4 (26-pins)
Connector cover	10326-52AO-008	1	(or equivalent)	

• Pin disposition: Connector X4 (26 pins) (viewed from the soldering side)

<Remarks>

1. Check the stamped pin-No. on the connector body while making a wiring.
2. For the symbols representing the signal names or the functions of the signals in the figure above, refer to the operation manual.

Servo driver with EtherCAT open network

EtherCAT  **EtherCAT**
AC servo motor & driver

MINAS A6B series

Special Order Product

A6BE series

A6BF series

INDEX

Features.....	369
Driver appearance	371
System configuration.....	371
Driver	372
Dimensions of driver	372

Quickly

Response frequency 3200 Hz & communication rate 100 Mbps enable fast and highly accurate operation.

Configurable even for motors with a maximum rotating speed 6500 r/min.*

* MHMF and MQMF types with a maximum wattage 400 W

Wisely

New algorithm “Two-degree-of-freedom control method” is used to improve machining accuracy and productivity.

Easily

Easy and speedy set-up with set-up support software “PANATERM”

● Fully-featured EtherCAT application (7 control modes, 32 origin-return modes, 2 synchronous modes, and an asynchronous mode.) ● Capable of system upgrade with various slaves. ● Capable of establishing PC-based systems without needing dedicated hardware. ● Planned to pass official EtherCAT Conformance Test. ● Under development of A6BF with safety I/F *2 corresponding to international standard, and A6BL/A6BM supporting linear motors *2 : IEC61800-5-2 STO, IEC61508 SIL3.

● The EtherCAT is a registered trademark of patented technology licensed from Beckhoff Automation GmbH in Germany.

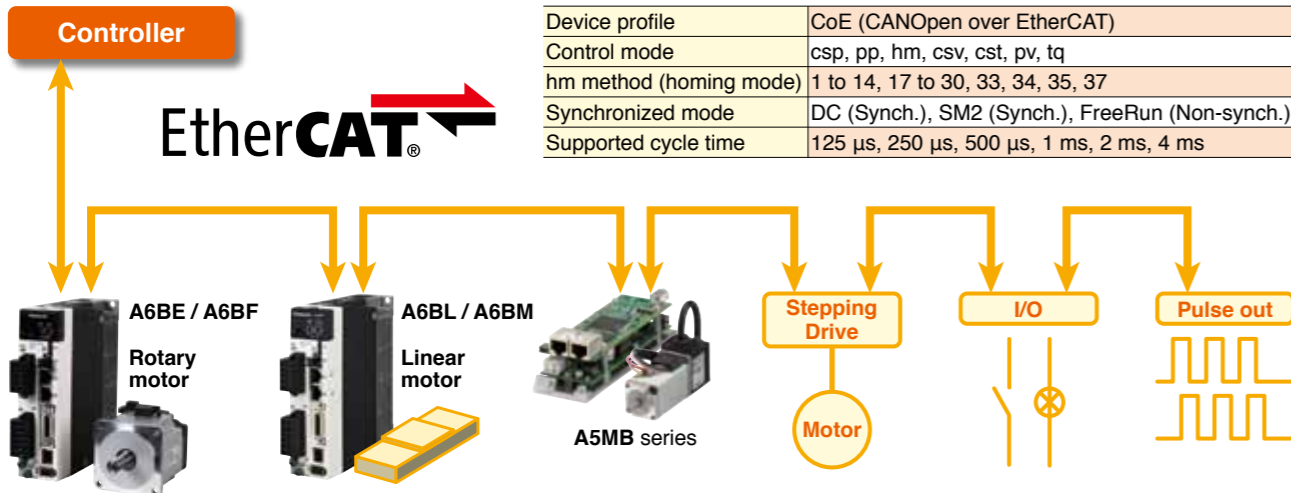

Special Order Product For more information, please visit our website or request to our distributors separately.

Appearance

* The photo is A6BF series. There are no X3 and X5 connectors in the A6BE series.

Typical system configuration

EtherCAT specification

Device profile	CoE (CANOpen over EtherCAT)
Control mode	csp, pp, hm, csv, cst, pv, tq
hm method (homing mode)	1 to 14, 17 to 30, 33, 34, 35, 37
Synchronized mode	DC (Synch.), SM2 (Synch.), FreeRun (Non-synch.)
Supported cycle time	125 μs, 250 μs, 500 μs, 1 ms, 2 ms, 4 ms

● For supported motors, refer to A6 series P.29 to P.42. For options, refer to A6N series P.368 For more information, refer to specification sheets because "Signal names" and "Pin configuration" of connectors vary.

Compact Servo Only for Position Control.

Ultra compact
position control type

MINAS E Series

1 Best Fit to Small Drives

- Further evolution in down-sizing, by 47 % in size. (Note)
- Exclusively designed for position control.

(Note) Compared to MUDS043A1

2 Easy to Handle, Easy to Use

- DIN-rail mounting unit (option) improves handling/installation.
- User-friendly Console makes the setup easy.
- High functionality Real-Time Auto-Gain Tuning enables adjustment-free operation.

3 High-Speed Positioning with Resonance Suppression Filters

- Built-in notch filter suppresses resonance of the machine.
- Built-in adaptive filter detect resonance frequency and suppress vibration.

4 Smoother operation for Low Stiffness Machine

- Damping control function suppresses vibration during acceleration/deceleration

1. Easy to Handle, Easy to Use

High-functionality Real-Time Auto-Gain Tuning (Note 1)

- Offers real automatic gain tuning for low and high stiffness machines with a combination of an adaptive filter.
- Supports the vertical axis application where the load torque is different in rotational direction.

DIN-rail mounting unit (option)

- DIN-rail mounting unit allows parallel mounting with small control devices such as PLC.
- Easy to mount and easy to dismount.

2. Further Reduction of Vibration

Adaptive filter (Note1)

- Makes the notch filter frequency automatically follow the machine resonance frequency in real-time auto-gain tuning.
- Suppression of "Judder" noise of the machine, which is caused by variation of the machines or resonance frequency due to aging, can be expected.

Notch filter (Note1)

- 1-channel notch filter is equipped in the driver independent from adaptive filter.
- Each of 2 filters can set up frequency and notch width, and frequency in 1Hz unit. Suppression of "Judder" noise of the machine which has multiple resonance points can be expected.

Damping control (Note1)

- You can suppress vibration occurring at both starting and stopping in low stiffness machine, by manually setting up vibration frequency in 0.1 Hz unit. Note) Only applies to manual adjustment

(Note1) Select at positioning action mode.

• At high speed positioning mode (Pr02=0) Select either one of notch filter, damping control or high-functionality real-time auto-gain tuning. Not possible to use them all at the same time. Adaptive filter cannot be used.

• At high-functionality positioning mode (Pr02=1) All of notch filter, damping control, high-functionality real-time auto-gain tuning and adaptive filter can be used at the same time.

3. Further Flexibility and Multiplicity

Console (Option)

- You can set up parameters, copy and make a JOG run.
- Convenient for maintenance at site.
- Refer to P.403, Options.

Command control modes

- Offers 2 command modes, "Position control" and "Internal velocity control".
- You can make a 4-speed running at preset values with parameter at internal velocity control mode.

Inrush current suppressing function

- Inrush suppressing resistor, which prevent the circuit breaker shutdown of the power supply caused by inrush current at power-on, is equipped in this driver.
- Prevents unintentional shutdown of the power supply circuit breaker in multi axis application and does not give load to the power line.

Regeneration discharging function

- Discharges the regenerative energy with external resistor, where energy is generated while stopping the load with large moment of inertia, or use in up-down operation, and is returned to the driver from the motor.
- No regenerative resistor is installed in the driver.
- It is highly recommended to install an external regenerative resistor (option).

Built-in dynamic brake

- You can select the dynamic brake action which short the servo motor windings of U, V and W, at Servo-OFF, CW/CCW over-travel inhibition, power shutdown and trip.
- You can select the action sequence depending on the machine requirement.

Setup support software (Option)

- With the setup support software, "PANATERM" via RS232 / RS485 communication port, you can monitor the running status of the driver and set up parameters. Note) Refer to P.398 for setup support software.

Key-way shaft and tapped shaft end

- Easy pulley attachment and easy maintenance
- Attache screw to the tapped shaft to prevent key or pulley from being pulled out.

Wave-form graphic function

- With the setup support software, "PANATERM", you can monitor the "Command speed", "Actual speed", "Torque", "Position deviation" and "Positioning complete signal".
- Helps you to analyze the machine and shorten the setup time. Note) Refer to P.398 for setup support software.

Frequency analyzing function

- You can confirm the response frequency characteristics of total machine mechanism including the servo motor with the setup support software, "PANATERM".
- Helps you to analyze the machine and shorten the setup time. Note) Refer to P.398 for setup support software.

Torque limit switching function

- You can select 2 preset torque limit value from external input.
- Use this function for tension control or press-hold control.

Conformity to CE and UL Standards

Subject	Standard conformed		
Motor	IEC60034-1	IEC60034-5 UL1004 CSA22.2 No.100	Conforms to Low-Voltage Directives
	EN50178	UL508C CSA22.2 No.14	
Motor and driver	EN55011	Radio Disturbance Characteristics of Industrial, Scientific and Medical (ISM) Radio-Frequency Equipment	Conforms to references by EMC Directives

• Wiring of main circuit

Circuit Breaker (MCCB)
Protects the power lines. Shuts off the circuit when overcurrent passes.

Noise Filter (NF)
Prevents external noise from the power lines. And reduces an effect of the noise generated by the servo driver.

Magnetic Contactor (MC)
Turns on/off the main power of the servo driver. Surge absorber to be used together with this.

Reactor (L)
Reduces harmonic current of the main power.

Pin-5 and Pin-3 of CN POWER

• Connect an external regenerative resistor (option) between P(pin-5) and B(pin-3) of connector, CN X1, when regenerative energy is large. (Refer to P.404 for regenerative resistor.)

Parts customer to prepare	

■ List of recommended peripheral devices

Power supply	Motor		Power capacity (at rated output)	Circuit Breaker (Rated current)	Noise Filter	Magnetic Contactor Contact Composition	Wire diameter (L1, L2, L3, U, V and W)
	Series	Output					
Single phase, 100 V	MUMA	50 W	0.3 kVA	(5 A)	DV0P4160	10 A (3P+1a)	0.75 mm ² to 0.85 mm ² AWG18
		100 W	0.4 kVA	(10 A)			
		200 W	0.5 kVA	(10 A)			
Single phase, 200 V	MUMA	50 W	0.3 kVA	(5 A)	DV0P4160	15 A (3P+1a)	0.75 mm ² to 0.85 mm ² AWG18
		100 W	0.4 kVA	(10 A)			
		200 W	0.5 kVA	(10 A)			
3-phase 200 V	MUMA	50 W	0.3 kVA	(5 A)	DV0P4160	10 A (3P+1a)	0.75 mm ² to 0.85 mm ² AWG18
		100 W	0.4 kVA	(10 A)			
		200 W	0.5 kVA	(10 A)			

- * Select the single and 3-phase common specifications corresponding to the power supplies.
- To conform to EC Directives, install a circuit breaker which conforms to IEC and UL Standards (Listed, Ⓢ marked) between noise filter and power supply.
- For details of the noise filters, refer to 416.

<Remarks>

- Use a copper conductor cables with temperature rating of 60 °C or higher for main power connector and ground terminal wiring. Use a cable for ground with diameter of 2.0 mm² (AWG14) or larger.

Basic Specifications	Input power	Single phase, 100 V	Single phase, 100 V to 115 V	+10 % -15 %	50 Hz/60 Hz	
		Single phase, 200 V	Single phase, 200 V to 240 V	+10 % -15 %	50 Hz/60 Hz	
		3-phase, 200 V	3-phase, 200 V to 240 V	+10 % -15 %	50 Hz/60 Hz	
	Environment	Temperature	Operating : 0 °C to 55 °C, Storage : -20 °C to 65 °C (Max.temperature guarantee 80 °C for 72 hours <Normal temperature>)			
		Humidity	Both operating and storage : 90 %RH or less (free from condensation)			
		Altitude	1000 m or lower			
		Vibration	5.88 m/s ² or less, 10 Hz to 60 Hz (No continuous use at resonance frequency)			
	Withstand voltage	Should be 1500 VAC (Sensed current: 20 mA) for 1 minute between Primary and Ground.				
	Control method	IGBT PWM Sinusoidal wave drive				
	Encoder feedback	2500 P/r (10000 resolution) incremental encoder				
	Control signal	Input	7 inputs (1) Servo-ON, (2) Alarm clear and other inputs vary depending on the control mode.			
		Output	4 outputs (1) Servo alarm, (2) Alarm, (3) Release signal of external brake and other outputs vary depending on the control mode.			
	Pulse signal	Input	2 inputs Supports both line driver I/F and open collector I/F.			
		Output	4 outputs Feed out the encoder pulse (A, B and Z-phase) in line driver. Z-phase pulse is also feed out in open collector.			
Communication function	RS232	1 : 1 communication to a host with RS232 interface is enabled.				
Display LED	(1) Status LED (STATUS), (2) Alarm code LED (ALM-CODE)					
Regeneration	No built-in regenerative resistor (external resistor only)					
Dynamic brake	Built-in					
Control mode	3 modes of (1) High-speed position control, (2) Internal velocity control and (3) High-functionality positioning control are selectable with parameter.					
Position control	Control input	(1) CW over-travel inhibition, (2) CCW over-travel inhibition, (3) Deviation counter clear, (4) Gain switching, (5) Electronic gear switching				
	Control output	(1) Positioning complete (In-position)				
	Pulse input	Max. command pulse frequency	Line driver : 500 kpps, Open collector : 200 kpps			
		Type of input pulse train	Differential input. Selectable with parameter, ((1) CW/CCW, (2) A and B-phase, (3) Command and Direction)			
		Electronic gear (Division/Multiplication) of command pulse	Setup of electronic gear ratio Setup range of (1-10000) × 2 ⁽⁰⁻¹⁷⁾ /(1-10000)			
Smoothing filter	Primary delay filter or FIR type filter is selectable to the command input.					
Internal speed control	Control input	(1) CW over-travel inhibition, (2) CCW over-travel inhibition, (3) Selection 1 of internal command speed, (4) Selection 2 of internal command speed, (5) Speed zero clamp				
	Control output	(1) Speed arrival (at-speed)				
	Internal speed command	Internal 4-speed is selectable with control input.				
	Soft-start/down function	Individual setup of acceleration and deceleration are enabled, with 0 s to 10 s/1000 r/min. Sigmoid acceleration/deceleration is also enabled.				
	Zero-speed clamp	0-clamp of internal speed command with speed zero clamp input is enabled.				
Auto-gain tuning	Real-time	Estimates the load inertia in real-time in actual operation and sets up the gain automatically corresponding to the machine stiffness. Useable at (1) High-response position control, (2) Internal speed control and (3) High-functionality position control.				
	Normal mode	Estimates the load inertia with an action command inside of the driver, and sets up the gain automatically corresponding to setup of the machine stiffness. Useable at (1) High-response position control, (2) Internal speed control and (3) High-functionality position control.				
Common	Masking of unnecessary input	Masking of the following input signal is enabled. (1) Over-travel inhibition, (2) Speed zero clamp, (3) Torque limit switching				
	Division of encoder feedback pulse	1 P/r to 2500 P/r (encoder pulses count is the max.).				
	Protective function	Hardware error	Over-voltage, under-voltage, over-speed over-load, over-heat, over-current and encoder error etc.			
		Software error	Excess position deviation, command pulse division error, EEPROM error etc.			
	Traceability of alarm data	Traceable up to past 14 alarms including the present one.				
	Damping control function	Manual setup with parameter				
	Setup	Manual	Console			
		Setup support software	PANATERM (Supporting OS : Windows98, Windows ME, Windows2000, and WindowsXP)			

Standard Wiring Example of Main Circuit

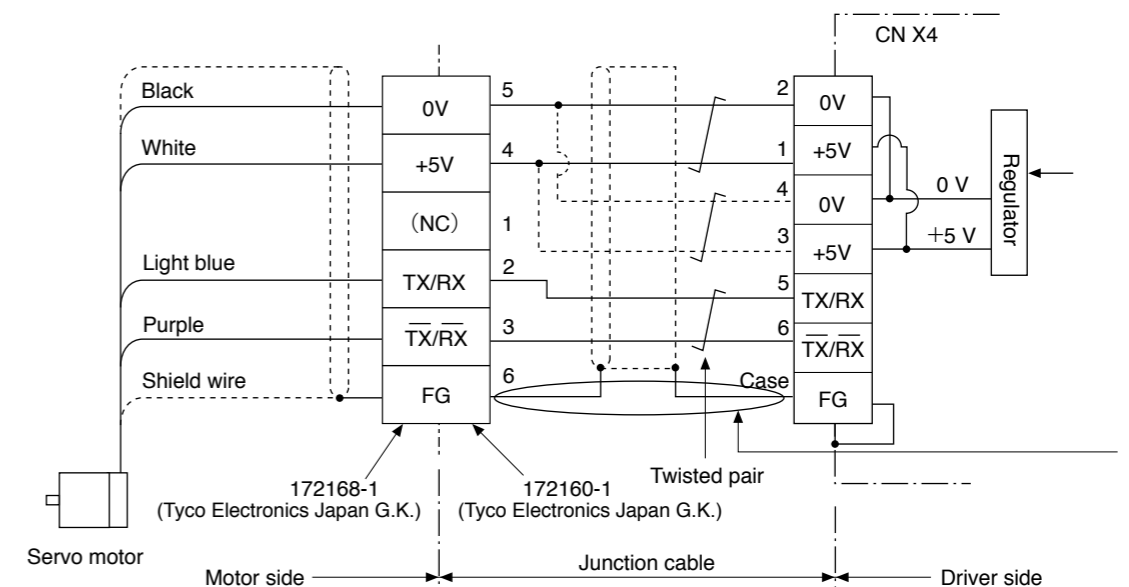

3-Phase, 200 V

Single Phase, 100 V / 200 V

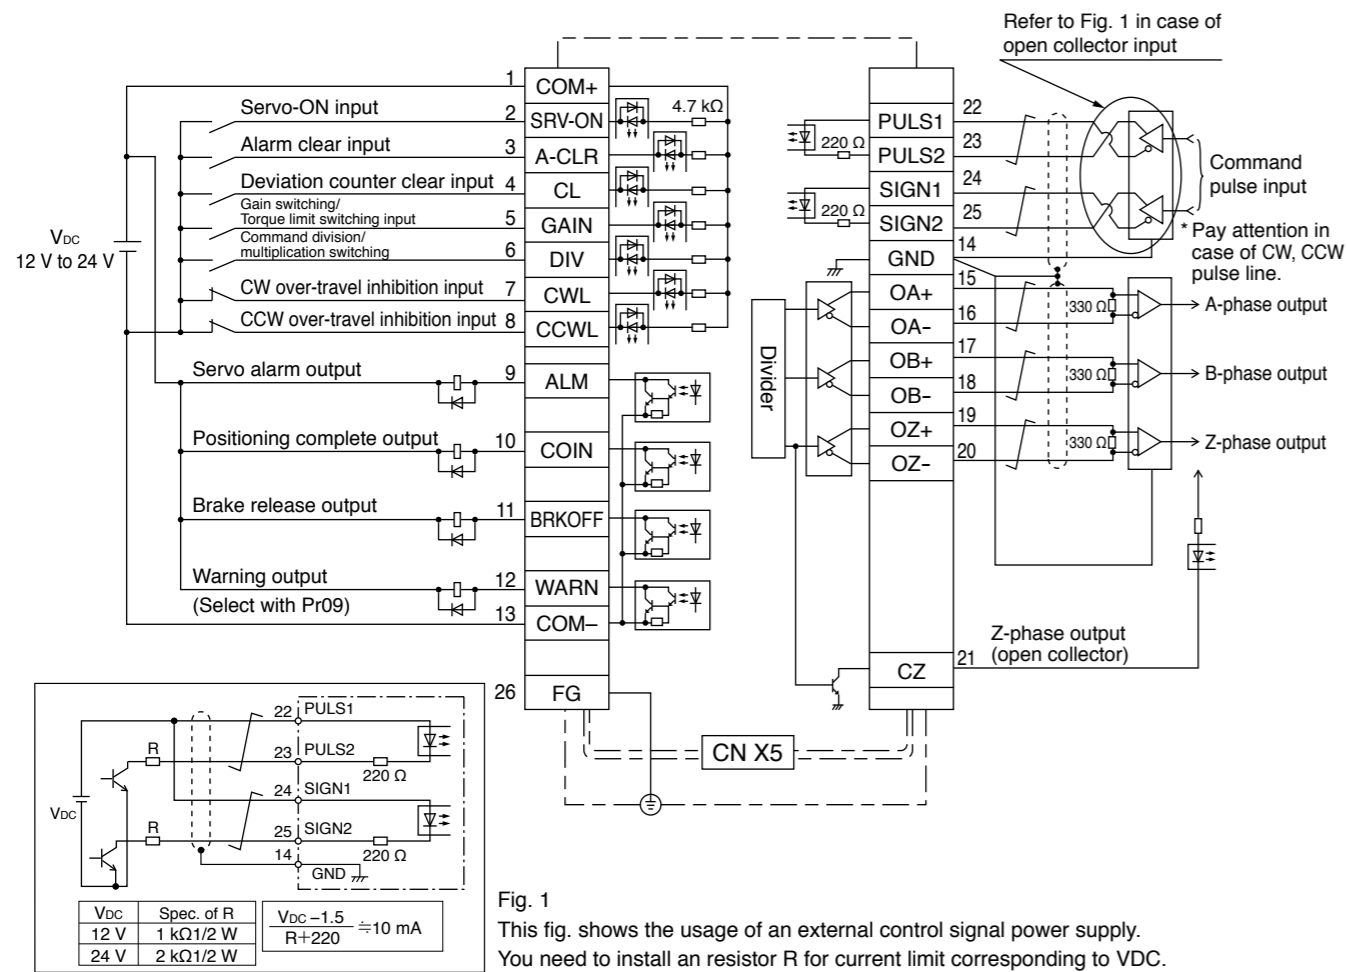

Encoder Wiring Diagram

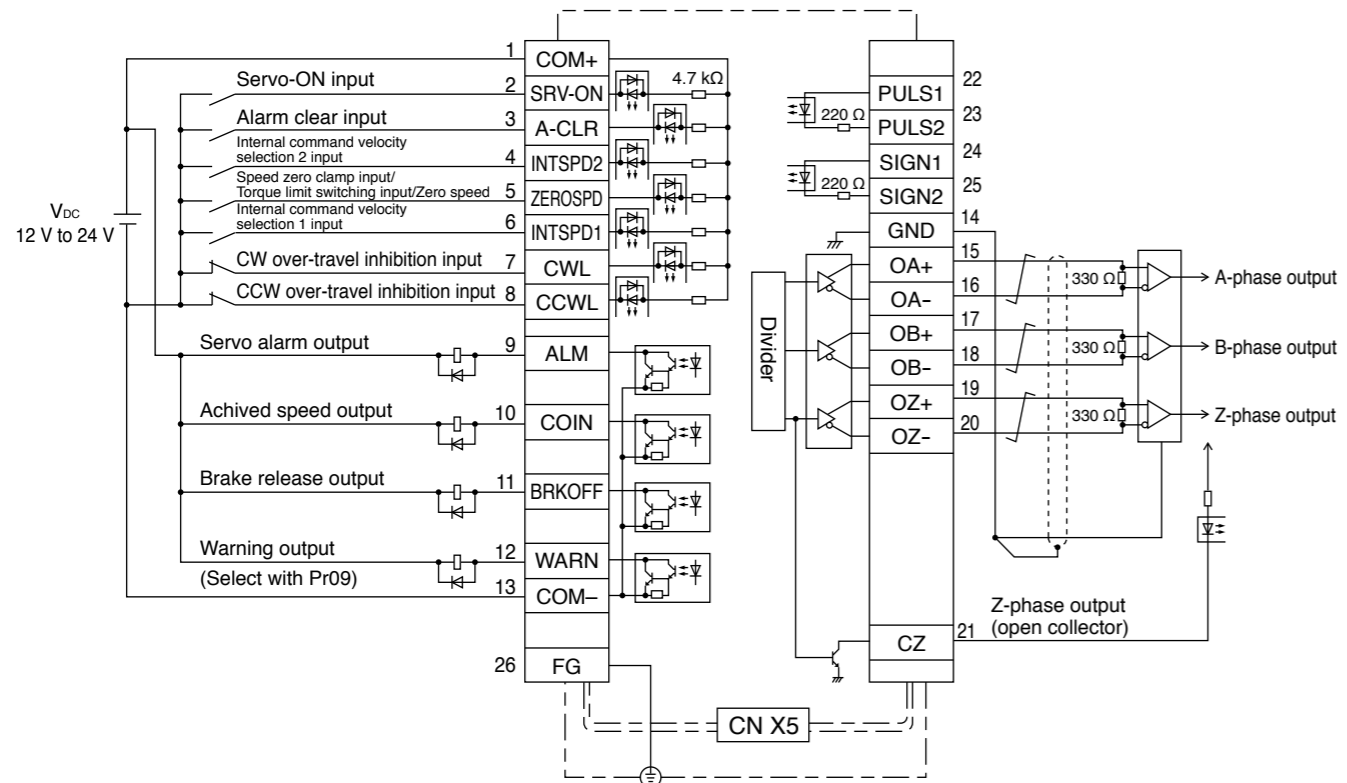

When you make your own junction cable for encoder (Refer to P.401, P.402 "Options" for connector.)

- 1) Refer the wiring diagram.
- 2) Use the twisted pair wire with shield, with core diameter of 0.18 mm² (AWG24) or larger, with higher bending resistance.
- 3) Use the twisted pair wire for the corresponding signal and power supply.
- 4) Shielding
Connect the shield of the driver to the case of CN X4.
Connect the shield of the motor to Pin-6.

*When you lower the torque limit setup (Pr5E and 5F), running range at high speed might be lowered as well.

- Note) 1. Regenerative brake frequency represents the frequency of the motor's stops from the rated speed with deceleration without load.
- If the load is connected, frequency will be defined as 1/(m+1), where m = (load moment of inertia) / (rotor moment of inertia).
 - When the motor speed exceeds the rated speed, regenerative brake frequency is in inverse proportion to the square of (running speed/rated speed).
 - Power supply voltage is AC115 V (at 100 V of the main voltage). If the supply voltage fluctuates, frequency is in inverse proportion to the square of (Running supply voltage/115) relative to the value in the table.
 - When regeneration occurs continuously such cases as running speed frequently changes or vertical feeding, consult us or a dealer.
2. If the effective torque is within the rated torque, there is no limit in regenerative brake.
3. Consult us or a dealer if the load moment of inertia exceeds the specified value.
4. Specified releasing time is obtained with the use of surge absorber for brake (Z15D151 by SEMITEC Corporation or equivalent). () represents the actually measured value using a diode (200 V, 1 A or equivalent)

2. If the effective torque is within the rated torque, there is no limit in regenerative brake.
 3. Consult us or a dealer if the load moment of inertia exceeds the specified value.
 4. Specified releasing time is obtained with the use of surge absorber for brake (Z15D151 by SEMITEC Corporation or equivalent). () represents the actually measured value using a diode (200 V, 1 A or equivalent)

Specifications of Motor with Gear Reducer

Motor series		MUMA
Gear reducer	Backlash	3 minutes or smaller (initial value) at output shaft of the reducer
	Composition of gear	Planetary gear
	Gear efficiency	65 % to 85 %
	Rotational direction at output shaft (of reducer)	Same direction as the motor output shaft
	Composition of gear	Planetary gear
	Mounting method	Flange mounting
Environment	Permissible moment of inertia of the load (conversion to the motor shaft)	10 times or smaller than rotor moment of inertia of the motor
	Protective structure	IP44 (at gear reducer)
	Ambient temperature	0 °C to 40 °C
	Ambient humidity	85 %RH (free from condensation) or less
	Vibration resistance	49 m/s ² or less (at motor frame)
	Impact resistance	98 m/s ² or less

Setup Support Software "PANATERM" for MINAS series AC Servo Motor & Driver

Part No. DV0P4460 (Japanese/English version)

The PANATERM assists users in setting parameters, monitoring control conditions, setup support, and analyzing mechanical operation data on the PC screen, when installed in a commercially available personal computer, and connected to the MINAS A4 series, E series through the RS232 serial interface.

Basic Function

Parameter setup

- After a parameter is defined on the screen, it will be sent to the driver immediately.
- Once you register parameters you frequently use, they can be easily set up on the screen.

Monitoring Control Conditions

Monitor

- Control conditions: Control mode, velocity, torque, error and warning
- Driver input signal
- Load conditions: Total count of command/feedback pulses, Load ratio, Regenerative resistor load ratio

Alarm

- Displays the numbers and contents of the current alarm and up to 14 error events in the past.
- Clears the numbers and contents of the current alarm and up to 14 error events in the past.

Setup

Auto tuning

- Gain adjustment and inertia ratio measurement

Graphic waveform display

- The graphic display shows command velocity, actual velocity, torque, and error waveforms.

Absolute encoder setup

- Clears absolute encoder at the origin.
- Displays single revolution/multi-revolution data.
- Displays absolute encoder status.

Analysis of Mechanical Operation Data

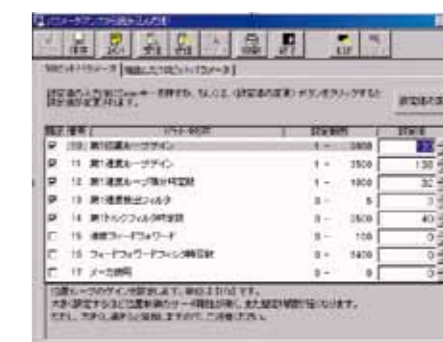

Frequency analysis

- Measures frequency characteristics of the machine, and displays Bode diagram.

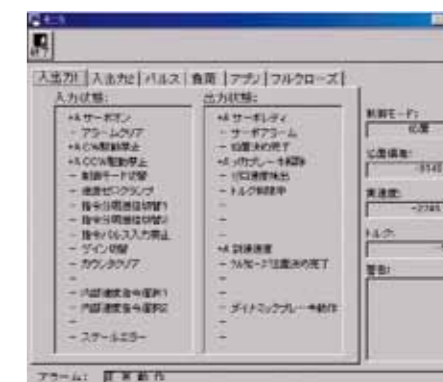

Can not use with A5, A6 Family.

Hardware configuration

- [Personal computer] • CPU : Pentium 100MHz or more • Memory : 16 MB or more (32 MB recommended)
- Hard disk capacity (vacancy of 25 MB or more recommended) • OS : Windows® 98, Windows® Me, Windows® 2000, Windows® XP (US version)
- Communication speed of serial communication port : 2400 bps or more (The software may not operate normally using USB-to-Serial adapter.)
- [Display] • Resolution : 640*480 (VGA) or more (desirably 1024*768) • Number of colors : 256 colors or more
- [CD-ROM drive] • CD-ROM drive operable on the above-mentioned personal computer

Parameter

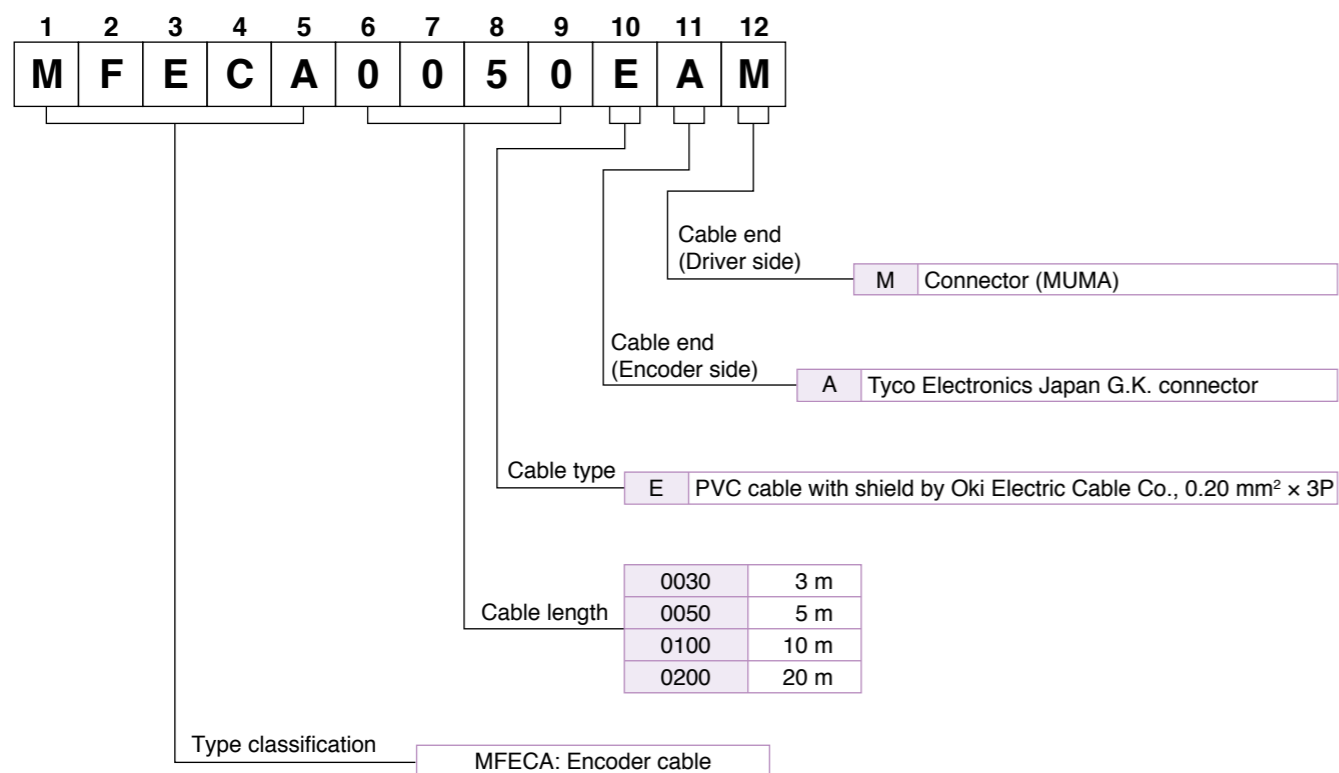

Monitor

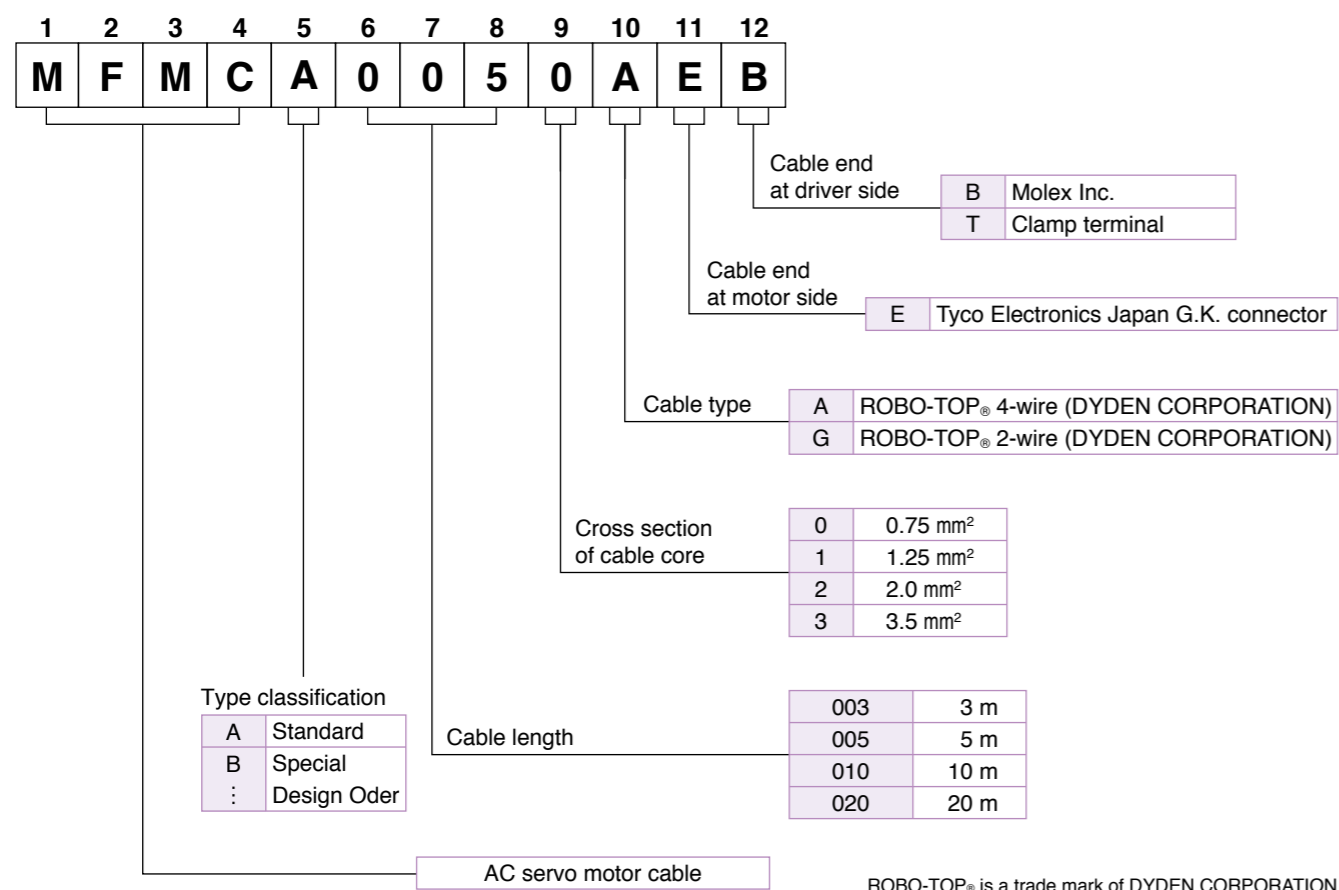

Graphic waveform display

Encoder Cable For available optional items, please refer to P.400.

Motor Cable, Brake Cable For available optional items, please refer to P.400.

Connector Kit for Power Supply Connection

Part No. DV0P2870

● Parts composition

Title	Part No.	Number	Manufacturer	Note
Connector (10 pins)	5557-10R-210	1	Molex Inc.	For connector, CN X1 (10 pins)
Connector pin	5556PBTL	6		

● Pin configuration of connector CN X1

● Recommended manual crimping tool (to be prepared by customer)

Part No.	Cable material
57026-5000	UL1007
57027-5000	UL1015

<Cautions>

1. The above pin disposition is shown when viewed from the terminal inserting direction. Make a correct wiring by checking the stamped pin numbers on the connector itself.
2. Refer to P.386 for wiring and connection.
3. Do not connect anything to pins marked "NC".

Connector Kit for Motor/Encoder Connection

Part No. DV0P3670 (Incremental 2500 pulse, 5-wire)

This option is required when you make your own encoder cable and motor cable. (Brake cable is required for brake.)

● Parts composition

Title	Part No.	Number	Manufacturer	Note
Connector (Driver side)	3E206-0100 KV	1	Sumitomo 3M	For connector, CN X4 (6 pins)
Shell kit	3E306-3200-008	1	or equivalent	
Connector (6 pins)	172160-1	1	Tyco Electronics	For junction to encoder cable (6 pins)
Connector pin	170365-1	6		
Connector (4 pins)	172159-1	1	Tyco Electronics	For junction to motor power cable (4 pins)
Connector pin	170366-1	4		
Connector (6 pins)	5557-06R-210	1	Molex Inc.	For connector, CN X3 (6 pins)
Connector pin	5556PBTL	4		

<Remarks>

We may use parts equivalent to the above for shell and connector cover.

● Pin configuration of connector CN X4 plug

● Recommended manual crimping tool (to be prepared by customer)

Title	Part No.	Manufacturer	Cable material
For encoder cable junction	755330-1	Tyco Electronics	—
For motor power cable junction	755331-1		
For Connector CN X3	57026-5000	Molex Inc.	UL1007
	57027-5000		UL1015

<Remarks>

1. The above pin configuration is shown when viewed from the pin-soldering direction. Make a correct wiring by checking the stamped pin numbers on the connector itself.
2. Connect the shield of the wire to the case (FG) without fail.
3. For wiring and connection, refer to P.386.

● Pin configuration of encoder cable junction

● Pin configuration of motor power cable junction

● Pin configuration of mating connector to CN X3 connector

<Cautions>

1. The above pin configuration is shown when viewed from the terminal inserting direction. Make a correct wiring by checking the stamped pin numbers on the connector itself.
2. Refer to P.386 for wiring and connection.

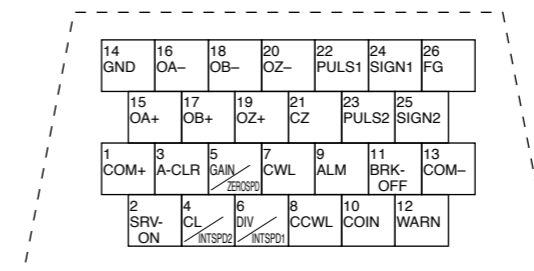

Connector Kit for Interface

Part No. DV0P0770

● Parts composition

Title	Part No.	Number	Manufacturer	Note
Connector	10126-3000PE	1	Sumitomo 3M	For connector, CN X5 (26 pins)
Connector cover	10326-52A0-008	1	or equivalent	

● Pin configuration of connector CN X5 (26 pins) (viewed from the soldering side)

<Cautions>

1. Make a correct wiring by checking the stamped pin numbers on the connector itself.
2. Refer to P.387 for symbols and functions of the above signals.

Interface Cable

Part No. DV0P0800 Cable of 2 m is connected.

● Dimensions

● Wiring table

Pin No.	Title of signal	Color or cable	Pin No.	Title of signal	Color or cable	Pin No.	Title of signal	Color or cable
1	COM+	Orange (Red 1)	10	COIN	Pink (Black 1)	19	OZ+	Pink (Red 2)
2	SRV-ON	Orange (Black 1)	11	BRK-OFF	Orange (Red 2)	20	OZ-	Pink (Black 2)
3	A-CLR	Gray (Red 1)	12	WARN	Orange (Black 2)	21	CZ	Orange (Red 3)
4	CL/INTSPD2	Gray (Black 1)	13	COM-	Gray (Red 2)	22	PULS1	Gray (Red 3)
5	GAIN/ZEROSPD	White (Red 1)	14	GND	Gray (Black 2)	23	PULS2	Gray (Black 3)
6	DIV/INTSPD1	White (Black 1)	15	OA+	White (Red 2)	24	SIGN1	White (Red 3)
7	CWL	Yellow (Red 1)	16	OA-	White (Black 2)	25	SIGN2	White (Black 3)
8	CCWL	Yellow (Black 1)	17	OB+	Yellow (Red 2)	26	FG	Orange (Black 3)
9	ALM	Pink (Red 1)	18	OB-	Yellow (Black 2)			

<Notes>
e. g. of Pin No. designation :
Pin No. 1 ... Wire color is orange, and one red dot.
Pin No. 12 ... Wire color is orange, and two black dot.

<Caution>

Cable pin No. 26 is not connected to the connector shell (housing) or shielded wire (net wire).
Pin No. 26 of the Driver is connected to the shell (housing) of the connector.
The shielded wire (net wire) of the cable is connected to the shell (housing) of the connector of the cable, and by connecting the connector of the optional cable to the Driver, pin No. 26 of the cable and the shielded wire (net wire) of the cable gets connected via the Driver.

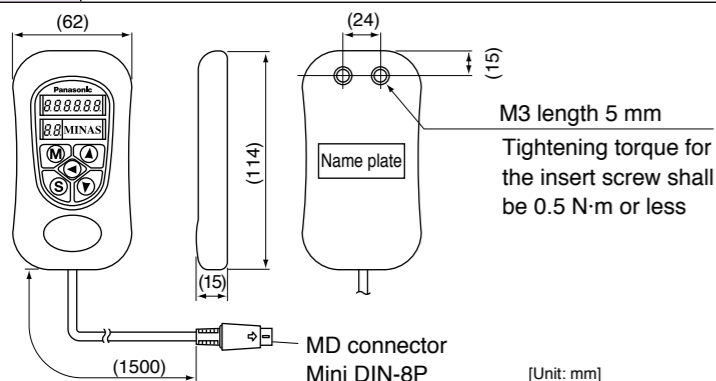

Communication Cable (For Connection with PC)

Part No. DV0P1960

Console

Part No. DV0P4420

DIN Rail Mounting Unit

Part No. DV0P3811

● Dimensions

<Notes>

2 mounting screws (M4 X L8, Pan head) are attached.
Rail stopper can be extended to max. 10 mm.

<Cautions>

Please read carefully operation manual before using this product.
In addition, please do not apply excessive stress to the product.

• How to Install

• Removing from DIN Rail

External Regenerative Resistor

Part No.	Manufacturer's Part No.	Specifications			Note (Input Power of drive)
		Resistance Ω	Rated power W	Activation temperature of built-in fuse °C	
DV0P2890	45M03	50	10	137 ⁺³ / ₋₂	Single phase, 100 V
DV0P2891	45M03	100	10	137 ⁺³ / ₋₂	Single/3-phase, 200 V

Manufactured by Iwaki Musen Kenkyuusho Co., Ltd.

● Dimensions

<Caution of when using external regeneration resistor>

Since it becomes high temperature, external regeneration resistor must be installed according to the contents shown below.

- Attach to incombustibles, such as metal.
 - Install in the place which cannot touch directly by covering with incombustibles etc.
 - Do not install near the combustibles.
- Although the thermal cutoff is built in external regeneration resistor, the skin temperature of regeneration resistor may become high exceeding the operating temperature of thermal cutoff by the time the thermal cutoff operates in driver failure. The thermal cutoff is for preventing ignition of the regeneration resistor in driver failure, and is not for controlling the skin temperature of resistor.

<Remarks>

Thermal fuse is installed for safety.
The thermal fuse may blow due to heat dissipating condition, working temperature, supply voltage or load fluctuation. Make it sure that the surface temperature of the resistor may not exceed 100 °C at the worst running conditions with the machine, which brings large regeneration (such case as high supply voltage, load inertia is large or deceleration time is short) Please carry out air cooling if needed.

Reactor

Harmonic restraint

Harmonic restraint measures are not common to all countries. Therefore, prepare the measures that meet the requirements of the destination country.

When installing a product for Japan, refer to the instruction manual available on our website.

[Panasonic Corporation, Motor Business Unit web site]

industrial.panasonic.com/ac/e/

<Remarks>

When using a reactor, be sure to install one reactor to one servo driver.

EU Directives

The EU Directives apply to all such electronic products as those having specific functions and have been exported to EU and directly sold to general consumers. Those products are required to conform to the EU unified standards and to furnish the CE marking on the products. However, our AC servos meet the relevant EU Directives for Low Voltage Equipment so that the machine or equipment comprising our AC servos can meet EU Directives.

EMC Directives

MINAS Servo System conforms to relevant standard under EMC Directives setting up certain model (condition) with certain locating distance and wiring of the servo motor and the driver. And actual working condition often differs from this model condition especially in wiring and grounding. Therefore, in order for the machine to conform to the EMC Directives, especially for noise emission and noise terminal voltage, it is necessary to examine the machine incorporating our servos.

Conformity to UL Standards

Observe the following conditions of (1) and (2) to make the system conform to UL508C (E164620).

- (1) Use the driver in an environment of Pollution Degree 2 or 1 prescribed in IEC60664-1. (e.g. Install in the control box with IP54 enclosure.)
- (2) Make sure to install a circuit breaker or fuse which are UL recognized (Listed) marked) between the power supply and the noise filter. For rated current of circuit breaker and fuse, refer to P.27 "Driver and List of Applicable Peripheral Devices". Use a copper cable with temperature rating of 75 °C or higher.
- (3) Over-load protection level
Over-load protective function will be activated when the effective current exceeds 115 % or more than the rated current based on the time characteristics (see the graph). Confirm that the effective current of the driver does not exceed the rated current. Set up the peak permissible current with Pr0.13 (Setup of 1st torque limit) and Pr5.22 (Setup 2nd torque limit).

Overload protection time characteristics

• Motor type: 80 mm sq. or less MSMF

• Motor type: 80 mm sq. or less MHMF

• Motor type: 80 mm sq. or less MQMF

• Motor type: 100 mm sq. or more MSMF

• Motor type: 100 mm sq. or more MHMF

• Motor type: 100 mm sq. or more MDMF

• Motor type: 100 mm sq. or more MGMF

● When export this product, follow statutory provisions of the destination country.

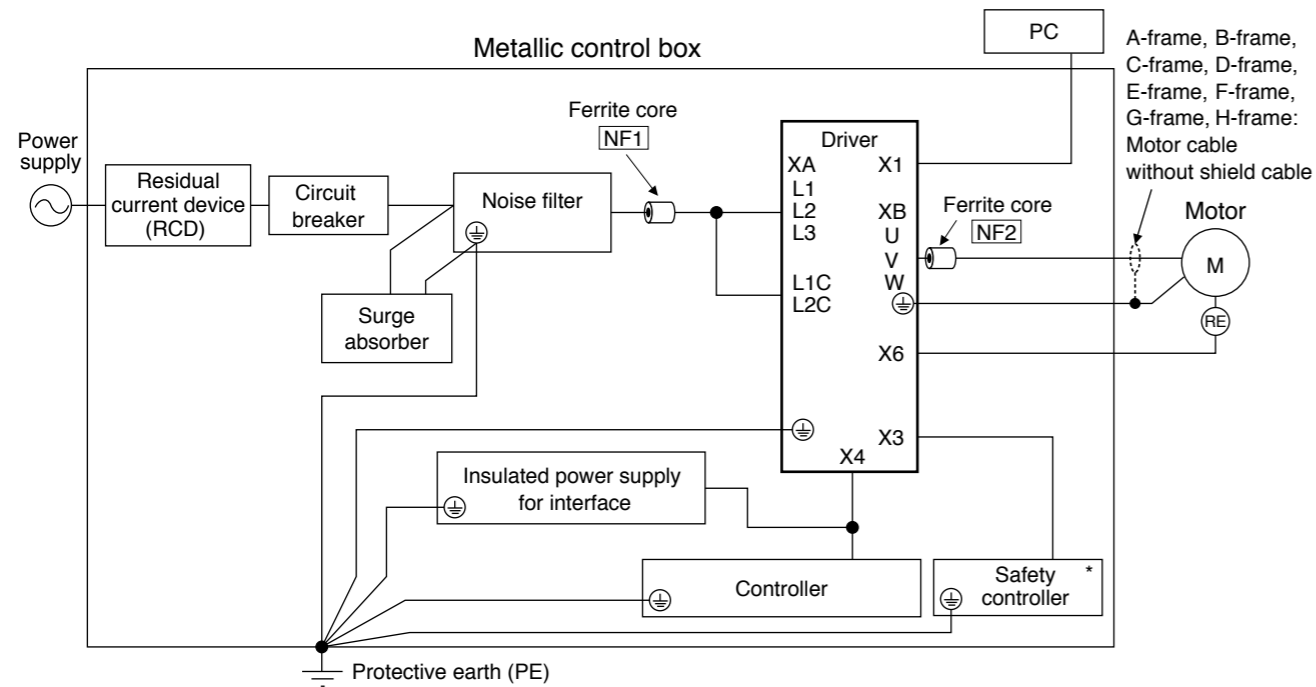

*1 A6SE, A6SG, A6NE, A6BE series doesn't correspond to the functional safety standard.

*2 Information related to the Korea Radio Law
This servo driver is a Class A commercial broadcasting radio wave generator not designed for home use. The user and dealer should be aware of this fact.

A 급 기기 (업무용 방송통신기자재)
이 기기는 업무용(A 급) 전자파적합기기로서 판매자 또는 사용자는 이 점을 주의하시기 바라며, 가정외의 지역에서 사용하는 것을 목적으로 합니다.
(대상기종 : Servo Driver)

Installation Environment

Use the servo driver in the environment of Pollution Degree 1 or 2 prescribed in IEC-60664-1 (e.g. Install the driver in control panel with IP54 protection structure.)

For [NF1] to [NF2], refer to the Table "Ferrite core" (P.414).
 * A6SE, A6SG, A6NE, A6BE is not provided with X3 terminal.

<Caution>

Use options correctly after reading Operating Instructions of the options to better understand the precautions. Take care not to apply excessive stress to each optional part.

Power Supply

100 V type (A-frame to C-frame)	Single phase, 100 V	+10 % -15 %	to	120 V	+10 % -15 %	50 Hz/60 Hz
200 V type (A-frame to D-frame)	Single/3-phase, 200 V	+10 % -15 %	to	240 V	+10 % -15 %	50 Hz/60 Hz
200 V type (E-frame to H-frame)	3-phase, 200 V	+10 % -15 %	to	240 V	+10 % -15 %	50 Hz/60 Hz

- (1) This product is designed to be used in over-voltage category (installation category) III of EN 61800-5-1:2007.
- (2) Use an insulated power supply of DC12 V to 24 V which has CE marking or complies with EN60950.

Circuit Breaker

Install a circuit breaker which complies with IEC Standards and UL recognized (Listed and marked) between power supply and noise filter. The short-circuit protection circuit on the product is not for protection of branch circuit. The branch circuit should be protected in accordance with NEC and the applicable local regulations in your area.

Noise Filter

When you install one noise filter at the power supply for multi-axes application, contact the manufacturer of the noise filter. If noise margin is required, connect 2 filters in series to emphasize effectiveness.

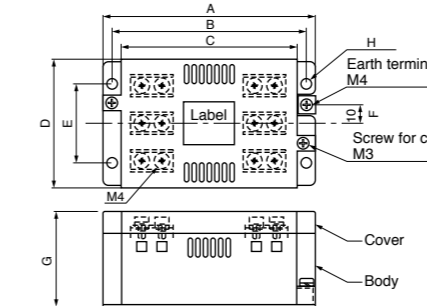

Options

Option part No.	Voltage specifications for driver	Manufacturer's part No.	Applicable driver (frame)	Manufacturer
DV0P4170	Single phase 100 V, 200 V	SUP-EK5-ER-6	A-frame and B-frame	Okaya Electric Ind.

Option part No.	Voltage specifications for driver	Manufacturer's part No.	Applicable driver (frame)	Manufacturer
DV0PM20042	3-phase 200 V	3SUP-HU10-ER-6	A-frame and B-frame	Okaya Electric Ind.
DV0P4220	Single phase 100 V, 200 V		C-frame	
DV0PM20043	3-phase 200 V	3SUP-HU30-ER-6	D-frame	
		3SUP-HU50-ER-6	E-frame	

[DV0PM20042, DV0P4220]

[DV0PM20043]

[Size]	A	B	C	D	E	F	G	H
DV0PM20042	115	105	95	70	43	10	52	5.5
DV0P4220	145	135	125	70	50	10	52	5.5
DV0PM20043	165	136	165	90	80	40	54	5.5

For single phase application, use 2 terminals among 3 terminals, leaving the remaining terminal unconnected.

Option part No.	Voltage specifications for driver	Manufacturer's part No.	Applicable driver (frame)	Manufacturer
DV0P3410	3-phase 200 V	3SUP-HL50-ER-6B	F-frame	Okaya Electric Ind.

<Remarks>

- Select a noise filter of capacity that exceeds the capacity of the power source (also check for load condition).
- For detailed specification of the filter, contact the manufacturer.

Noise Filter

• Recommended components

Part No.	Voltage specifications for driver	Rated current (A)	Applicable driver (frame)	Manufacturer
HF3080C-SZA	3-phase 200 V	80	G	SOSHIN ELECTRIC CO.,LTD.
HF3100C-SZA		100	H	

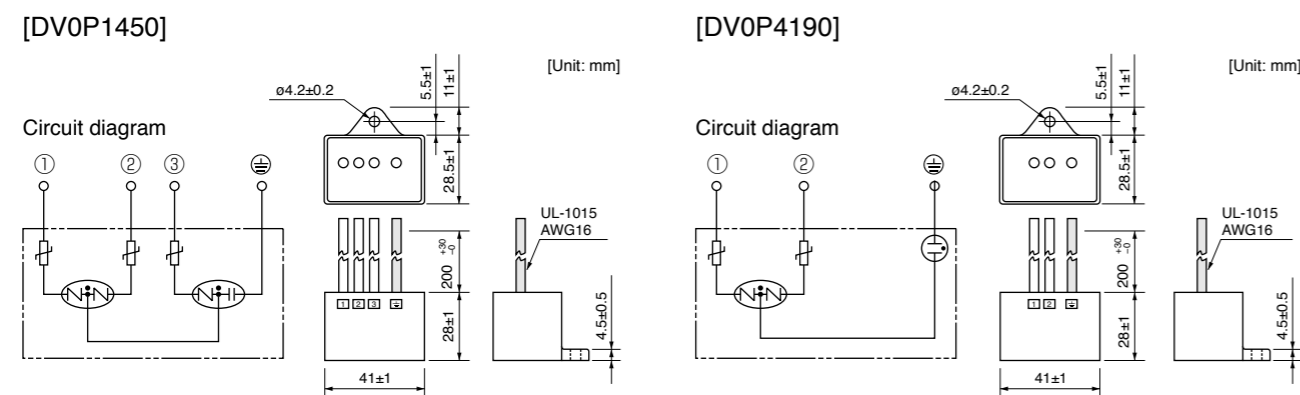

<Remarks>

- Select a noise filter of capacity that exceeds the capacity of the power source (also check for load condition).
- For detailed specification of the filter, contact the manufacturer.
- When you install one noise filter at the power supply for multi-axes application, contact the manufacturer of the noise filter.

Surge Absorber

Provide a surge absorber for the primary side of noise filter.

Option part No.	Voltage specifications for driver	Manufacturer's part No.	Manufacturer
DV0P1450	3-phase 200 V	R·A·V-781BXZ-4	Okaya Electric Ind.
DV0P4190	Single phase 100 V, 200 V	R·A·V-781BWZ-4	

<Remarks>

Remove this surge absorber when you perform dielectric test on the machine, or surge absorber might be damaged.

Ferrite core

■ Install ferrite core to power cable and motor cable

Symbol ¹	Cable Name	Applicable driver (frame)	Option part No.	Manufacturer's part No.	Manufacturer	Required number
NF1	Power cable	A, B, E	DV0P1460	ZCAT3035-1330	TDK Corp.	1
		G, H	—	RJ8095	Konno Kogyosho Co.Ltd	3
NF2	Motor cable	A, B, C, D, E	DV0P1460	ZCAT3035-1330	TDK Corp.	1
		F				2
		G, H				3
—	—	—	T400-61D	MICROMETALS	1	

*1 For symbols, refer to the Block Diagram "Installation Environment" (P.411).

- The number of turns is all 1.
- NF1 is not required for C frame, D frame, F frame.

<Remarks>

To connect the ferrite core to the connector XB connection cable, adjust the sheath length at the tip of the cable, as required.

<Caution>

Fix the ferrite core in order to prevent excessive stress to the cables.

Fig.1: DV0P1460 (Option) 4 pieces

Fig.3: T400-61D (Recommended components) 1 pieces

Fig.2: RJ8095 (Recommended components) 1 pieces

Manufacturer's part No.	Current value	100 kHz (μH)	Size [Unit: mm]							
			A	B	C	D1	D2	Core thickness	E	F
RJ8095	95 A	7.9±3	200	180	34	130	107	35	R3.5	7

Residual Current Device

Install a type B Residual current device (RCD) at primary side of the power supply.
Type B: Residual current device which detects a direct-current ingredient.

Grounding

- (1) Connect the protective earth terminal (⊕) of the driver and the protective earth terminal (PE) of the control box without fail to prevent electrical shocks.
- (2) Do not make a joint connection to the protective earth terminals (⊕). 2 terminals are provided for protective earth.

<Note>

For driver and applicable peripheral devices, refer to P.27 "Driver and List of Applicable Peripheral Devices".

Compliance to EU and EMC Directives

EU Directives

The EU Directives apply to all such electronic products as those having specific functions and have been exported to EU and directly sold to general consumers. Those products are required to conform to the EU unified standards and to furnish the CE marking on the products. MINAS AC Servos conforms to the EU Directives for Low Voltage Equipment so that the machine incorporating our servos has an easy access to the conformity to relevant EU Directives for the machine.

EMC Directives

MINAS Servo System conform to relevant standard under EMC Directives setting up certain model (condition) with certain locating distance and wiring of the servo motor and the driver. And actual working condition often differs from this model condition especially in wiring and grounding. Therefore, in order for the machine to conform to the EMC Directives, especially for noise emission and noise terminal voltage, it is necessary to examine the machine incorporating our servos.

Conformed Standards

Subject	Conformed Standard		
Motor	IEC60034-1	IEC60034-5 UL1004 CSA22.2 No.100	Conforms to Low-Voltage Directives
Motor and driver	EN50178	UL508C CSA22.2 No.14	Conforms to references by EMC Directives
	EN55011	Radio Disturbance Characteristics of Industrial, Scientific and Medical (ISM) Radio-Frequency Equipment	
	EN61000-6-2	Immunity for Industrial Environments	
	IEC61000-4-2	Electrostatic Discharge Immunity Test	
	IEC61000-4-3	Radio Frequency Electromagnetic Field Immunity Test	
	IEC61000-4-4	Electric High-Speed Transition Phenomenon/Burst Immunity Test	
	IEC61000-4-5	Lightening Surge Immunity Test	
IEC61000-4-6	High Frequency Conduction Immunity Test		
IEC61000-4-11	Instantaneous Outage Immunity Test

Composition of Peripheral Components

<Precautions in using options>

Use options correctly after reading operation manuals of the options to better understand the precautions. Take care not to apply excessive stress to each optional part.

Installation Environment

Use Minas driver in environment of Pollution Degree 1 or 2 prescribed in IEC-60664-1 (e.g. Install the driver in control panel with IP54 protection structure.)

Power Supply

100 V system	Single phase, 100 V	+10 % -15 %	to	115 V	+10 % -15 %	50 Hz/60 Hz
200 V system	Single phase, 200 V	+10 % -15 %	to	240 V	+10 % -15 %	50 Hz/60 Hz
200 V system	3-phase, 200 V	+10 % -15 %	to	240 V	+10 % -15 %	50 Hz/60 Hz

- (1) Use the power supply under an environment of Overvoltage Category II specified in IEC60664-1.
- (2) For a interface power supply, use the insulated one with 12 VDC to 24 VDC which conforms to CE Marking or EN Standards (EN60950).

Circuit Breaker

Connect a circuit breaker which conforms to IEC standards and is UL recognized (UL Listed, marked), between the power supply and the noise filter.

Noise Filter

When you install one noise filter in the power supply for multi axis application, consult with the manufacture of the filter.

Option part No.	Part No.	Manufacturer
DV0P4160	3SUP-HU10-ER-6	Okaya Electric Industries Co.

Surge Absorber

Install a surge absorber at primary side of the noise filter.

Option part No.	Driver voltage spec	Part No.	Manufacturer
DV0P1450	3-phase, 200 V	R·A·V-781BXZ-4	Okaya Electric

Option part No.	Driver voltage spec	Part No.	Manufacturer
DV0P4190	Single phase, 100 V, 200 V	R·A·V-781BWZ-4	Okaya Electric

<Remarks>

Remove this surge absorber when you perform dielectric test on the machine, or surge absorber might be damaged.

Ferrite core

Install ferrite core to all cables (Power line, motor cable, encoder cable, interface cable)

<Caution>

- Please fix a ferrite core to avoid excessive stress to the cable.
- When using multiple axes, noise generated from each driver might influence driver and peripheral equipment and result to malfunction. Please insert a ferrite core between driver and motor wires (U, V, W but grounding). (Please refer to P.415 "Composition of Peripheral Components".)

Option part No.	Part No.	Qty.	Manufacturer
DV0P1460	ZCAT3035-1330	4	TDK Corp.

Grounding

- (1) Connect the protective earth terminal of the driver () and protective earth terminal of the control panel (PE) without fail to prevent electrical shocks.
- (2) Do not co-clamp to the ground terminals (). Two ground terminals are provided.

Ground-Fault Breaker

Install a ground fault circuit breaker (RCD) to the primary side of the power supply. Please use B-type (DC sensitive) ground fault circuit breakers defined in IEC60947-2, JISC8201-2-2.

Conformity to UL Standards

Observe the following conditions of (1) and (2) to make the system conform to UL508C (File No. E164620).

- (1) Use the driver in an environment of Pollution Degree 2 or 1 prescribed in IEC60664-1. (e.g. Install in the control box with IP54 enclosure.)
- (2) Install a circuit breaker or fuse which are UL recognized (LISTED marked) between the power supply and the noise filter without fail.

AC Servo Motor Capacity Selection Software

We have prepared PC software "M-SELECT" for AC servo motor capacity selection. Consult our sales representative or authorized distributor.

• Three-step selection

1. Select components and specified values

Select appropriate mechanical parameter items and fill them with parameter values derived from the real machine.

To simulate the target machine as practical as possible, use maximum number of parameters available.

2. Enter operation pattern

Input the planned operation pattern that will contain [speed and rotation standard] or [absolute position standard] with optional settings such as S-acceleration/deceleration.

3. Select the motor

When the data required in step 1 and 2 above have been input, the software lists the motors, which will be appropriate to use with your machine. Select the motor that is best suitable for your machine application.

▶ Details of motor

Once the motor is selected, specifications of the motor and driver, and details of reason for determination are displayed and may be printed out.

Option Selection Software for AC Servo Motor

We have prepared PC software to enable fast, easy, and correct option selection, a complicated job without the software.

• Two procedures for option selection

1. Selection according to driver series and motor type

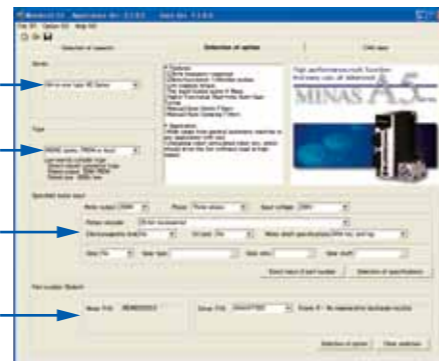

Suitable option can be selected by selecting driver series, motor type and motor specification through pull-down menu.

Driver series

Motor type

Motor specification

Model number input area

2. Entry of model number

If you know the model number based on the servo motor and driver currently used, enter the model number.

Tab

▶ Result of selection

Tab sheet specific to each of option model numbers is used for easier identification of the desired option.

* When you are using the motor capacity selection software, simply press [Option Selection] tab and the screen as shown right will appear.

Please download from our web site and use after install to the PC.

Organization of the System of Units

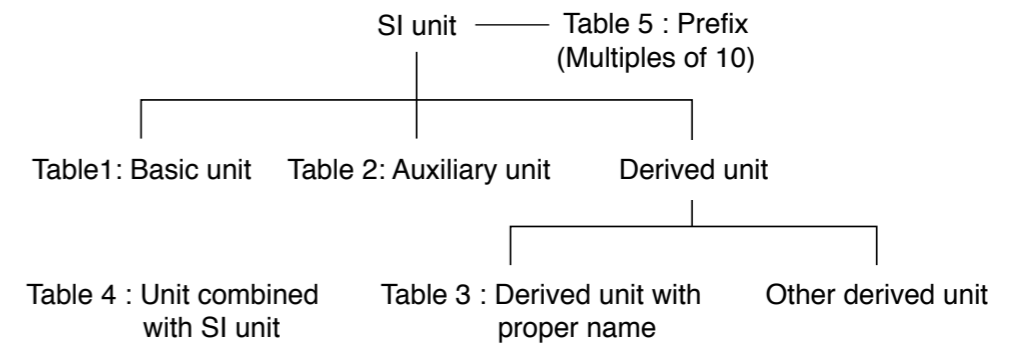

Table 1: Basic unit

Quantity	Name of unit	Symbol of unit
Length	meter	m
Weight	kilogram	kg
Time	second	s
Current	ampere	A
Thermodynamic temperature	kelvin	K
Amount of substance	mol	mol
Luminous intensity	candela	cd

Table 2: Auxiliary unit

Quantity	Name of unit	Symbol of unit
Plane angle	radian	rad
Solid angle	steradian	sr

Table 3: Major derived unit with proper name

Quantity	Name	Symbol of unit	Derivation from basic unit, auxiliary unit or other derived unit
Frequency	hertz	Hz	1 Hz = 1 s ⁻¹
Force	newton	N	1 N = 1 kg·m/s ²
Pressure, Stress	pascal	Pa	1 Pa = 1 N/m ²
Energy, Work, Amount of heat	joule	J	1 J = 1 N·m
Amount of work, Work efficiency, Power, Electric power	watt	W	1 W = 1 J/s
Electric charge, Amount of electricity	coulomb	C	1 C = 1 A·s
Electric potential, Potential difference, Voltage, Electromotive force	volt	V	1 V = 1 J/C
Electrostatic capacity, Capacitance	farad	F	1 F = 1 C/V
Electric resistance	ohm	Ω	1 Ω = 1 V/A
Electric conductance	siemens	S	1 S = 1 Ω ⁻¹
Magnetic flux	weber	Wb	1 Wb = 1 V·s
Magnetic flux density, Magnetic induction	tesla	T	1 T = 1 Wb/m ²
Inductance	henry	H	1 H = 1 Wb/A
Degree centigrade (Celsius)	degree centigrade (Celsius) / degree	°C	t °C = (t+273.15) K
Luminous flux	lumen	lm	1 lm = 1 cd·sr
Illuminance	lux	lx	1 lx = 1 lm/m ²

Table 4: Unit combined with SI unit

Quantity	Name	Symbol of unit
Time	minute	min
	hour	h
	day	d
Plane angle	degree	°
	minute	'
	second	"
Volume	liter	l, L
Weight	ton	t

Table 5: Prefix

Multiples powered to unit	Prefix	
	Name	Symbol
10 ¹⁸	exa	E
10 ¹⁵	peta	P
10 ¹²	tera	T
10 ⁹	giga	G
10 ⁶	mega	M

10 ²	hecto	h
10	deca	da
10 ⁻¹	deci	d
10 ⁻²	centi	c
10 ⁻³	milli	m
10 ⁻⁶	micro	μ
10 ⁻⁹	nano	n
10 ⁻¹²	pico	p
10 ⁻¹⁵	femto	f
10 ⁻¹⁸	atto	a

Quantity	Symbol of conventional unit	Symbol of SI unit and compatible unit	Conversion value
Length	μ (micron)	μm	1 μ = 1 μm (micrometer)
Acceleration	Gal	m/s ²	1 Gal = 10 ⁻² m/s ²
	G	m/s ²	1 G = 9.80665 m/s ²
Frequency	c/s, c	Hz	1 c/s = Hz
Revolving speed, Number of revolutions	rpm	s ⁻¹ or min ⁻¹ , r/min	1 rpm = 1 min ⁻¹
Weight	kgf	-	} Same value
Mass	-	kg	
Weight flow rate	kgf/s	-	} Same value
Mass flow rate	-	kg/s	
Specific weight	kgf/m ³	-	} Same value
Density	-	kg/m ³	
Specific volume	m ³ /kgf	m ³ /kg	Same value
Load	kgf	N	1 kgf = 9.80665 N
Force	kgf	N	1 kgf = 9.80665 N
	dyn	N	1 dyn = 10 ⁻⁵ N
Moment of force	kgf·m	N·m	1 kgf·m = 9.806 N·m
Pressure	kgf/cm ²	Pa, bar ⁽¹⁾ or kgf/cm ²	1 kgf/cm ² = 9.80665 × 10 ⁴ Pa = 0.980665 bar
	at (Engineering atmospheric pressure)	Pa	1 at = 9.80665 × 10 ⁴ Pa
	atm (Atmospheric pressure)	Pa	1 atm = 1.01325 × 10 ⁵ Pa
	mH ₂ O, mAq	Pa	1 mH ₂ O = 9.80665 × 10 ³ Pa
	mmHg	Pa or mmHg ⁽²⁾	1 mmHg = 133.322 Pa
	Torr	Pa	
Stress	kgf/mm ²	Pa or N/m ²	1 kgf/mm ² = 9.80665 × 10 ⁶ Pa = 9.80665 × 10 ⁶ N/m ²
	kgf/cm ²	Pa or N/m ²	1 kgf/cm ² = 9.80665 × 10 ⁴ Pa = 9.80665 × 10 ⁴ N/m ²
Elastic modulus	kgf/m ²	Pa or N/m ²	1 kgf/m ² = 9.80665 Pa = 9.80665 N/m ² 1 kgf/cm ² = 9.80665 × 10 ⁴ N/m ²
Energy, Work	kgf·m	J (joule)	1 kgf·m = 9.80665 J
	erg	J	1 erg = 10 ⁻⁷ J
Work efficiency, Power	kgf·m/s	W (watt)	1 kgf·m/s = 9.80665 W
	PS	W	1 PS = 0.7355 kW
Viscosity	PP	Pa·s	1 P = 0.1 Pa·s
Kinetic viscosity	St	mm ² /s	10 ⁻² St = 1 mm ² /s
Thermodynamic temperature	K	K (kelvin)	1 K = 1 K
Temperature interval	deg	K ⁽³⁾	1 deg = 1 K
Amount of heat	cal	J	1 cal = 4.18605 J
Heat capacity	cal/°C	J/K ⁽³⁾	1 cal/°C = 4.18605 J/K
Specific heat, Specific heat capacity	cal/(kgf·°C)	cal/(kgf·K) ⁽³⁾	1 cal/(kgf·°C) = 4.18605 J/(kg·K)
Entropy	cal/K	J/K	1 cal/K = 4.18605 J/K
Specific entropy	cal/(kgf·K)	J/(kg·K)	1 cal/(kgf·K) = 4.18605 J/(kg·K)
Internal energy (Enthalpy)	cal	J	1 cal = 4.18605 J
Specific internal energy (Specific enthalpy)	cal/kgf	J/kg	1 cal/kgf = 4.18605 J/kg
Heat flux	cal/h	W	1 kcal/h = 1.16279 W
Heat flux density	cal/(h·m ²)	W/m ²	1 kcal/(h·m ²) = 1.16279 W/m ²
Thermal conductivity	cal/(h·m·°C)	W/(m·K) ⁽³⁾	1 kcal/(h·m·°C) = 1.16279 W/(m·K)
Coefficient of thermal conductivity	cal/(h·m ² ·°C)	W/(m ² ·K) ⁽³⁾	1 kcal/(h·m ² ·°C) = 1.16279 W/(m ² ·K)
Intensity of magnetic field	Oe	A/m	1 Oe = 10 ³ / (4π) A/m
Magnetic flux	Mx	Wb (weber)	1 Mx = 10 ⁻⁸ Wb
Magnetic flux density	Gs, G	T (tesla)	1 Gs = 10 ⁻⁴ T

Note

(1) Applicable to liquid pressure. Also applicable to atmospheric pressure of meteorological data, when "bar" is used in international standard.

(2) Applicable to scale or indication of blood pressure manometers.

(3) "C" can be substituted for "K".

Flow of Motor Selection

1. Definition of mechanism to be driven by motor.

Define details of individual mechanical components (ball screw length, lead and pulley diameters, etc.)

<Typical mechanism>

Ball screw mechanism

Belt mechanism

Rack & pinion, etc.

2. Definition of operating pattern.

Acceleration/deceleration time, Constant-velocity time, Stop time, Cycle time, Travel distance

Note) Selection of motor capacity significantly varies depending on the operating pattern. The motor capacity can be reduced if the acceleration/deceleration time and stop time are set as long as possible.

3. Calculation of load inertia and inertia ratio.

Calculate load inertia for each mechanical component. (Refer to "General inertia calculation method" described later.)

Divide the calculated load inertia by the inertia of the selected motor to check the inertia ratio.

For calculation of the inertia ratio, note that the catalog value of the motor inertia is expressed as "× 10⁻⁴ kg·m²".

4. Calculation of motor velocity

Calculate the motor velocity from the moving distance, acceleration / deceleration time and constant-velocity time.

5. Calculation of torque

Calculate the required motor torque from the load inertia, acceleration/deceleration time and constant-velocity time.

6. Calculation of motor

Select a motor that meets the above 3 to 5 requirements.

Description on the Items Related to Motor Selection

1. Torque

(1) Peak torque

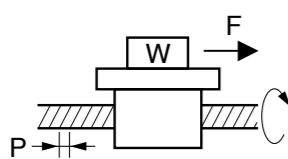

Indicate the maximum torque that the motor requires during operation (mainly in acceleration and deceleration steps). The reference value is 80% or less of the maximum motor torque. If the torque is a negative value, a regenerative discharge resistor may be required.

(2) Traveling torque, Stop holding torque

Indicates the torque that the motor requires for a long time. The reference value is 80% or less of the rated motor torque. If the torque is a negative value, a regenerative discharge resistor may be required.

Traveling torque calculation formula for each mechanism

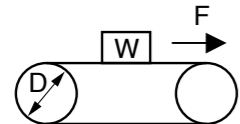

Ball screw mechanism

Traveling torque $T_f = \frac{P}{2\pi\eta} (\mu gW + F)$

W : Weight [kg] η : Mechanical efficiency
 P : Lead [m] μ : Coefficient of friction
 F : External force [N] g : Acceleration of gravity 9.8[m/s²]

Belt mechanism

Traveling torque $T_f = \frac{D}{2\pi\eta} (\mu gW + F)$

W : Weight [kg] η : Mechanical efficiency
 P : Pulley diameter [m] μ : Coefficient of friction
 F : External force [N] g : Acceleration of gravity 9.8[m/s²]

(3) Effective torque

Indicates a root-mean-square value of the total torque required for running and stopping the motor per unit time. The reference value is approx. 80% or less of the rated motor torque.

$$T_{rms} = \sqrt{\frac{T_a^2 \times t_a + T_f^2 \times t_b + T_d^2 \times t_d}{t_c}}$$

T_a : Acceleration torque [N·m] t_a : Acceleration time [s] t_c : Cycle time [s]
 T_f : Traveling torque [N·m] t_b : Constant-velocity time [s] (Run time + Stop time)
 T_d : Deceleration torque [N·m] t_d : Deceleration time [s]

2. Motor velocity

Maximum velocity

Maximum velocity of motor in operation: The reference value is the rated velocity or lower value. When the motor runs at the maximum velocity, you must pay attention to the motor torque and temperature rise. For actual calculation of motor velocity, see "Example of motor selection" described later.

3. Inertia and inertia ratio

Inertia is like the force to retain the current moving condition.

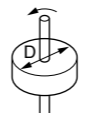

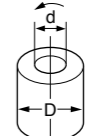

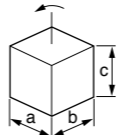

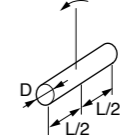

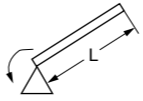

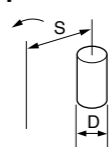

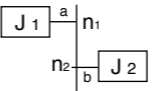

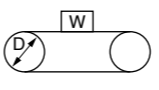

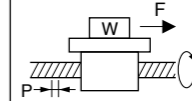

Inertia ratio is calculated by dividing load inertia by rotor inertia.

Generally, for motors with 750 W or lower capacity, the inertia ratio should be "20" or less. For motors with 1000 W or higher capacity, the inertia ratio should be "10" or less.

If you need quicker response, a lower inertia ratio is required.

(For example, when the motor takes several seconds in acceleration step, the inertia ratio can be further increased.)

General inertia calculation method

Shape	J calculation formula	Shape	J calculation formula
Disk 	$J = \frac{1}{8} WD^2$ [kg·m ²] W : Weight [kg] D : Outer diameter [m]	Hollow cylinder 	$J = \frac{1}{8} W(D^2 + d^2)$ [kg·m ²] W : Weight [kg] D : Outer diameter [m] d : Inner diameter [m]
Prism 	$J = \frac{1}{12} W(a^2 + b^2)$ [kg·m ²] W : Weight [kg] a, b, c : Side length [m]	Uniform rod 	$J = \frac{1}{48} W(3D^2 + 4L^2)$ [kg·m ²] W : Weight [kg] D : Outer diameter [m] L : Length [m]
Straight rod 	$J = \frac{1}{3} WL^2$ [kg·m ²] W : Weight [kg] L : Length [m]	Separated rod 	$J = \frac{1}{8} WD^2 + WS^2$ [kg·m ²] W : Weight [kg] D : Outer diameter [m] S : Distance [m]
Reduction gear 	Inertia on shaft "a" $J = J_1 + \left(\frac{n_2}{n_1}\right)^2 J_2$ [kg·m ²] n ₁ : A rotational speed of a shaft [r/min] n ₂ : A rotational speed of b shaft [r/min]		
Conveyor 	$J = \frac{1}{4} WD^2$ [kg·m ²] W : Workpiece weight on conveyor [kg] D : Drum diameter [m] * Excluding drum J	Ball screw 	$J = J_B + \frac{W \cdot P^2}{4\pi^2}$ [kg·m ²] W : Weight [kg] P : Lead J _B : J of ball screw

If weight (W [kg]) is unknown, calculate it with the following formula:

Weight W[kg]=Density ρ [kg/m³] x Volume V[m³]

Density of each material

Iron ρ =7.9 x 10³ [kg/m³] Aluminum ρ =2.8 x 10³ [kg/m³]

Brass ρ =8.5 x 10³ [kg/m³]

To Drive Ball Screw Mechanism

1. Example of motor selection for driving ball screw mechanism

- Workpiece weight WA = 10 [kg]
- Ball screw length BL = 0.5 [m]
- Ball screw diameter BD = 0.02 [m]
- Ball screw lead BP = 0.02 [m]
- Ball screw efficiency Bη = 0.9
- Travel distance 0.3[m]
- Coupling inertia Jc = 10 × 10⁻⁶ [kg·m²] (Use manufacturer-specified catalog value, or calculation value.)

2. Running pattern :

- Acceleration time ta = 0.1 [s]
- Constant-velocity time tb = 0.8 [s]
- Deceleration time td = 0.1 [s]
- Cycle time tc = 2 [s]
- Travel distance 0.3[m]

3. Ball screw weight

$$BW = \rho \times \pi \times \left(\frac{BD}{2}\right)^2 \times BL = 7.9 \times 10^3 \times \pi \times \left(\frac{0.02}{2}\right)^2 \times 0.5 = 1.24 \text{ [kg]}$$

4. Load inertia

$$JL = Jc + JB = Jc + \frac{1}{8}BW \times BD^2 + \frac{WA \cdot BP^2}{4\pi^2} = 0.00001 + (1.24 \times 0.02^2) / 8 + 10 \times 0.02^2 / 4\pi^2 = 1.73 \times 10^{-4} \text{ [kg}\cdot\text{m}^2\text{]}$$

5. Provisional motor selection

In case of MSMF 200 W motor : JM = 0.14 × 10⁻⁴ [kg·m²]

6. Calculation of inertia ratio

JL / JM = 1.73 × 10⁻⁴ / 0.14 × 10⁻⁴ Therefore, the inertia ratio is "12.3" (less than "30")
(In case of MSMF 100 W motor: JM = 0.048 × 10⁻⁴ Therefore, the inertia ratio is "36.0".)

7. Calculation of maximum velocity (Vmax)

$$\frac{1}{2} \times \text{Acceleration time} \times V_{\max} + \text{Constant-velocity time} \times V_{\max} + \frac{1}{2} \times \text{Deceleration time} \times V_{\max} = \text{Travel distance}$$

$$\frac{1}{2} \times 0.1 \times V_{\max} + 0.8 \times V_{\max} + \frac{1}{2} \times 0.1 \times V_{\max} = 0.3$$

$$0.9 \times V_{\max} = 0.3$$

$$V_{\max} = 0.3 / 0.9 = 0.334 \text{ [m/s]}$$

8. Calculation of motor velocity (N [r/min]) Ball screw lead per resolution: BP = 0.02 [m]

$$N = 0.334 / 0.02 = 16.7 \text{ [r/s]}$$

$$= 16.7 \times 60 = 1002 \text{ [r/min]} < 3000 \text{ [r/min]} \text{ (Rated velocity of MSMF 200 W motor)}$$

9. Calculation of torque

$$\text{Traveling torque } T_f = \frac{BP}{2\pi B\eta} (\mu g WA + F) = \frac{0.02}{2\pi \times 0.9} (0.1 \times 9.8 \times 10 + 0) = 0.035 \text{ [N}\cdot\text{m]}$$

$$\text{Acceleration torque } T_a = \frac{(JL + JM) \times 2\pi N [\text{r/s}]}{\text{Acceleration time [s]}} + \text{Traveling torque}$$

$$= \frac{(1.73 \times 10^{-4} + 0.14 \times 10^{-4}) \times 2\pi \times 16.7}{0.1} + 0.035 = 0.196 + 0.035 = 0.231 \text{ [N}\cdot\text{m]}$$

$$\text{Deceleration torque } T_d = \frac{(JL + JM) \times 2\pi N [\text{r/s}]}{\text{Deceleration time [s]}} - \text{Traveling torque}$$

$$= \frac{(1.73 \times 10^{-4} + 0.14 \times 10^{-4}) \times 2\pi \times 16.7}{0.1} - 0.035 = 0.196 - 0.035 = 0.161 \text{ [N}\cdot\text{m]}$$

10. Verification of maximum torque

Acceleration torque = Ta = 0.231 [N·m] < 1.91 [N·m] (Maximum torque of MSMF 200 W motor)

11. Verification of effective torque

$$T_{\text{rms}} = \sqrt{\frac{T_a^2 \times t_a + T_f^2 \times t_b + T_d^2 \times t_d}{t_c}}$$

$$= \sqrt{\frac{0.231^2 \times 0.1 + 0.035^2 \times 0.8 + 0.161^2 \times 0.1}{2}} = 0.067 \text{ [N}\cdot\text{m]} < 0.64 \text{ [N}\cdot\text{m]} \text{ (Rated torque of MSMF 200 W motor)}$$

12. Judging from the inertia ratio calculated above, selection of 200 W motor is preferable, although the torque margin is significantly large.

Example of Motor Selection

Example of motor selection for timing belt mechanism

- 1. Mechanism Workpiece weight WA = 2[kg] (including belt)
- Pulley diameter PD = 0.05[m]
- Pulley weight WP = 0.5[kg] (Use manufacturer-specified catalog value, or calculation value.)
- Mechanical efficiency Bη = 0.8
- Coupling inertia Jc = 0 (Direct connection to motor shaft)
- Belt mechanism inertia JB
- Pulley inertia JP

2. Running pattern

- Acceleration time ta = 0.1[s]
- Constant-velocity time tb = 0.8[s]
- Deceleration time td = 0.1[s]
- Cycle time tc = 2[s]
- Travel distance 1[m]

3. Load inertia JL = Jc + JB + JP

$$= Jc + \frac{1}{4}WA \times PD^2 + \frac{1}{8}WP \times PD^2 \times 2$$

$$= 0 + \frac{1}{4} \times 2 \times 0.05^2 + \frac{1}{8} \times 0.5 \times 0.05^2 \times 2 = 0.00156 = 15.6 \times 10^{-4} \text{ [kg}\cdot\text{m}^2\text{]}$$

4. Provisional motor selection

In case of MSMF 750 W motor : JM = 0.96 × 10⁻⁴ [kg·m²]

5. Calculation of inertia ratio

JL / JM = 15.6 × 10⁻⁴ / 0.96 × 10⁻⁴ Therefore, the inertia ratio is "16.3" (less than "20")

6. Calculation of maximum velocity (Vmax)

$$\frac{1}{2} \times \text{Acceleration time} \times V_{\max} + \text{Constant-velocity time} \times V_{\max} + \frac{1}{2} \times \text{Deceleration time} \times V_{\max} = \text{Travel distance}$$

$$\frac{1}{2} \times 0.1 \times V_{\max} + 0.8 \times V_{\max} + \frac{1}{2} \times 0.1 \times V_{\max} = 1$$

$$0.9 \times V_{\max} = 1$$

$$V_{\max} = 1 / 0.9 = 1.111[\text{m/s}]$$

7. Calculation of motor velocity (N [r/min])

A single rotation of pulley : $\pi \times PD = 0.157[\text{m}]$

$$N = 1.111 / 0.157 = 7.08[\text{r/s}]$$

$$= 7.08 \times 60 = 424.8[\text{r/min}] < 3000[\text{r/min}] \text{ (Rated velocity of MSMF 750 W motor)}$$

8. Calculation of torque

Traveling torque $T_f = \frac{PD}{2\gamma} (\mu g W_A + F) = \frac{0.05}{2 \times 0.8} (0.1 \times 9.8 \times 3 + 0)$

$$= 0.061[\text{N}\cdot\text{m}]$$

Acceleration torque $T_a = \frac{(J_L + J_M) \times 2\pi N[\text{r/s}]}{\text{Acceleration time}[\text{s}]} + \text{Traveling torque}$

$$= \frac{(15.6 \times 10^{-4} + 0.96 \times 10^{-4}) \times 2\pi \times 7.08}{0.1} + 0.061$$

$$= 0.736 + 0.061 = 0.797[\text{N}\cdot\text{m}]$$

Deceleration torque $T_d = \frac{(J_L + J_M) \times 2\pi N[\text{r/s}]}{\text{Deceleration time}[\text{s}]} - \text{Traveling torque}$

$$= \frac{(15.6 \times 10^{-4} + 0.96 \times 10^{-4}) \times 2\pi \times 7.08}{0.1} - 0.061$$

$$= 0.736 - 0.061 = 0.675[\text{N}\cdot\text{m}]$$

9. Verification of maximum torque

Acceleration torque $T_a = 0.797[\text{N}\cdot\text{m}] < 7.1[\text{N}\cdot\text{m}]$ (Maximum torque of MSMF 750 W motor)

10. Verification of effective torque

$$T_{\text{rms}} = \sqrt{\frac{T_a^2 \times t_a + T_f^2 \times t_b + T_d^2 \times t_d}{t_c}}$$

$$= \sqrt{\frac{0.797^2 \times 0.1 + 0.061^2 \times 0.8 + 0.675^2 \times 0.1}{2}}$$

$$= 0.237 [\text{N}\cdot\text{m}] < 2.4 [\text{N}\cdot\text{m}] \text{ (Rated torque of MSMF 750 W motor)}$$

11. Judging from the above calculation result, selection of MSMF 750W motor is acceptable.

Request for motor selection I : Ball screw drive

1. Driven mechanism and running data

- 1) Travel distance of the work load per one cycle mm
- 2) Cycle time s
(Fill in items 3) and 4) if required.)
- 3) Acceleration time s
- 4) Deceleration time s
- 5) Stopping time s
- 6) Max. velocity mm/s
- 7) External force N
- 8) Positioning accuracy of the work load mm
- 9) Total weight of the work load and the table kg
- 10) Power supply voltage
- 11) Diameter of the ball screw
- 12) Total length of the ball
- 13) Lead of the ball screw

14) Traveling direction (horizontal, vertical etc.)

2. Other data (Fill the details on specific mechanism and its configurations in the following blank.)

Company name : _____

Connection Between Driver and Controller

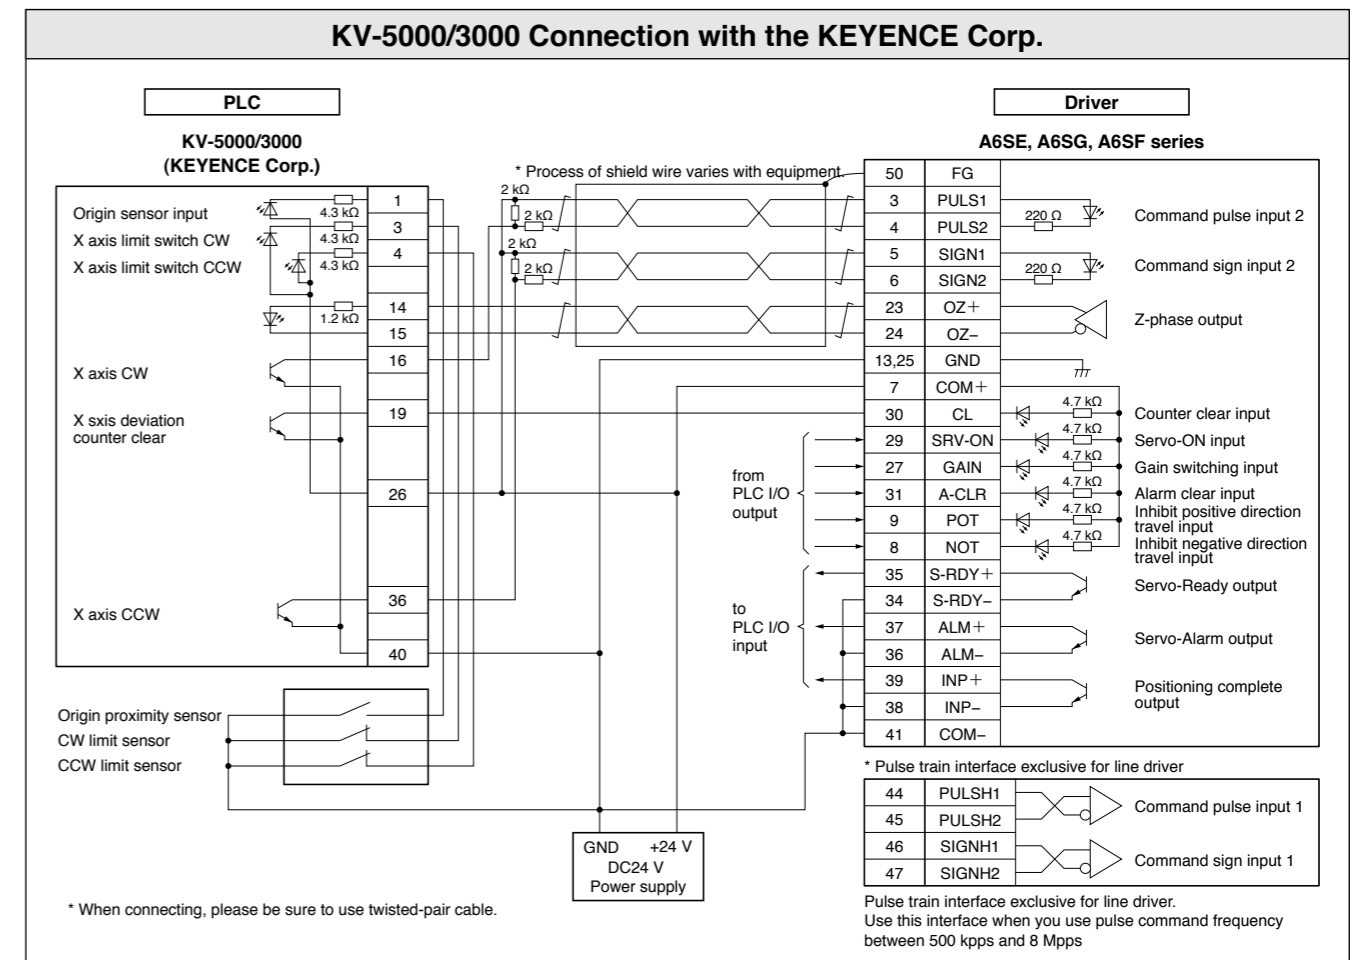

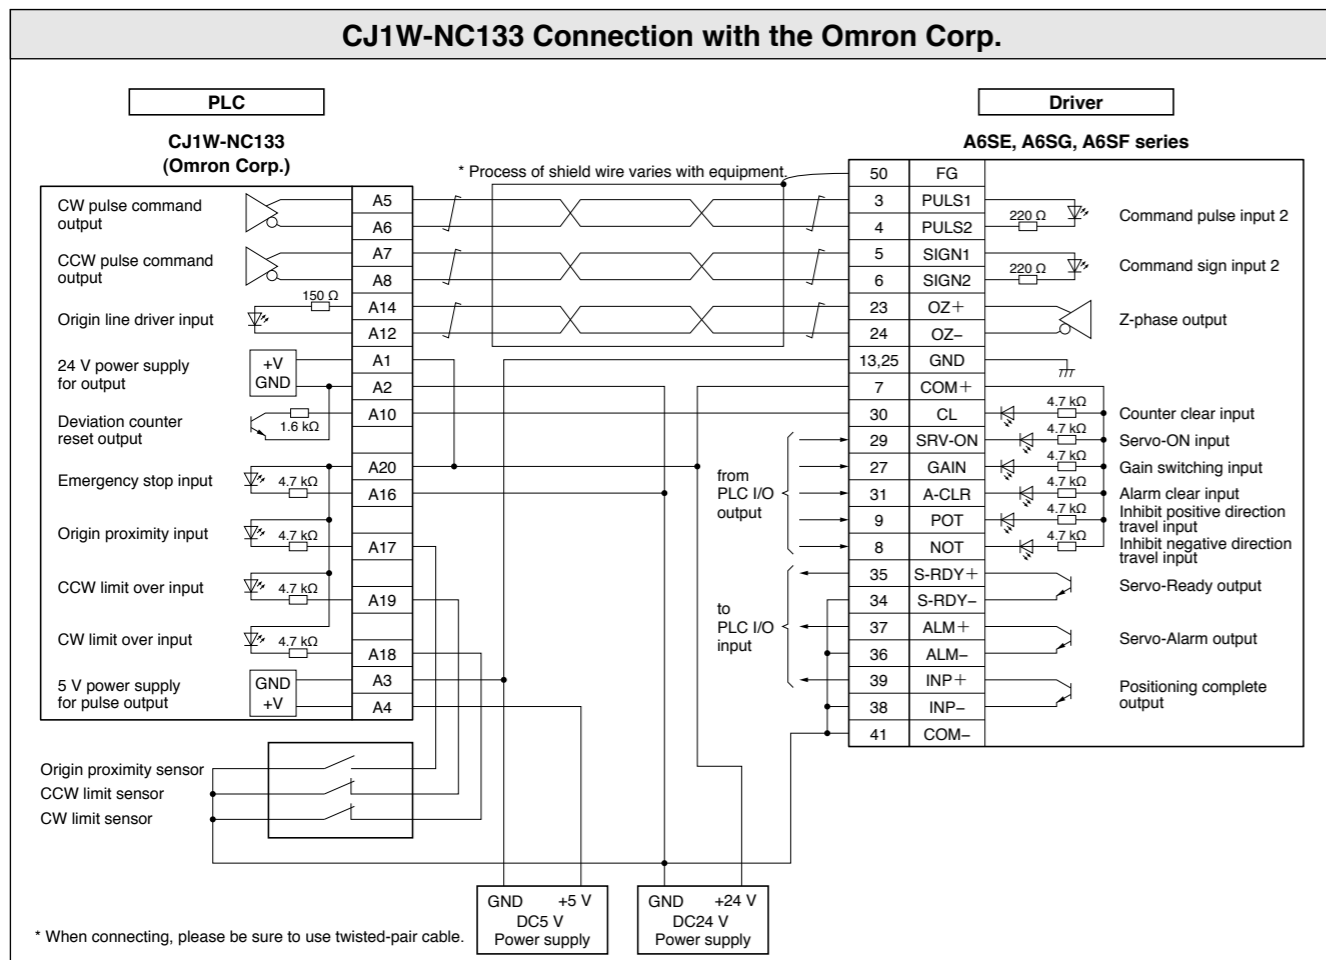

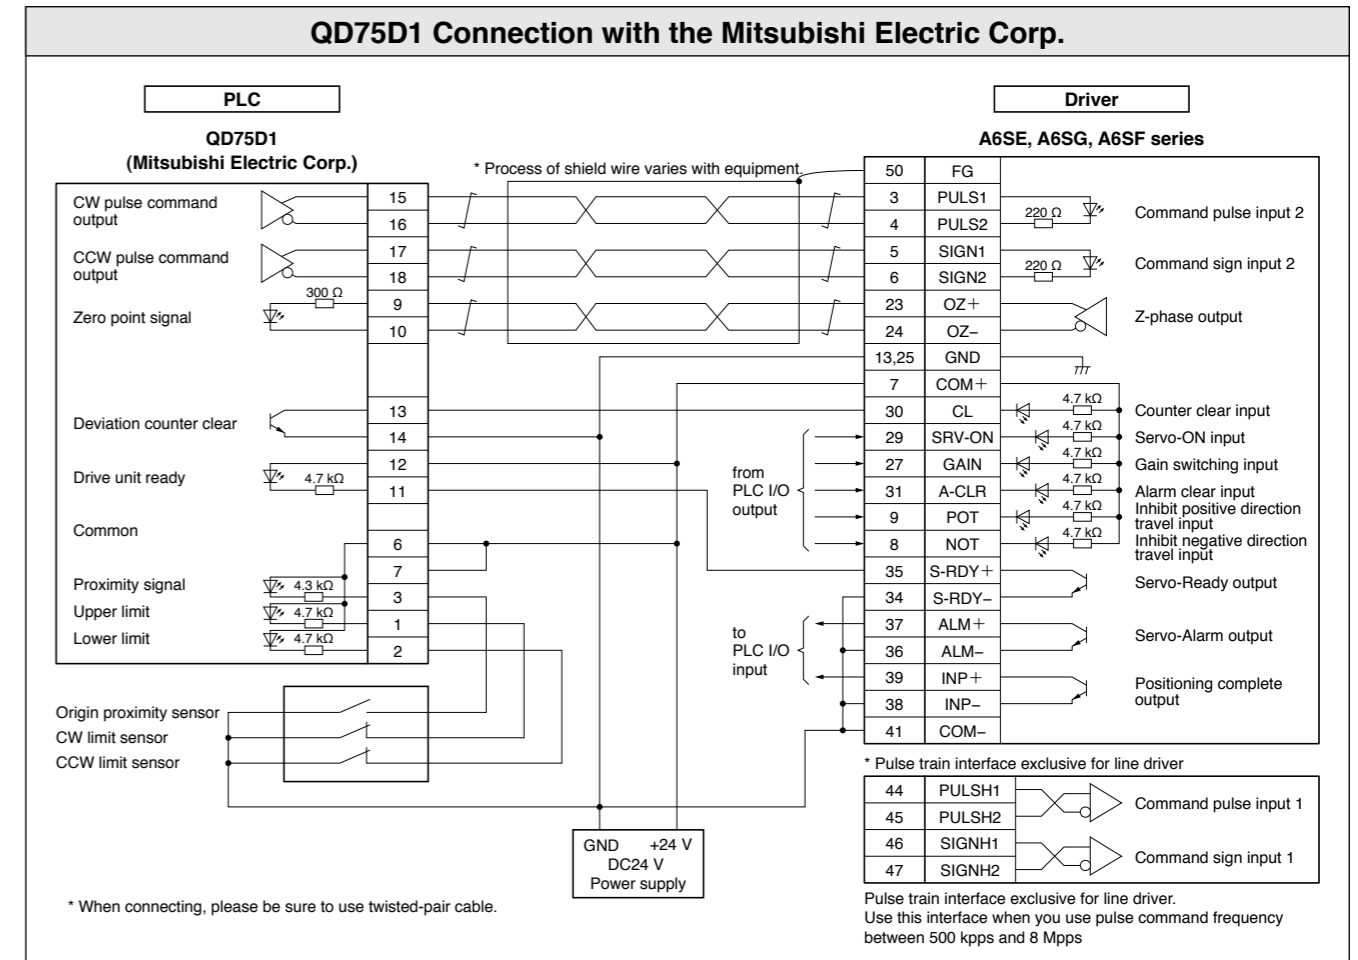

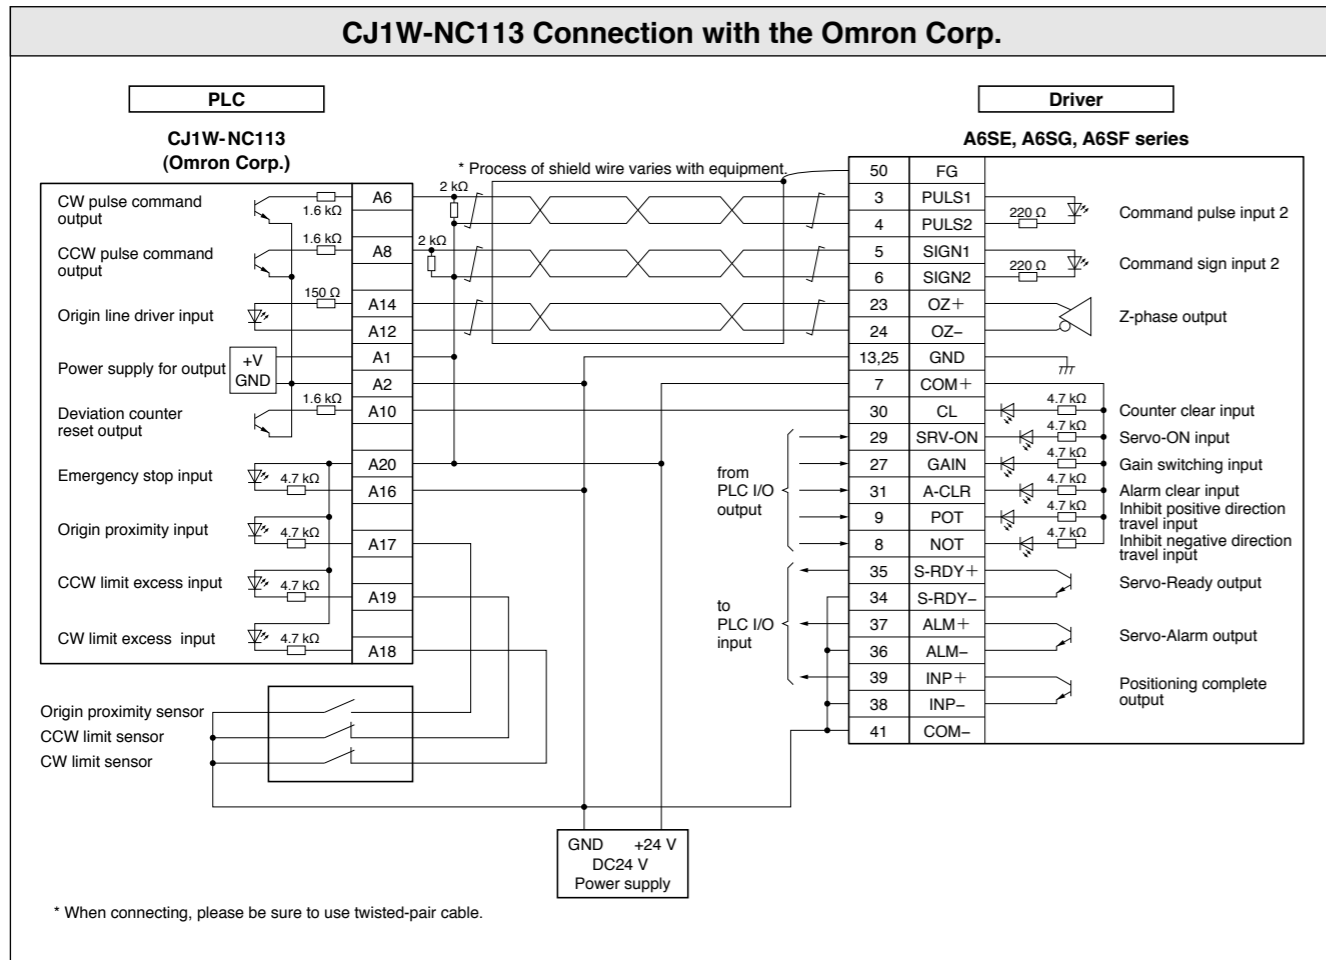

FP7-AFP7PP02L(2-axes) AFP7PP04L(4-axes) Connection with the Panasonic devices SUNX.

AFP0HPG01L(1-axes)/AFP0HPG02L(2-axes) Connection with the Panasonic devices SUNX.

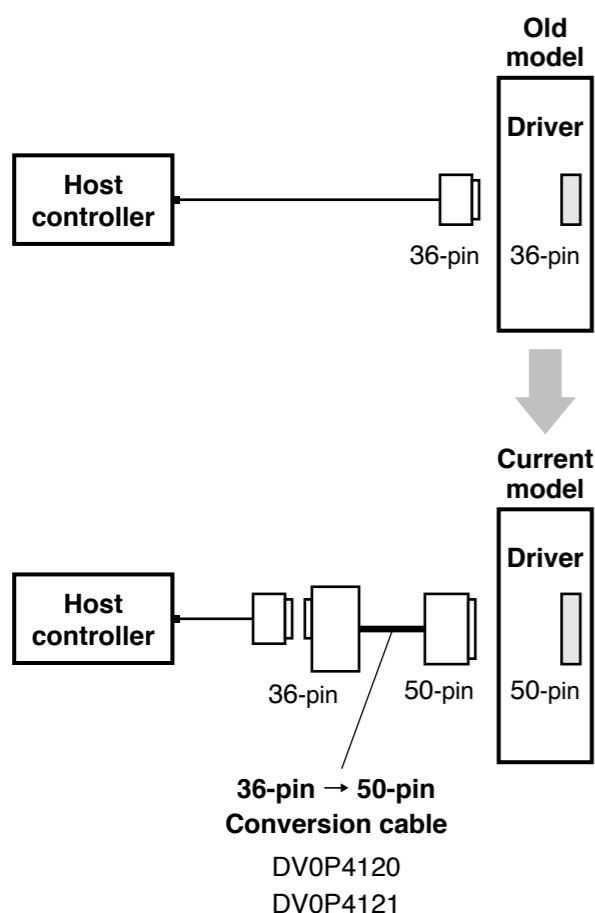

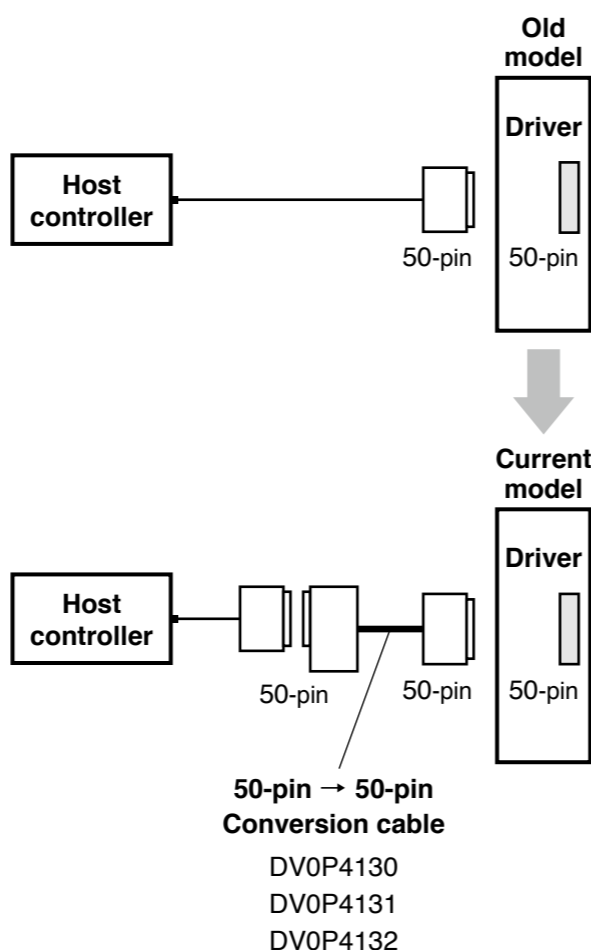

For easier replacement of old driver (MINAS X/XX/V series) with A6 series, use the interface conversion connector.

<36-pin → 50-pin>

<50-pin → 50-pin>

When selecting the cable, refer to the table below because the part number of the cable is specific to the control mode of the old model.

Old model	Control mode	Conversion cable part No.	Conversion wiring table
X series XX series (36-pin)	Position/velocity control	DV0P4120	P.440
	Torque control	DV0P4121	
V series (50-pin)	Position control	DV0P4130	P.441
	Velocity control	DV0P4131	
	Torque control	DV0P4132	

* For external dimensions, refer to P.322.

Panasonic[®]

Operation Manual

AC servo driver MINAS series

Set up support software

PANATERM Ver. 6.0

(For Windows[®] 8.1/Windows[®] 10)

We really appreciate that you have demand the Panasonic AC servo-driver MINAS series setup supporting software PANATERM Ver.6.0.

Please be sure to read this manual cautiously and use this product appropriately. Especially, please be sure to read “Safety Precaution (P.2 - 3)” before using this product and use this product safely.

REVISIONS

Revision History of Operation Manual

Date	Page	Rev	Description	Signed
Oct. 30, 2009		0.05	Initial version	-
Dec. 28, 2009	P9, 11, 17, 18, 22, 23, 26, 37, 40, 43, 45, 46, 49, 50, 57-59, 62, 67, 71, 73, 81	0.06	Correcting errors	
	P20		Adding the "Welcome" screen	
	P25, 27		Adding "Decimal point is displayed"	
May 10, 2010	P1, 5	0.07	Correcting errors	
Mar. 8, 2011	P7, 10	1.00	Adding Korean as a supported language	
	P36, 43, 46, 96		Adding a description on "Information"	
	P46, 54		Adding the "Parameter" tab	
	P77		Correcting a description on setting parameters of the protection function	
	P84		Adding "Auto servo on"	
	P102-108, 134		Adding an item for "Setup Wizard"	
	P109-123, 135		Adding an item for "Fit Gain"	
	P125		Adding "Cannot start PANATERM"	
P126	Adding "The explanation of parameter is unkind"			
May 31, 2011	P1, 7, 8	1.01	Adding Windows 7	
	P7		Adding information on the MINAS-A5N series	
Aug. 9, 2011	P7, 10, 125	1.02	Adding a description on Windows 64-bit version	
	P132		Adding "Operation doesn't reach at the speed"	
Sep. 6, 2011	P7	1.03	Adding information on the MINAS-A5E series	
	P26, 28, 128		Changing "Decimal point is displayed" to "Display - Set value description"	
June 19, 2012	P6-8, 12, 17-18, 22-30, 138-140, 142, 148,	1.04	Adding descriptions on the RS232 communication	
	P7		Adding information on the MINAS - A5NL series	
Apr. 26, 2013	P7	1.05	Adding information on the MINAS-A5II series	
	P16		Adding "Fit gain measure result file (filename.fit5)" to the list of file extensions	
	P27, 124, 158, 161, 165, 168		Changing "Fit gain screen" → "Fit gain screen (Standard)"	
July 7, 2014	P138-154, 158, 161, 164, 165, 167, 169	1.06	Adding descriptions on the "Fit gain screen (2 degrees of freedom control)"	
	P1, 8-9, 12, 14, 172		Stopping the support for Windows XP due to the end of Microsoft support for Windows XP, and starting the support for Windows 8.	
	P7, 24, 26		Adding information on the MINAS-A5B, MINAS-A5ND1, and MINAS-A5L04 (LA4) series	
	P30, 33-38		Adding the function of series definition settings to simplify the support for special products	
	P15, 28-29, 162-169, 185		Adding the object editor function	
June 1, 2015	P174, 178-181	1.09	Adding a description on troubleshooting	
	P7, 8, 20, 24, 33, 36, 37		Expansion of the scope of model codes supporting MINAS-A5B series	
Oct. 28, 2015	P1, 10, 11, 19	1.11	Changing "PANATERM Ver.5.0" to "PANATERM Ver.6.0"	
	P7, 8, 26, 27		Adding information on the MINAS-A5BL series	
	P7, 8, 24, 26, 34, 38, 64, 73, 81, 101, 151, 184		Adding information on the MINAS-A6 series	
	P15, 26, 27, 29, 30, 171-184, 188, 190, 198-202		Adding a description on added functions, which are the battery refresh, the block operation editor, and the block operation monitor	

Note) The page number (Page) is the current page number at the time of revision.

REVISIONS

Revision History of Operation Manual

Date	Page	Rev	Description	Signed
Dec. 11, 2015	P7, 8	2.00	Updating the dates for series	
Dec. 25, 2015	P7, 8, 27, 28	2.01	Adding information on the MINAS-A6N series	
Jan. 8, 2016	P7, 8	2.02	Updating the information on the MINAS-A5B series	
Oct. 12, 2016	P1, 9, 10	2.03	Adding a description on the support for Windows 10	
	P8		Expansion of the scope of model codes supporting MINAS-A6N series	
	P8, 25, 27, 28, 35, 38, 39		Adding information on the MINAS-A6L series	
	P16		Adding file extensions for the waveform graphic expanded function	
	P30, 31		Adding descriptions on the added functions and deterioration diagnosis information	
June 2, 2017	P4-9, 13, 16, 19, 22, 23, 27, 33, 35-42, 101, 108, 134, 143, 158, 212, 213, 215,	3.00	Adding a description on Wireless LAN	
	P7, 27, 29, 30, 46, 47, 177, 178		Adding information on the MINAS-A6B, and MINAS-A6NL series	
	P30-34, 205-211, 216-218, 220-231		A description is added on the additional function, RTEX communication setting screen.	
	P72, 101, 126, 131, 134, 136, 143, 158, 176, 184, 187, 195, 198, 205		Adding a note on the function that cannot be performed during RS232 communication	
	P85, 86, 92, 93, 98, 99, 216, 218, 221		Adding a description on the support of longer sampling cycles of waveform graphics	
	P128, 129, 224		Adding a description on the RTEX communication error counter monitoring function	
	P198-204, 227-231		Adding chapters for the screen operation of the deterioration diagnosis function and trouble shooting	
	P232		Adding a description on the post-sale service	
July 3, 2017	P7	3.01	Updating the month and year in the note	
	P39-40		Correct errors related to the wireless LAN / Driver information set-up	
Nov. 17, 2017	P7	3.02	Updating the information on the MINAS-A6B series	
May. 17, 2018	P7, 30-31	3.03	Adding information on the MINAS-A6 (V-frame) series	
	P22-25		Adding a description on the Nickname setting screen	
	P216		Adding a description on troubleshooting	
July. 31, 2018	P6-7, 30-31	3.04	Adding information on the MINAS-A5MN and MINAS-A6BL series.	
	P31, 33-37, 215-216, 221, 223, 226, 230-237		A description is added on the additional function, Magnetic pole position estimation results copying screen.	
	P31, 161-164, 168, 233		Adding descriptions on the Fit gain screen (2 degrees of freedom control)	
Oct. 26, 2018	P31, 161	3.05	Adding descriptions on the Fit gain screen (2 degrees of freedom control)	
	P146		Adding descriptions on the Fit gain screen (Standard)	
Mar. 15, 2019	P3, 26, 34, 39, 64-65, 225, 229-230, 236	3.06	Correcting errors	
	P7		Updating the month and year in the note	

Note) The page number (Page) is the current page number at the time of revision.

REVISIONS

Revision History of Operation Manual

Date	Page	Rev	Description	Signed
May 15, 2019	P5, 19, 42	3.07	Added the United States, Taiwan, and Korea as regions that can support wireless LAN.	
	P7		Updating the month and year in the note	
	P36		Correction Removed the block operation monitor described in the function that cannot be opened simultaneously during degradation diagnosis.	
	P238		Update Contact point for repairs information	
Jan. 10, 2020	P7	3.08	Updating the month and year in the note	
	P8		Correcting errors	
Mar. 11, 2020	P5, 19, 42, 43	3.09	Correct errors related to the wireless LAN / Driver information set-up	
	P7		Updating the month and year in the note	
	P41, 44		Updating the image of the wireless LAN / Driver information set-up screen	
Nov. 12, 2020	P1, 8-9	3.10	Stopping the support for Windows Vista, Windows 7 due to the end of Microsoft support for Windows Vista, Windows 7.	
	P2		Added mark description	
	P3		Added a note depending on the state of the PC	
	P7		Updating the month and year in the note	
	P8, 19, 42		Added a note about WPA	
	P8, 18, 25-31, 36, 38, 65, 67, 71, 74, 78, 82-83, 85, 89-90, 92, 96-99, 105, 109, 113, 115-116, 123, 132, 135, 142, 149, 159, 194, 200, 208, 228, 234		Correcting errors	
	P9		Update the contents of <Notes>	
	P10, 14, 16, 20-22, 25-28, 31, 34, 36-38, 43, 45, 47-49, 51-53, 56-61, 68-70, 73-83, 88, 92-93, 95-96, 98, 100-101, 103-104, 111-112, 114, 116-122, 124-127, 129-131, 134-135, 137-144, 147-148, 150-152, 155-160, 162-181, 185, 189, 191, 195, 197		Fixed to the description of Windows 10	
	P11		Rename shortcut	
	P12		Added notes about installing Visual Studio 2013	
P12, 218		Added notes about installing Microsoft Access Database Engine		
P15		Add description of object comparison file		
P17		Removed description of USB multi-axis connection		
P29-30		Updated list of useable function		
P30, 119, 229		Added content related to analysis after frequency characteristic measurement		
P72		Added a note about control mode		
P76		Added notes about Real time Auto Tuning Custom Setting		
P92-94, 176-177		Change the numbering of image areas		

Note) The page number (Page) is the current page number at the time of revision.

Safety Precaution

Please keep without fail

Instructions to be observed to avoid personal injury and property damage are given in the following way.

Please keep it without fail

The degree of injury and damage caused by failure in observing the instructions or improper usage is indicated in the following format.

Caution

Indicates a potentially hazardous situation which may result in injury or only property damage.

The following pictorial display explains the types of content to be protected.

This indication shows “prohibition”.

This indication shows “imposition” to be done.

Caution

The communication cable or wireless LAN dongle should not be connected or cut during the driver power supply turned on.

It may cause injury, breakdown or damage.

The communication cable or wireless LAN dongle should not be cut under the condition of this software turned on. Also, don't put your PC to sleep, hibernate, or screen saver.

It may cause injury, breakdown or damage.

On modifying parameters of the driver, please do it after reading the manual of the driver or technical reference carefully.

It may cause injury, breakdown or damage.

Trial Run, Z phase search, and frequency characteristics measurement accompanies motor operation. Please execute it after securing surrounding safety without fail.

It may cause injury, breakdown or damage.

Software License Agreement

Panasonic Corporation (“PANASONIC”) grants to you a license to use this Software on condition that you accept this Agreement. You must read this Software License Agreement (this “Agreement”) carefully before using this Software. Only in case that you accept this Agreement, you may start your use of this Software.

Your unsealing the package of this Software, or your downloading, installing or launching this Software or the like shall be deemed as your acceptance of this Agreement.

The Software includes not only proprietary computer programs owned by or licensed by PANASONIC but also open source software programs. As for the open source software programs, refer to the detailed terms and conditions thereof shown in the installation package of the Software. Should a discrepancy arise between any of the terms of this Agreement and any open source software program license statement, the open source software program license statement shall take precedence over this Agreement.

Article 1 Grant of License

PANASONIC hereby grants to you a non-exclusive license to use this Software only in combination with PANASONIC product(s) specified in the manual of this Software (the “Product”) in accordance with the terms of this Agreement. You may not use this Software in connection with products of any third party other than PANASONIC.

Article 2 Restrictions

You may NOT:

- (1) Modify, reverse engineer, decompile, or disassemble this Software,
- (2) Use this Software by methods or for purposes other than those specified in the manual of this Software provided by PANASONIC, nor
- (3) Distribute, rent, lease or otherwise transfer this Software to any third party; provided, however, that you may assign the rights to use this Software under this Agreement along with the Product on the condition that the assignee agrees to be bound by all the terms of this Agreement. In the case of such assignment, you must deliver any and all the copies of this Software and all the accompanying materials to the assignee and you may not retain any copies of this Software including backups.

Article 3 Disclaimer

3-1. PANASONIC HEREBY DISCLAIMS ALL OTHER WARRANTIES ON THIS SOFTWARE, EITHER EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR PARTICULAR PURPOSE, AND

NON-INFRINGEMENT OF THIRD PARTY RIGHTS.

- 3-2. UNDER NO CIRCUMSTANCES SHALL PANASONIC BE LIABLE FOR ANY DAMAGES (INCLUDING DIRECT, INDIRECT, INCIDENTAL, CONSEQUENTIAL OR SPECIAL OR WHATSOEVER) ARISING OUT OF THE USE OF THIS SOFTWARE, INABILITY TO USE THIS SOFTWARE, DEFECTS IN THIS SOFTWARE (e.g., BUGS, SECURITY HOLES, AND MALFUNCTION), OR OTHERWISE IN CONNECTION WITH THIS SOFTWARE.

Article 4 Term

- 4-1. This Agreement shall come into effect upon your unsealing the package of this Software, or your downloading, installing or launching this Software or the like.
- 4-2. PANASONIC may terminate this Agreement immediately, if you breach any of the provisions of this Agreement.
- 4-3. You shall, at your own costs, return, delete or destroy this Software and any of its copies within four (4) weeks after termination of this Agreement.

Article 5 Export Control

You shall comply with all laws and regulations regarding export control under any competent jurisdiction, including but not limited to the Japanese Foreign Exchange & Foreign Trade Control Law, the export control regulations based on resolutions of the United Nations Security Council, etc. If any license or appropriate approval from a governmental authority is required under the applicable laws, you may not export this Software without such approval to any countries either directly or indirectly. Furthermore, you shall neither use nor sell this Software for military purposes either directly or indirectly.

Article 6 Intellectual Property Rights

Except the open source software program, all intellectual property rights in this Software, including the copyright, belong to PANASONIC and/or the licensors of PANASONIC.

Article 7 Upgrade of this Software

- 7-1. Release of future upgrades or updates of this Software is not guaranteed and left to the sole discretion of PANASONIC. Furthermore, PANASONIC may charge fees for upgrading or updating of this Software.
- 7-2. If any upgrades or updates are provided to you either for fees or for free, such upgrades or updates shall be deemed as a part of this Software and shall be governed by this Agreement, unless PANASONIC designates otherwise at the time of provision of such upgrades or updates.

Article 8 Limitation on Liability

AGGREGATE LIABILITIES OF PANASONIC IN CONNECTION WITH THIS AGREEMENT OR THIS SOFTWARE SHALL IN NO EVENT EXCEED TEN THOUSAND (10,000) YEN.

Article 9 Governing Law and Jurisdiction

9-1. This Agreement shall be governed by the laws of Japan.

9-2. Should any dispute arise from or in connection with this Agreement, Osaka District Court, Japan shall exclusively have the jurisdiction over such dispute.

This Software consists of the following types of software.

(1) The software developed independently by PANASONIC

(2) The software owned by and licensed by the third party

(3) This product includes software developed by the OpenSSL Project for use in the OpenSSL Toolkit (<http://www.openssl.org/>).

Software in categories (3) above is distributed with the expectation of effectiveness as a single piece of software, but there is no guarantee provided, including implied guarantees regarding viability as a product and/or suitability for specific purposes. For details, Please refer to the detailed terms and conditions thereof shown in the installation package of this Software.

1. Initially

Notes for safety issues

This software runs on “Windows”, and performs communications between personal computers and MINAS series driver.

MINAS series have functions to perform communications with commercially available personal computers with USB cables.

MINAS series drivers supporting wireless LAN can make wireless communication by connecting to a Panasonic optional device:

Wireless LAN dongle (DV0PM20105). Moreover in a part of series has the function to perform RS232 communication with RS232 cable. And can set parameters of the drivers, or can monitor control situations using a PC screen and mouse. When using the device, also read the operation manuals and technical publications on the driver main unit and wireless LAN dongle.

Microsoft and Windows is registered trademark of Microsoft Corporation in the United States and other countries.

Other company's names, product's names and so on are each company's registered marks.

Notes 1) The wireless LAN dongle is currently not available.

2. System Construction

Confirming applicable drivers

This software is for our AC servo driver MINAS series. It is not available for other products. Applicable driver's model names and series are as below.

Series	Model name	USB	RS232	Wireless
MINAS - A5 series	M * DH * * * * *	✓	✓	
	M * DH * * * * * E	✓		
MINAS - A5B series	M * DH * * * * * B01	✓		
	M * DH * * * * * B03			
	M * DH * * * * * B21			
	M * DH * * * * * BA1			
	M * DH * * * * * BA3			
	M * DH * * * * * BD1			
MINAS - A5BL series	M * DH * * * * * B91	✓

Models of drivers can be identified with the character of * in the model name above.

(The characters of * are defined model by model.)

Notes 1) That is information on the day of Jan. 2022. Please check with the shop you buy from if this software is applied to the drive you use.
Notes 2) Among the series that support a wireless LAN listed in the above table, drivers of the October 2016 lot and later support wireless LAN. Check the Panasonic website for the latest support status.

Needed system construction

To use this software, equipment which satisfy the conditions below are needed. Please refer to the operation manual attached to the each equipment, and then construct the system. The software may not be operated with a different environment from recommended one.

Personal Computer (PC)

Operation system	Windows 8.1(32bit version, 64bit version) Windows 10(32bit version, 64bit version) Japanese, English(US), Chinese(Simply), Korean version of the OS above
CPU	Follow operating system recommendations
Memory	Follow operating system recommendations
Hard disk	512MB or more
Communication	USB port Wireless LAN adapter Note) A wireless LAN adapter is required for wireless connections. COM port (Communication speed 2400bps - 115,200bps) Note) A COM port is required when using RS232 communication. Communication speed recommends not less than 9600 bps.

Wireless network

Wireless LAN standards	IEEE802.11b (Maximum rate: 11Mbps) IEEE802.11g (Maximum rate: 54Mbps) IEEE802.11n (Maximum rate: 300Mbps)
Frequency band	2.4GHz band
Channel	1ch to 13ch
Operation mode	Infrastructure mode
Security	WPA-PSK (AES) Note) When using WPA, update the key in about 2 minutes to ensure security. WPA2-PSK (AES)

Display

Resolution	1024×768 PIXEL or more
Color number	24bit color (True Color) or more

<Notes>

- Windows is needed to be prepared by customers.
- To use different OS from ones above, customers need to check operations.
- PANATERM should be used in condition that initial setting of Windows is renewed into the newest one.
- Using with other applications, operation of PANATERM may become unstable. Please use PANATERM solely.
- All users can operate the servo driver with PANATERM. To prevent dangerous operations, do not leave the PC with PANATERM installed in a state where it can be operated by a third party.

<Notes>

- Not guaranteed with other OS.
- Please check the operation by customers when used with different system environment from ones above.
- This product is performing checking of operations by Windows 8.1 and Windows 10. The operation may be different on other versions.
- This product is not applied to indication on multiple displays.
- In case two or more PANATERM are running, all operations cannot be guaranteed.
- Illustrations/screens may be different from actual cases.
- In conjunction with that Microsoft has ended all support for Windows XP (United States time) April 8, 2014, we end support for PANATERM in Windows XP.
- In conjunction with that Microsoft has ended all support for Windows Vista (United States time) April 11, 2017, we end support for PANATERM in Windows Vista.
- In conjunction with that Microsoft has ended all support for Windows 7 (United States time) Jan 14, 2020, we end support for PANATERM in Windows 7.

3. Set up

Installer construction

PANATERM installer includes the data below.

Item	Folder name after installation
PANATERM main body	PANATERM
Parameter file conversion software	ParameterConverter
Software for simulation	SimMotor
Disk driver for USB communication	USBDriver

<Notes>

Using PANATERM installer, please install it to the hard disk of the PC. It cannot be installed to the network drive. Even with copy or other measure, it cannot be installed/setup.

Way of installation

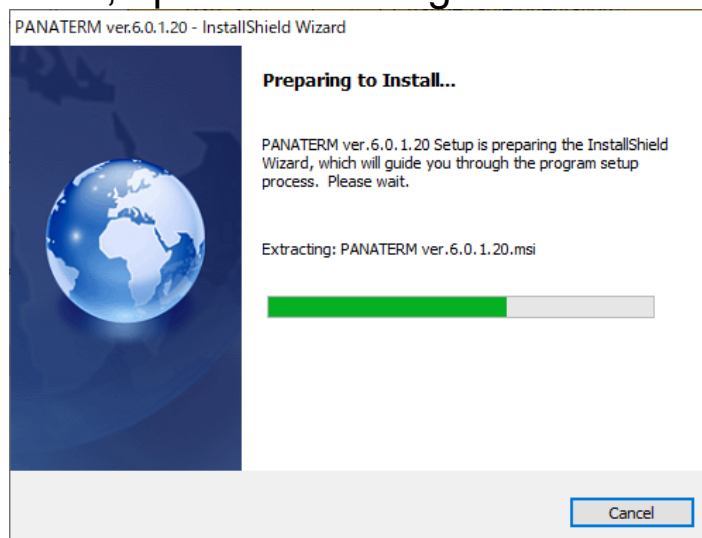

<Advance preparation>

- 1 Turn on the power supply of PC and start Windows.
(Close down other software running.)
- 2 Copy PANATERM installer (setup.exe) into an arbitrary folder.
- 3 Disconnect if the driver is connected to the PC with a USB cable.
- 4 Uninstall the PANATERM with the way below if PANATERM is already installed.

Select "PANATERM ver.6.0" with "Control panel" > "Programs and Features", and click "Uninstall".

<Start install>

- 1 Double - click “setup.exe”. Startup PANATERM Installer. Select the language (Japanese, English, Chinese (Simply) and Korean). And then, operate following the direction on the screen

- 2 After completing the install, the short cut icons below will be made on the desktop.

PANATERM ver.6.0

ParameterConverter

SimMotor

■Notes

- When an error occurs during setup, an error message will be displayed. Please refer to page 220 “Set up”, and remove the cause of the error.
- Please do not turn off the power supply of the PC or start up other software before completion of the install.
- PANATERM will be installed in C:\ProgramFiles\Panasonic Corporation\MINAS\PANATERM without special assignment. If windows for 64 bit version, it will be installed in C:\ProgramFiles(x86)\Panasonic Corporation\MINAS\PANATERM without special assignment. Please do not delete files under this folder (especially under \ini folder). When PANATERM should be deleted, please use “Deletion (Uninstall) way” described before.

- When Microsoft .NET Framework 3.5 SP1 is not installed, Installer of Microsoft .NET Framework 3.5 SP1 will start up when the installer start. Follow the instructions to continue the installation. Follow the instruction when you are asked to restart the computer after the installation.
- If Microsoft Visual C++ 2013 Redistributable(x86) is not installed, starting the installer activates the installer of Microsoft Visual C++ 2013 Redistributable(x86). Follow the instructions to continue the installation. Follow the instruction when you are asked to restart the computer after the installation. In addition, Microsoft Visual C++ 2013 Redistributable (x86) may not be installed under the following environments.
 - Only Microsoft Visual C++ 2013 Redistributable (x86) was uninstalled on the PC with Visual Studio 2013 installed.
 - Make sure you have Microsoft Visual C++ 2013 Redistributable (x86) installed.
- If Microsoft Office 2010 or later or Microsoft Access Database Engine is not installed, the Microsoft Access Database Engine 2010 installer will be installed when the installer is started. Follow the instructions to continue the installation. Follow the instruction when you are asked to restart the computer after the installation.
- Selection of language on setup is to select language of setup screen. The language selection of PANATERM can be changed with “File” > “Setting” > “Culture” on the menu bar on the condition that all function windows are closed down.

<Connection to driver (Device driver setting)>

- 1 When you connect using a USB cable, please refer to page 19 “Connection”, and connect the USB connector on the front of the driver and USB connector of the PC. When you connect using a RS232 cable, it is not necessary to carry out the following items.
- 2 When the driver’s power supply is turned on, pop-up appears on the task bar, and installing device driver automatically.
 - Notes 1) It is necessary to setup the device driver to each USB connector. Please setup device driver for each USB connector of using.

4. Basic Operation

Indication of keys

General Key indications which do not rely on the models of the keyboards are used in this manual, the indication may be different. Please read the indication based on the table below.

Indication	Context
[↑][←] [↓][→]	Up down and right and left are indicated. With these keys input, selected items are changed. Selected item is highlighted.
Number (0 - 9)	Number keys are indicated. Please input the objective number.
[ESC]	On keyboards, escape keys are indicated [Esc], [ESC]. They are used to turn inputted value back to the original one.
[ENTER]	Enter keys which is indicated [Enter], [ENTER], [RETURN] on keyboards are indicated. Input when each menus are selected and executed and at the end of input of values.

Section operation way of menu

Each item is executed by left - clicking the menu item or the operation button required to select.

Each items can be executed also by highlighting the menu required to select with [↑], [→], [↓], [←] keys, and pressing [ENTER] key.

Input of value

Please input them with number keys on the keyboard.

Value data of parameter changing and so on is indicated with decimal numbers. Please input them with decimal numbers. Binary numbers and hexadecimal numbers are not available.

Value input can be cancelled with [ESC] key.

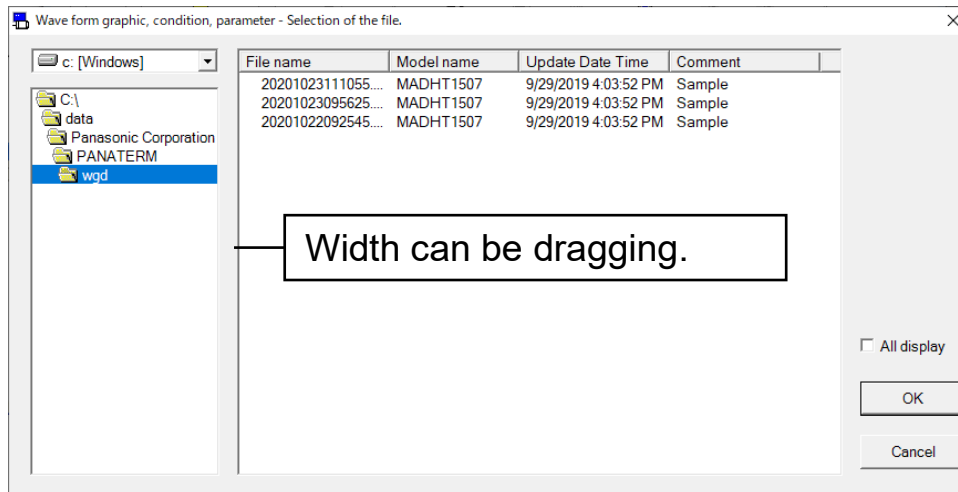

File operations

The following dialogue of file is displayed when files need to be appointing on “Read” or “Save” of parameters and so on.

<Read>

Use built-in dialogue box in PANATERM for read in parameter file, wave form graphic file or frequency character file.

This dialogue is only the objective file is displayed.

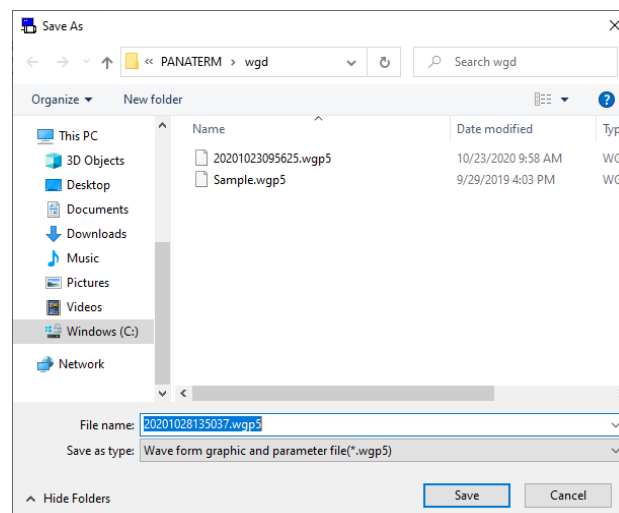

“All display” : If you checked this, files are displayed that you didn’t select series too.

Use dialogue box of Windows common dialogue box for read other file.

<Save>

Use dialogue box of Windows common dialogue box.

<Notes>

Extensions are added to files dealt with PANATERM to identify the types of each files. Please do not change the extensions. PANATERM cannot read files if their extensions are changed.

Parameter file	filename.prm5
Parameter comparison file Object comparison file	filename.csv
Wave form graphic measure condition file	filename.wgc5 filename.wgc6
Wave form graphic measure result file	filename.wgd5 filename.wgd6
Wave form graphic parameter and measure result file	filename.wgp5 filename.wgp6
Frequency character measure condition file	filename.fcc5
Frequency character measure result file	filename.fcd5
Frequency character parameter and measure result file	filename.fcp5
Monitor screen log file	filename.mon5
Fit gain measure result file	filename.fit5
Object data file	filename.obj5
Block parameter file	filename.obj5
Wireless setting parameter file	filename.prw5

Closing down way of each screen

Each screen are closed down clicking “Exit” with left button of the mouse when there is “Exit” button on the tool bar of the each screen. Also they can be closed down clicking  right above of the screen.

Tool chip text

The explanations of the objective items are displayed if the mouse button is put on the displayed items.

5. Start up and Close down

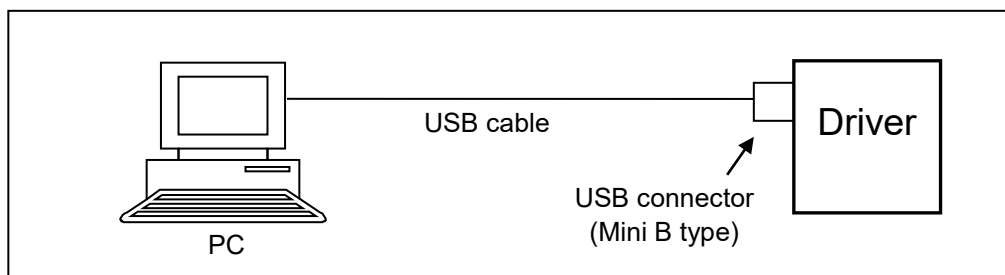

Connection

Connection of USB cable (Commercialized product)

Please confirm that all power supplies of the driver and PC are turned off. Please be sure to insert USB cable.

Please refer to the driver's manual or technical reference regarding connection and setting measure with the front panel.

<In case 1 driver is connected>

Notes 1) Regarding communication speed, it is applicable to full speed of 12 Mbps only. Actual communication speed may change largely by many causes, connection to USB equipment other than drivers, operation load condition of PC side OS, communication error caused by communication error by noise or something, driver's response speed, and so on.

Notes 2) USB cables are not prepared by our company. Please use commercialized USB cables applied to USB2.0 with shield and ferrite core for anti - noise.

Notes 3) When two or more systems are connected simultaneously in parallel the operation of PANATERM cannot be guaranteed.

Connection of wireless LAN

Confirm that the power of the driver is completely turned off. Then firmly insert the Panasonic optional device: wireless LAN dongle (DV0PM20105).

If you connect multiple drivers, firmly insert the Panasonic optional device, wireless LAN dongle (DV0PM20105), to each driver.

You must initialize the device before establishing a connection.

For the setting, see the chapter of the page 42 “Wireless LAN/Driver information set-up” screen.

Notes 1) The wireless LAN dongle can only be used in Japan, China, United States, Korea and Taiwan. Care must be taken when using it in region other than those that allows the use of the device, because it may be a violation of the law.

Notes 2) A longer wireless communication distance may cause communication instability such as communication disconnections, slow communication speeds, and driver response delays.

Notes 3) A third party may enter the network to adversely affect the communication. In such a case, disconnect the device from the network.

* How to disconnect devices

PC : Disable the network connection

Driver : Pull out the wireless LAN dongle from the driver and turn off the power.

Wireless router : Pull out the adapter from the wall outlet to turn off the power.

Notes 4) Make the setting to encrypt (WPA/WPA2) the communication on the network to prevent third party intrusion.

* When using WPA, update the key in about 2 minutes to ensure security.

Connection of RS232 cable

Please confirm that all power supplies of the driver and PC are turned off. Please be sure to insert RS232 cable.

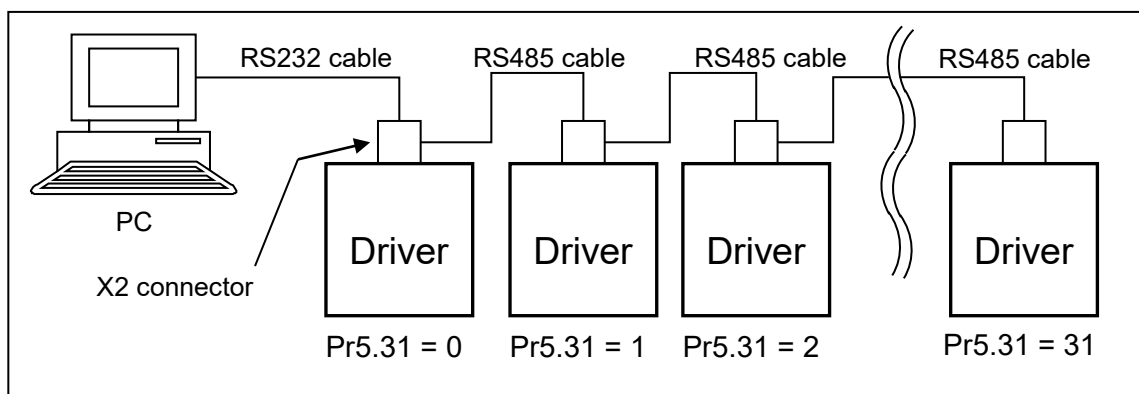

In connecting two or more drivers, it connects driver with a PC by RS232 communication. It connects by RS485 communication between each driver.

Please refer to the driver's manual or technical reference regarding connection and setting measure with the front panel.

<In case 1 driver is connected>

<In case 2 or more drivers are connected>

Notes 1) About RS232 cable and RS485 cable, it is not preparing at our company. Please prepare the cable.

Notes 2) Pr5.31 is set as the axis address (ID). Please set the axis address (ID) of the driver linked to a PC as 0. The other drivers set the axis address (ID) from 1 to 31. Please do not overlap the axis address (ID).

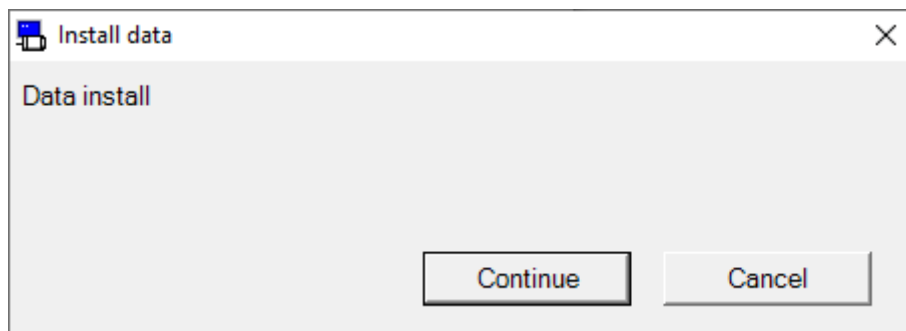

Notes 3) When you connect two or more drivers, please set up so that the communicate speed of each driver becomes the same.

Notes 4) Driver is not connectable with PC by RS485 communication.

Start up of PANATERM

- 1 Turn on the PC, and start up Windows.
- 2 Turn on the driver.
- 3 Click the shortcut of “PANATERM ver.6.0” made on the desktop on the installation.
In case of no shortcut on the desktop, select the group of “start” > “Panasonic Corporation” of Windows, and click “PANATERM ver.6.0” among them.
- 4 PANATERM main screen is displayed.

Note) When PANATERM starts up for the first time, the indication below is displayed to copy sample data of wave form graphic or something saved in PANATERM into “My document”. Choose “Continue”.

Close down of PANATERM

- 1 To close down PANATERM, click “File” > “Exit of PANATERM” on the menu of PANATERM screen.
(Clicking  right end of the title bar on PANATERM screen is also same operation as “Exit of PANATERM”)
- 2 A message to confirm closing down PANATERM is displayed.
To close down, click “Yes”, to continue PANATERM operation, click “No”.

Note) Please note that if programs are closed down without saving information set or data obtained, all information would be lost.

6. Screen Operation

Select connection with drivers

Starting PANATERM displays a dialog box asking if you want to start communication with a driver. Different screens are displayed depending on whether the communication method used is USB, wireless, or RS232. The dialog box also appears when you click “Connect” from the tool bar of the main screen or when you select “File” > “Setting” > “Communication with the driver” from the menu bar of the main screen.

<When USB communication is used>

Selection of the communication with the driver

Selection of the communication with the driver

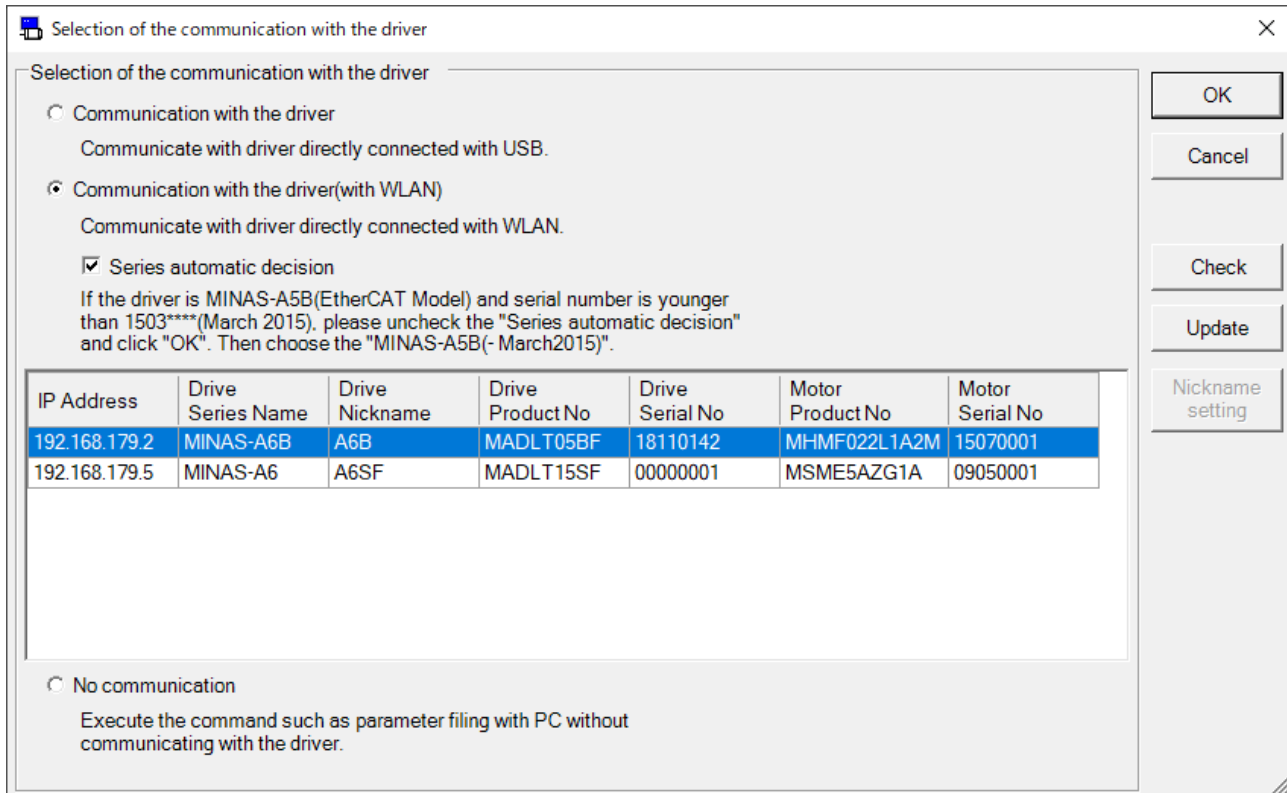

- Communication with the driver
Communicate with driver directly connected with USB.
- Communication with the driver(with WLAN)
Communicate with driver directly connected with WLAN.
- Series automatic decision
If the driver is MINAS-A5B(EtherCAT Model) and serial number is younger than 1503****(March 2015), please uncheck the "Series automatic decision" and click "OK". Then choose the "MINAS-A5B(- March2015)".

Drive Series Name	Drive Nickname	Drive Product No	Drive Serial No	Motor Product No	Motor Serial No
MINAS-A6B	A6B	MADLT05BF	18110142	MHMF022L1A2M	15070001
MINAS-A6	A6SF	MADLT15SF	00000001	MSME5AZG1A	09050001

No communication
Execute the command such as parameter filing with PC without communicating with the driver.

Buttons: OK, Cancel, Check, Update, Nickname setting

<When wireless communication is used>

Selection of the communication with the driver

Selection of the communication with the driver

Communication with the driver
Communicate with driver directly connected with USB.

Communication with the driver(with WLAN)
Communicate with driver directly connected with WLAN.

Series automatic decision
If the driver is MINAS-A5B(EtherCAT Model) and serial number is younger than 1503****(March 2015), please uncheck the "Series automatic decision" and click "OK". Then choose the "MINAS-A5B(- March2015)".

IP Address	Drive Series Name	Drive Nickname	Drive Product No	Drive Serial No	Motor Product No	Motor Serial No
192.168.179.2	MINAS-A6B	A6B	MADLT05BF	18110142	MHMF022L1A2M	15070001
192.168.179.5	MINAS-A6	A6SF	MADLT15SF	00000001	MSME5AZG1A	09050001

No communication
Execute the command such as parameter filing with PC without communicating with the driver.

Buttons: OK, Cancel, Check, Update, Nickname setting

Selection of the communication with the driver

“Communication with the driver”

Communication with the driver connected by USB is done. The list of the drivers and motors model names and serial numbers are displayed. Please select the driver connected, among them.

“Communication with the driver (with WLAN)”

Selecting this checkbox and then clicking the “Update” button displays the drivers that support wireless connection.

Nicknames of connectable drivers as well as product numbers and serial numbers of drivers and motors are listed. Select a desired driver from the list.

“Series automatic decision”

The series automatic decision function of driver is set up. Usually, please put in a check and validate it.

□ “No communication”

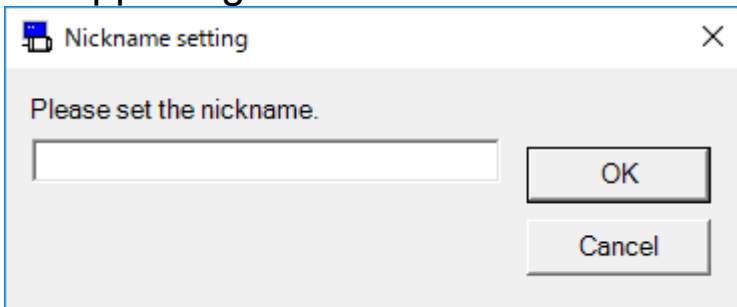

Without communication with drivers, edition of parameter etc. saved in files can be available freely.

- “OK” : Determine the context selected.
- “Cancel” : Make the selected context invalid.
- “Check” : Selected driver’s front panel LED blinks. (Only “Communication with the driver” is selected.)
- “Update” : A list of the driver connected is updated.
- “Nickname setting” : Selected driver’s nickname setting is changed. (Only “Communication with the driver” is selected.)

Nickname setting

When “Nickname setting” is clicked on the Communication with the driver screen, Nickname setting screen will be displayed for models which support nicknames. An error dialog will be displayed for models which do not support nicknames

< Supporting models >

< Non-supporting models >

Note) Initial indication of Nickname setting screen shows blank if no nickname is set up, and the set nickname if a nickname has already been set.

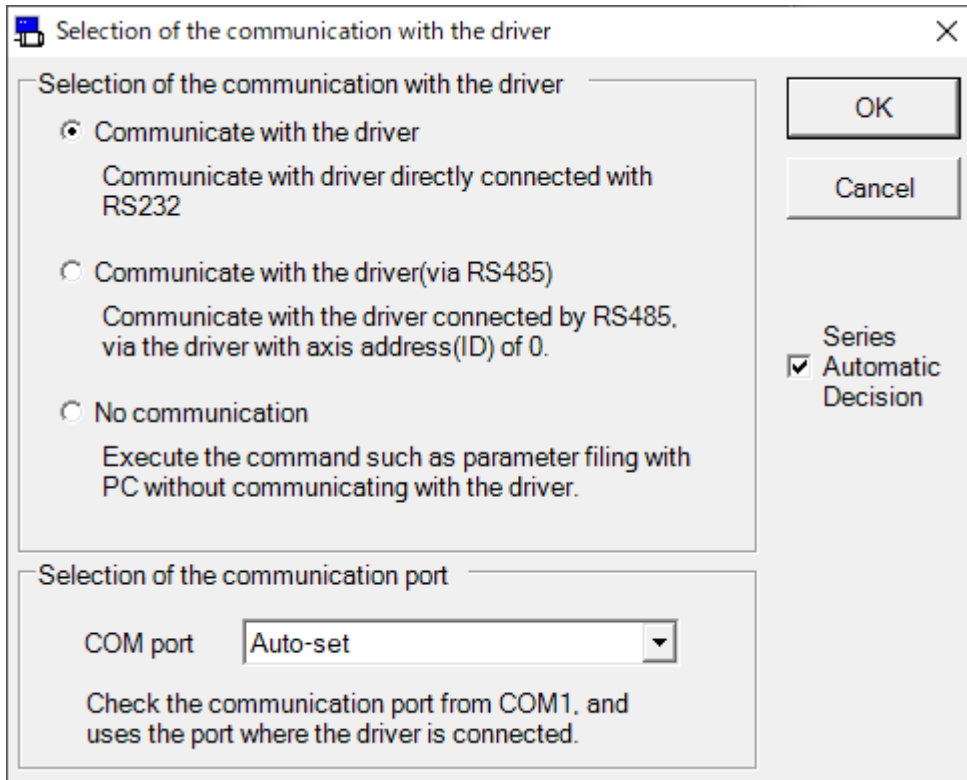

Set up the nickname on Nickname setting screen and click “OK” to reflect the change in nickname, then terminate the Nickname setting screen.

Click “Cancel” to terminate Nickname setting screen without reflecting the nickname change.

Notes 1) When there are drivers communicating, the drivers are displayed "Now Connect". To continue the communication with the drivers communicating, please click "Cancel".

Notes 2) The driver displayed as "Already Used" cannot be selected. The driver may be communicating with other applications, or it may be operating the front panel.

<When RS232 communication is used>

Selection of the communication with the driver

"Communicate with the driver"

Communication with the driver connected by RS232 is done.

"Communicate with the driver (via RS485)"

It communicates with the driver connected by RS485 cable via the driver of the axial address 0.

"No communication"

Without communication with drivers, edition of parameter etc. saved in files can be available freely.

"OK" : Determine the context selected.

"Cancel" : Exits the screen without reflecting the selected contents.

"Series automatic decision"

The series automatic decision function of driver is set up. Usually, please put in a check and validate it.

Selection of the communication port

Select the communication port.

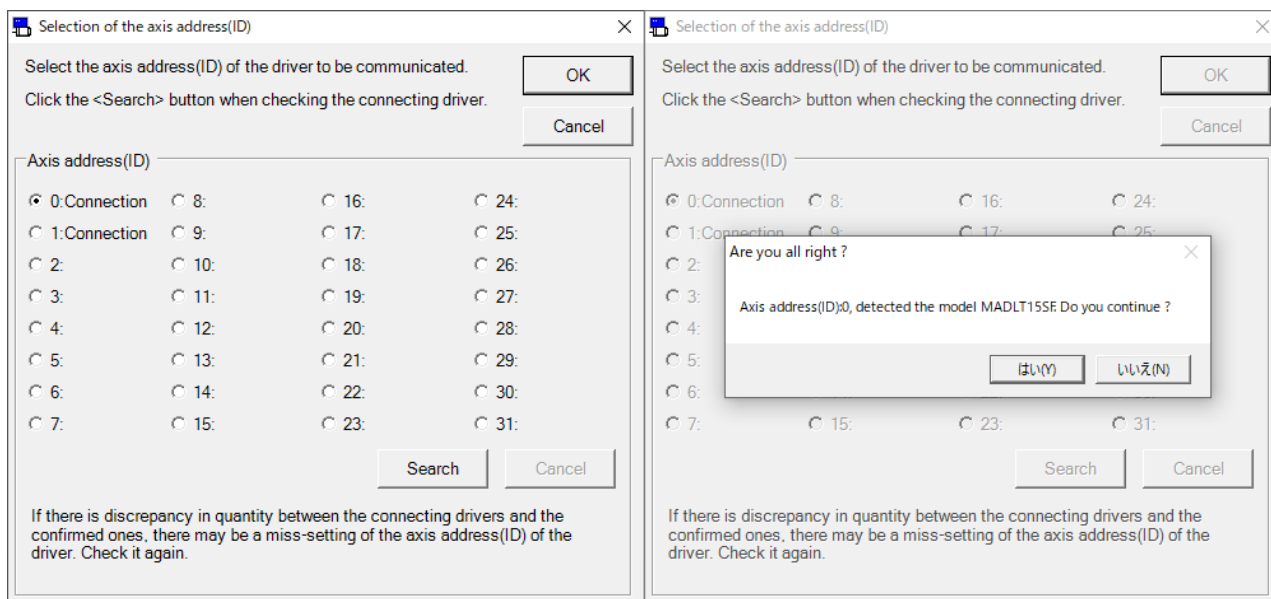

COM 1 – 16 : The specified port is used.

Auto-set : Connected port is automatically identified.

Selection of the axis address (ID)

When connecting to a driver (via RS485) is selected, select the axis address (ID) of the driver from a list.

PANATERM performs a parameter setting and the surveillance of a state to the driver of the specified axis address in this.

“OK” : Determine the context selected.

“Cancel” : Exits the screen without reflecting the selected contents.

Axis address (ID)

“Search” : The state of the connected driver is searched.

“Cancel” : Search of driver is stopped.

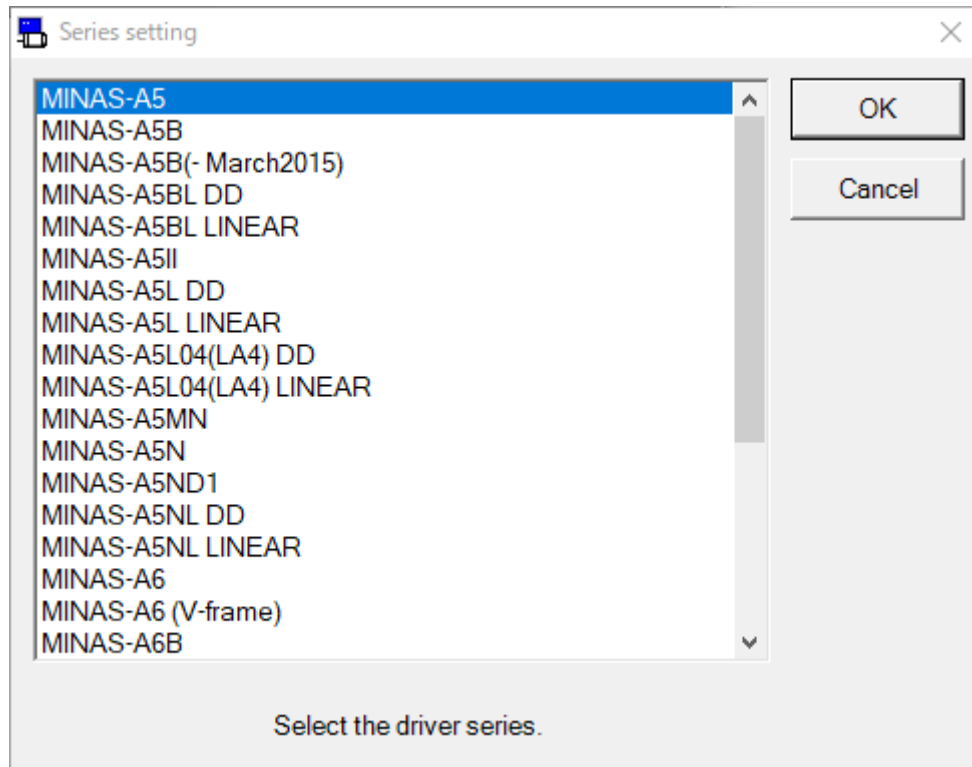

Notes 1) When the actually connected number of driver differs from the number of the driver whose check of connection was completed by search, there is a possibility that a setup of the axis address (ID) is wrong. Please check that the axis address (ID) of the driver linked to a PC is 0. Moreover, please check whether the axis address (ID) of other driver overlaps in 1 to 31.

Notes 2) Search of driver requires the time for about 1 minute.

Series setting

When select the “No communication” or “Series automatic decision” invalidity, series setting screen is displayed. Select the series name of the driver from the list.

- 1 Regarding the combination between the driver’s model and the series, please refer to page 8 “Confirming applicable drivers”.

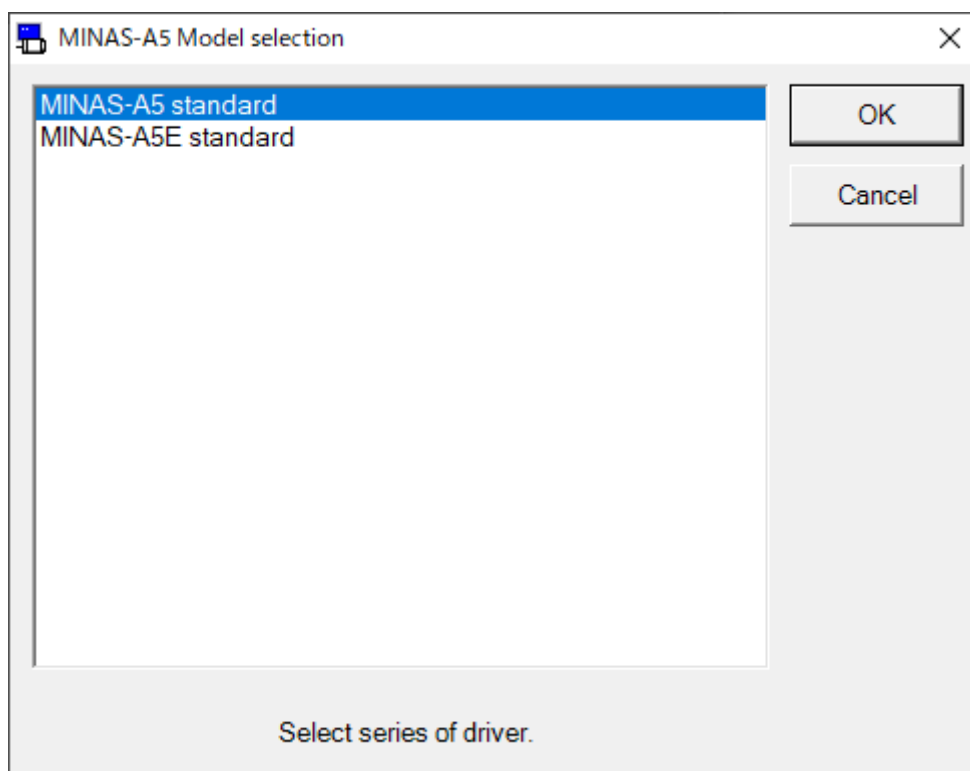

“OK” : Determine the context selected.

“Cancel” : Exits the screen without reflecting the selected contents.

Note) Even “Communication with the driver” selected, if drivers model cannot be identified automatically, series selection is executed in case of derivational model, specified model.

Note) For wireless connection, the displayed list only includes series that support wireless connection.

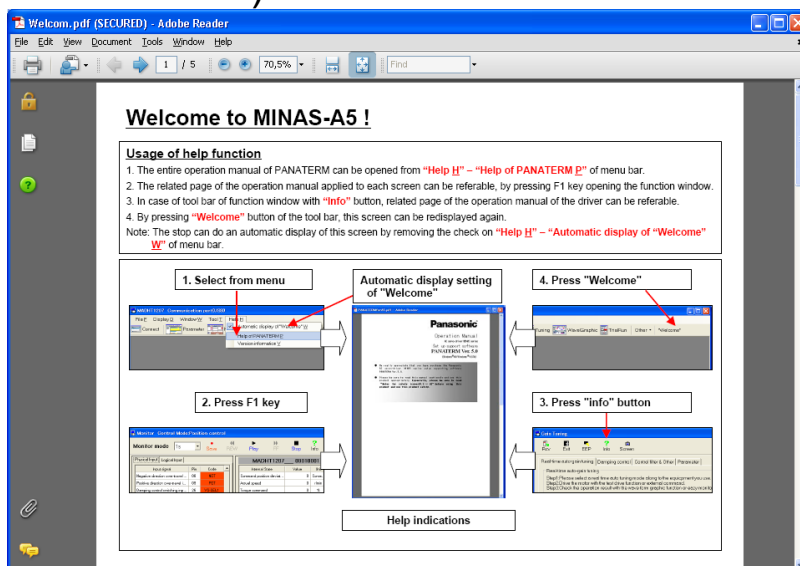

2 Select the driver's model from the list.

“OK” : Selected items are determined.

“Cancel” : Exits the screen without reflecting the selected contents.

3 The main screen is displayed, and you can use all kind of function. Select the series corresponding to "Welcome" and "Welcome" screen is displayed when automatic display setting of "Welcome" is enabled. (This screen is not displayed when using RS232 communication.)

Main screen

Once PANATERM start up, the main screen is displayed. Many PANATERM functions are used opening each function windows in this main screen. Some function windows cannot use being opened together.

You can display only valid function window.

Welcome								

Some functions are restricted depending on software version of driver.
For details, refer to technical specification of driver.

*1 Analysis after frequency characteristic measurement cannot be used.

*2 Only linear type (LINEAR) is supported. Rotary type (DD) is not supported.

<When USB communication is used>

Note) Pin assign setting screen, setup wizard, and RTEK setup screen can be operated when all other windows are closed. Even outside the above function windows, combinations in the following is cannot use.
(See the next page's table.)

	Functions that cannot be opened simultaneously
Parameter	Gain tuning, Fit gain (Standard), Fit gain (2 degrees of freedom control), Object Editor, Block operation Editor, Deterioration diagnosis, Magnetic pole position estimation results copying
Gain tuning	Parameter, Fit gain (Standard), Fit gain (2 degrees of freedom control), Object Editor, Block operation Editor, Deterioration diagnosis, Magnetic pole position estimation results copying
Trial run	Fit gain (2 degrees of freedom control), Z phase search, Magnetic pole position estimation results copying
Frequency characteristics	Fit gain (Standard), Fit gain (2 degrees of freedom control)
Analogue input adjustment	Magnetic pole position estimation results copying
Z phase search	Fit gain (2 degrees of freedom control), Trial run, Magnetic pole position estimation results copying
Fit gain (Standard)	Parameter, Gain tuning, Frequency characteristics, Object Editor, Block operation Editor, Deterioration diagnosis, Magnetic pole position estimation results copying
Fit gain (2 degrees of freedom control)	Parameter, Gain tuning, Trial run, Frequency characteristics, Z phase search, Object Editor, Block operation Editor, Deterioration diagnosis, Magnetic pole position estimation results copying
Object Editor	Parameter, Gain tuning, Fit gain (Standard), Fit gain (2 degrees of freedom control) , Block operation Editor, Block operation Monitor, Deterioration diagnosis, Magnetic pole position estimation results copying
Block operation Editor	Parameter, Gain tuning, Fit gain (Standard), Fit gain (2 degrees of freedom control), Object Editor, Deterioration diagnosis, Magnetic pole position estimation results copying

	Functions that cannot be opened simultaneously
Block operation Monitor	Object Editor
Deterioration diagnosis	Parameter, Gain tuning, Fit gain (Standard), Fit gain (2 degrees of freedom control), Object Editor, Block operation Editor, Magnetic pole position estimation results copying
Magnetic pole position estimation results copying	Parameter, Gain tuning, Trial run, Fit gain (Standard), Fit gain (2 degrees of freedom control), Analogue input adjustment, Z phase search, Object Editor, Block operation Editor, Deterioration diagnosis

<When wireless communication is used>

Note) Trial run, frequency characteristics, Z phase search, and fit gain cannot be used.

Pin assign setting, setup wizard, and RTEX setup can be operated when all other windows are closed.

Even outside the above function window, combinations in the following cannot be used.

(See the next page's table.)

	Functions that cannot be opened simultaneously
Parameters	Gain adjustment, Object Editor, Block operation Editor, Deterioration diagnosis, Magnetic pole position estimation results copying
Gain adjustment	Parameters, Object Editor, Block operation Editor, Deterioration diagnosis, Magnetic pole position estimation results copying
Analogue input adjustment	Magnetic pole position estimation results copying
Object Editor	Parameters, Gain adjustment, Block operation Editor, Block operation Monitor, Deterioration diagnosis, Magnetic pole position estimation results copying
Block operation Editor	Parameters, Gain adjustment, Object Editor, Deterioration diagnosis, Magnetic pole position estimation results copying
Block operation Monitor	Object Editor
Deterioration diagnosis	Parameters, Gain adjustment, Object Editor, Block operation Editor, Magnetic pole position estimation results copying
Magnetic pole position estimation results copying	Parameter, Gain tuning, Fit gain (Standard), Fit gain (2 degrees of freedom control), Analogue input adjustment, Object Editor, Block operation Editor, Deterioration diagnosis

<When RS232 communication is used>

Note) Gain tuning, trial run, trouble shooting, analogue input adjustment, Z phase search, setup wizard, fit gain, object editor, battery refresh, block operation editor, block operation monitor, deterioration diagnosis, RTEX setup, and Magnetic pole position estimation results copying cannot be used. Frequency characteristics screen and pin assign setting screen can be operated when all other windows are closed. Since detection of guide wire malfunction is not performed during operation, please do not cut a communication cable or do not turn off the power supply of driver.

When connecting each driver with RS485 cable, it is possible to change connection driver from "Axis (ID)" of a tool bar.

Structure of main screen

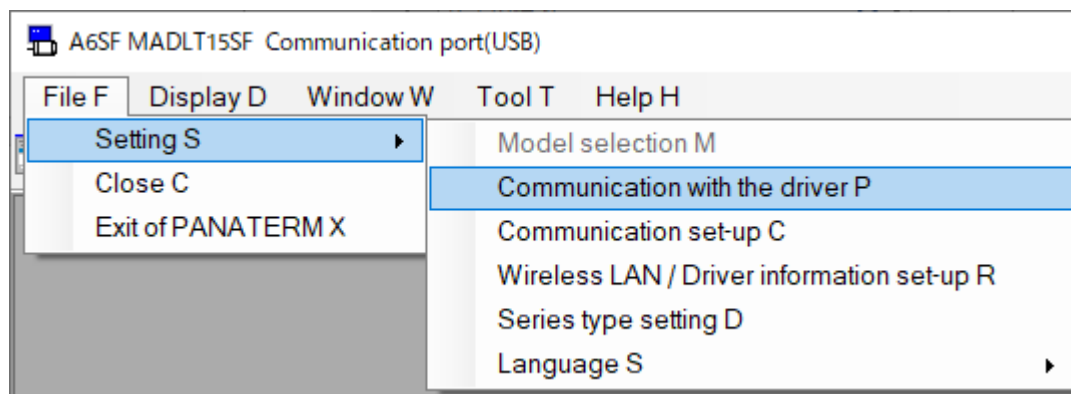

(1) Title bar

Model code and setting condition of communication port are displayed.

Driver nicknames are also displayed for wireless connection.

(2) Menu bar

The menu of “File”, “Display”, “Window”, “Tool” and “Help” are displayed. Click a command name to use a command. Some commands are divided by functions. And they changes by opening each function’s.

(3) Tool bar

Each function windows are called. Function windows can be called also out of the menu bar of the main screen.

Without communication with drivers, valid functions are limited.

In subsequent explanation, the functions that can call a function window with a tool bar are explained with the case using a tool bar for an example.

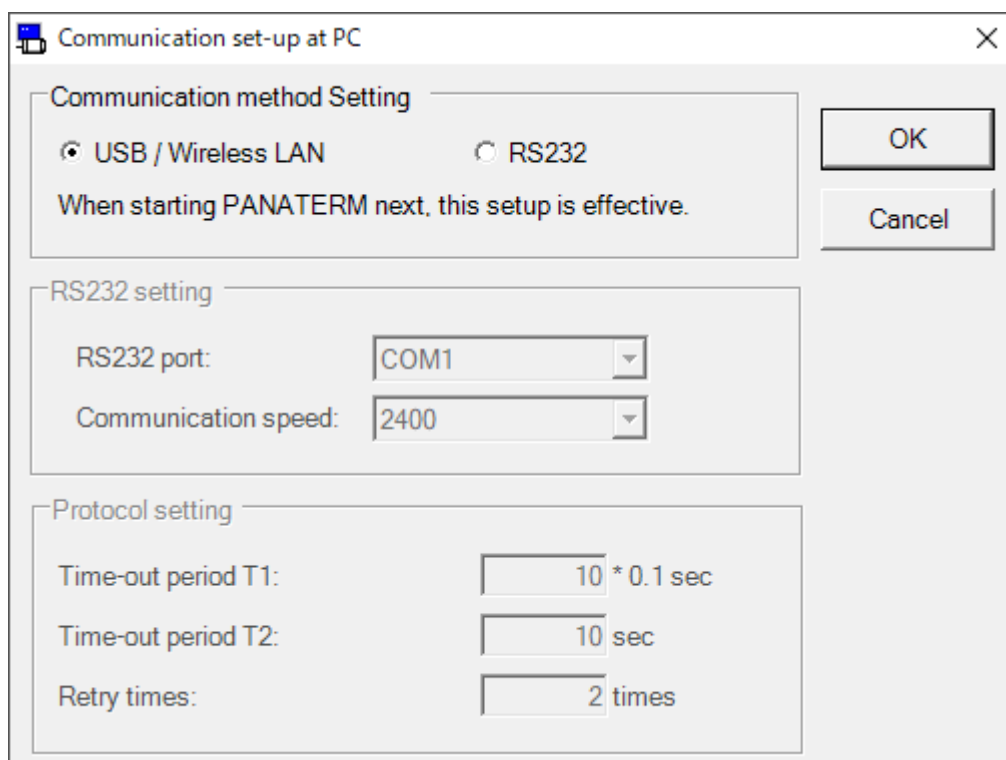

Communication set-up at PC screen

In a communication setup at PC screen, communication between driver and PANATERM is set up.

Note) Usually, please use initial setting. This setup becomes only the PC side and is not reflected in the driver side. Please be careful.

Open the Communication setup at PC window

- 1 Start "PANATERM".
(Please refer to Article 5. Start up and Close down in details)
- 2 Click "File" > "Setting" > "Communication with the driver" is selected on the menu bar on the main screen.
- 3 The Communication setup at PC window is opened.

"OK" : Selected items are determined.

"Cancel" : Exits the screen without reflecting the selected contents.

Communication method setting

Connection with driver select from “USB / Wireless LAN” communication or “RS232” communication.

When starting PANATERM next this setup is effective.

RS232 setting (When “RS232” is selected)

“RS232 port” : Initial value of the communication port at the time of automatic search is selected.

“Communication speed” : Initial value of the communication speed at the time of automatic search is selected.

Notes 1) Since the connection setup newest by this setup is memorized when it is under connection by RS232 communication, it cannot select except a setup in use now.

Protocol setting (When “RS232” is selected)

“Time-out period T1” : Specify timeout T1 between characters in 0.1 seconds.

“Time-out period T2” : Specify timeout T1 between protocols in seconds.

“Retry times” : Specify the number of communication retrials.
Setting range is from 1 to 8 times.

Wireless LAN / Driver information set-up screen

In the Wireless LAN / Driver information set-up screen, you make the setting of the wireless communication between PANATERM and the driver.

Note) To establish wireless communication, you must make wired connection to the driver and make wireless settings such as the IP address and PIN code on this functional screen beforehand.
Note that different drivers require different settings.

Open the Wireless LAN / Driver information set-up window

- 1 Start "PANATERM".
(Please refer to Article 5. Start up and Close down in details)
- 2 Click "File" > "Setting" > "Wireless LAN / Driver information set-up" is selected on the menu bar on the main screen.
- 3 The Wireless LAN / Driver information set-up window is opened.

Wireless LAN / Driver information set-up

Protocol Setting (WLAN)

Connect Mode : STA

Security : WPA

Region code : JP

DHCP : Enable

Maker use : Enable

SSID : PanasonicServo000

Password : *****

IP Address :

Sub-net mask :

Gateway :

Driver information set-up

PIN Code :

Nickname : NoName

PIN Code Initialization

PIN Code Setting

OK

Cancel

File Read

File Save

*The above settings are changed after power supply reset.
If you set, and writes only the parameters of the wireless LAN settings that are displayed in this screen directly to the EEPROM.

Protocol Setting (WLAN)

Make the setting of the wireless connection.

- “Connect Mode” Set the connection method for the wireless communication.
Select “STA” when you use wireless communication.
- “Security” Set the encryption method.
Select “WPA” or “WPA2” depending on the setting of the computer and the access point.
Note) When using WPA, update the key in about 2 minutes to ensure security.
- “Region code” Select the region in which this device is used.
JP : JAPAN CN : CHINA US : U.S.A.
TW : TAIWAN KR : KOREA
 Note that setting a wrong region code is against the law.
- “DHCP” Specify whether the DHCP protocol is used or not.
When DHCP is enabled, the setting of the IP address and other parameters are automatically allocated from the access point to connect to.
When DHCP is disabled, you must make the setting of the IP address and other parameters manually.
- “Maker use” Do not change this setting.
- “SSID” Set the SSID of the wireless connection access point. The configured SSID must coincide with that of the access point to connect to.
Use only single-byte characters.
Valid number of characters : 8 to 32
Valid characters : 0–9, a–z, A–Z, -, _
- “PWD” Set the password of the access point to connect to.
The configured password must coincide with that of the access point to connect to. Use only single-byte characters.
Valid number of characters : 8 to 32
Valid characters : 0–9, a–z, A–Z, -, _, !, @, #, \$, %, ^, *, ,, ., /
- “IP Address” Set the IP address used for the wireless connection.
This parameter can be set when DHCP is disabled.
- “Sub-net mask” Set the subnet mask used for the wireless connection.
This parameter can be set when DHCP is disabled.
- “Gateway” Set the default gateway used for the wireless connection.
This parameter can be set when DHCP is disabled.

Driver information set-up

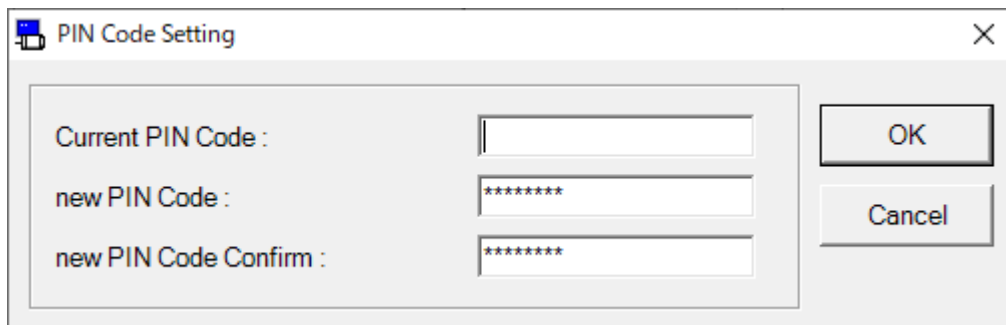

Set the driver information for wireless communication.

- “PIN Code” This field displays the PIN code that is required for wireless connection.
This field is empty if a PIN code is not set, or displays “*****” if a PIN code is set.
To set a PIN code, click “PIN Code Setting”.
- “Nickname” You can set any driver nickname, which appears on PANATERM. The nickname displays “NoName” if it is not set.
Valid number of characters : 1 to 8
Valid characters : 0–9, a–z, A–Z, -, _
- “PIN Code Initialization” This action initializes the current PIN code.
You can initialize the PIN code only through wired connection.
- “PIN Code Setting” This item displays the “PIN Code Setting” screen for PIN code setting.
The PIN code must be a single-byte 8-character string.
The PIN code must include at least one single-byte uppercase letter, one single-byte lowercase letter, and one single-byte numeric.
Wireless communication does not start if an invalid PIN code or no PIN code is set.
- “OK” : The setting is enabled and written into EEPROM.
- “Cancel” : The setting is not enabled and the screen is closed.
- “File Read” : Wireless settings are loaded from a file (.prw5). However, no PIN code is loaded.
- “File Save” : The current wireless settings are saved in a file. Note that this command saves the data entered on the screen, not the data configured in the driver.

Procedure of wireless setting

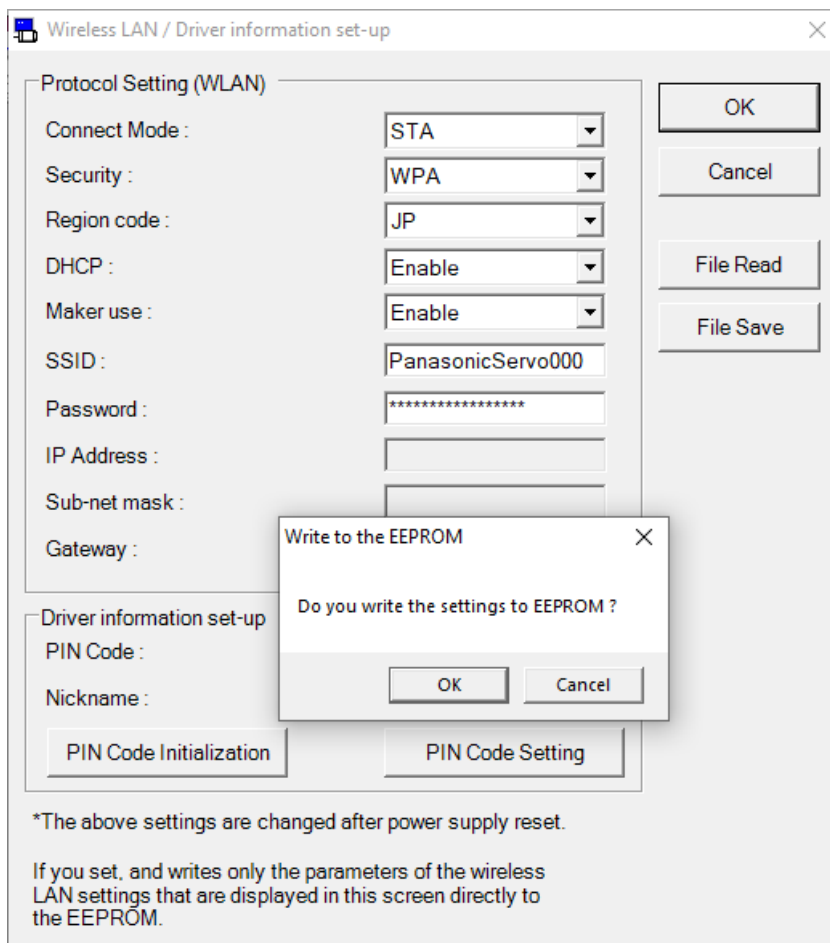

- 1 In “Protocol Setting (WLAN)” of the Wireless LAN / Driver information set-up screen, make wireless settings of “Connect Mode”, “Security”, “Region code”, “DHCP”, “SSID”, and “PWD” in accordance with the setting of the access point.
Set any values for “Driver information set-up” and “Nickname”
- 2 Click “PIN Code Setting” to display the PIN Code Setting screen.

- 3 Make the PIN code setting in the PIN Code Setting screen and click “OK”. The setting is enabled and the PIN code setting screen closes.

* An error message is displayed if you set an invalid PIN code.

- 4 Click “OK” in the Wireless LAN / Driver information set-up screen after the PIN Code Setting screen closes. The following confirmation dialog box is displayed.

- 5 Click “OK” in the confirmation dialog box to write the setting into EEPROM and close the Wireless LAN / Driver information set-up screen.
- 6 Close PANATERM and power off the driver.
The wireless connection setting of the driver is completed.

- Notes 1) Wireless communication does not start if an invalid PIN code or no PIN code is set.
If you forget the PIN code, initialize the PIN code through a wired connection and set it again.
- Notes 2) The Wireless LAN / Driver information set-up screen is not displayed for a RS232 connection. To make wireless settings, switch the communication method by selecting “USB / Wireless LAN” in the Communication set-up at PC screen of the computer.
- Notes 3) The Wireless LAN / Driver information set-up screen is not displayed for a driver that does not support wireless LAN. For wireless setting, select a driver series that supports wireless connections.
- Notes 4) Do not power off the driver or computer while data is written into EEPROM. The validity of the written data is not guaranteed if the power is turned off during data writing.
- Notes 5) The new wireless settings are not enabled until they are written into EEPROM and the power is reset.
- Notes 6) If you change the wireless settings during an active wireless connection, automatic connection establishment may fail next time you turn on the power. In such a case, select a connected-to driver again in the screen for selecting a driver to be connected.
- Notes 7) Be careful not to be seen when you enter a PIN.
- Notes 8) Encrypt the communication on the network to prevent third party intrusion. Disconnect the device from the network when the device is compromised.

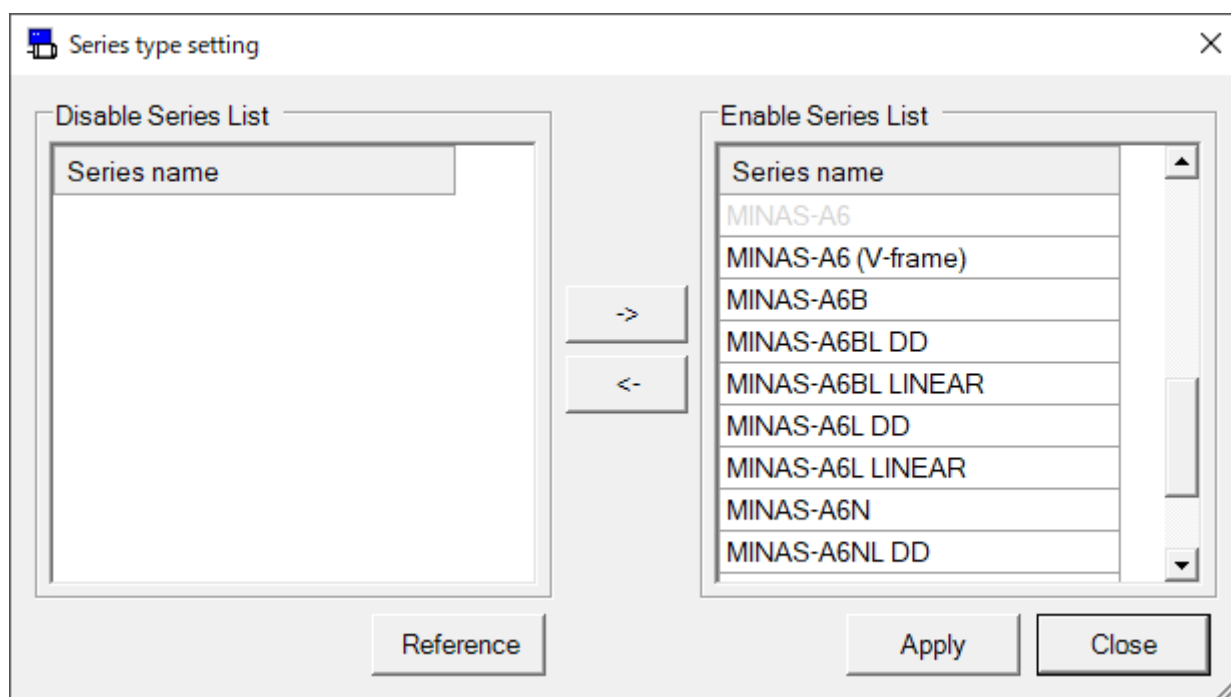

Series type setting screen

In a series type setting screen, you can use the driver of other series by adding a series definition to PANATERM.

Note) Please use the default setting normally.
For more information, please contact a distributor.

Open the Series type setting window

- 1 Start “PANATERM”.
(Please refer to Article 5. Start up and Close down in details)
- 2 Click “File” > “Setting” > “Series type setting” of the menu bar on the main screen.
- 3 The Series type setting window is opened.

- “->” : Move selected series in “Disable Series List” to “Enable Series List”.
- “<-” : Move selected series in “Enable Series List” to “Disable Series List”.
- “Reference” : You can add a new series to “Enable Series List” by referring to series definition file on the PC.
- “Apply” : Apply the changes of the series definition setting.
- “Close” : Close the series type setting window.

Enable Series List

The available series are displayed.

If you double click a series in this list or select series and click “<-” you can move it to “Disabled Series List”.

Disable Series List

The unavailable series are displayed.

If you double click a series in this list or select series and click “->” you can move it to “Enabled Series List”.

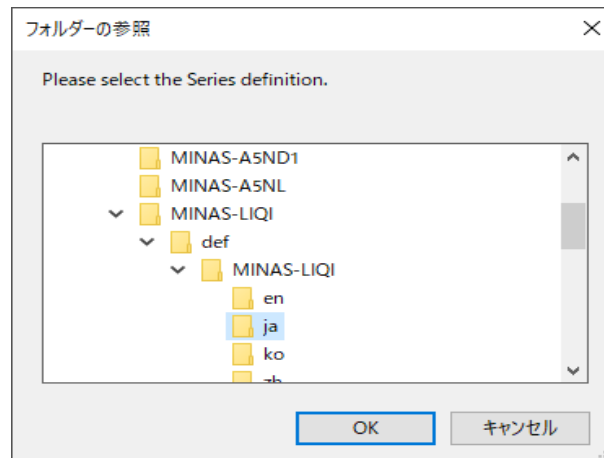

Close the Series type setting window

Click “Close” button or  button at top right of the screen.

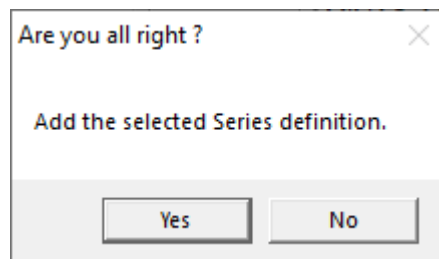

If you do not run "Apply" after changing the series definition, the exit confirmation dialog is displayed.

Adding and updating of the series definition by reference

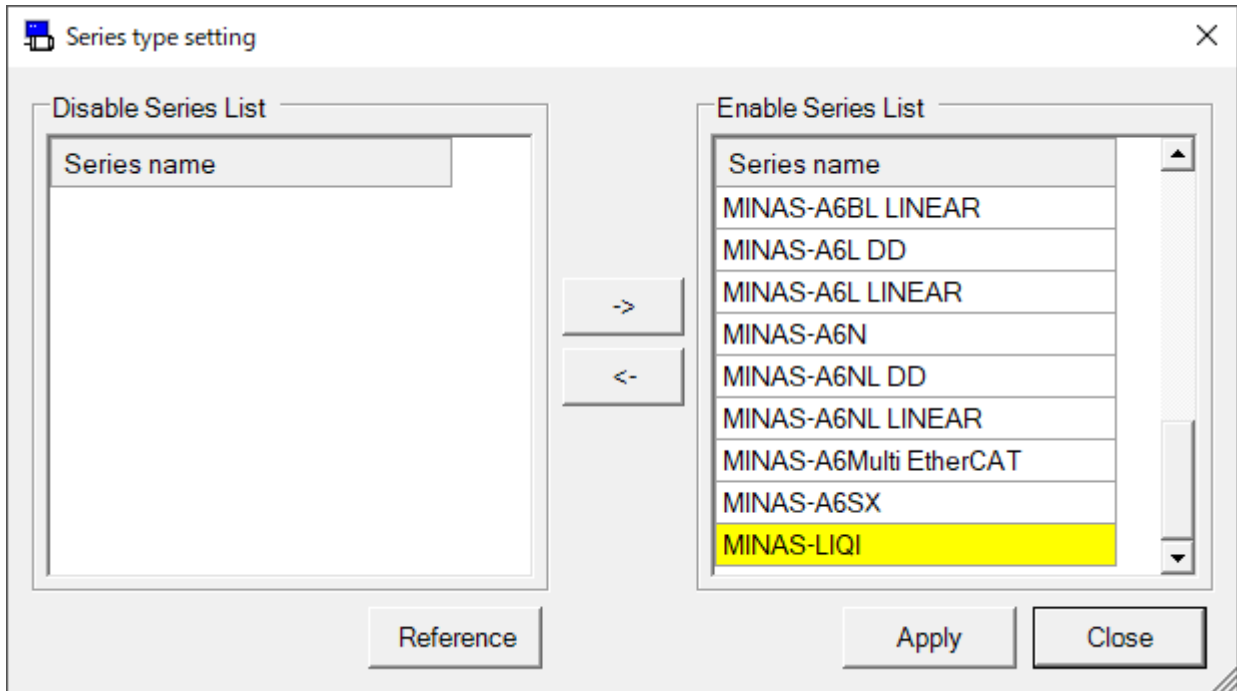

1. If you click "Reference", the Browse For Folder dialog box is displayed, and you can select folder.

2. Click "OK" after selecting the folder.
If selected folder has a series definition file then a confirmation dialog is displayed.
Click "Yes" then the series definition file is added.

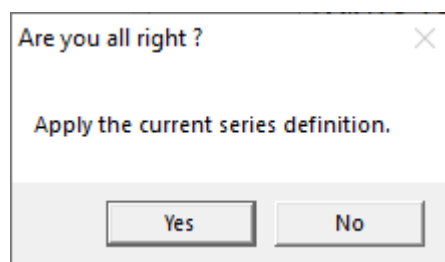

3. If adding a series definition is success, “Enable Series List” will be updated.

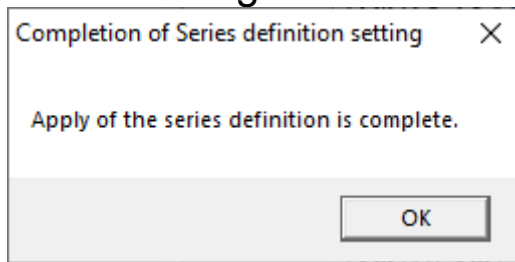

- * The background color of the series definition that you added or updated will change.

4. Click “Apply”, in order to enable changes of the series definition. If you change the series definition, the confirmation dialog will be displayed. Click “Yes” then apply changes of the series definition.

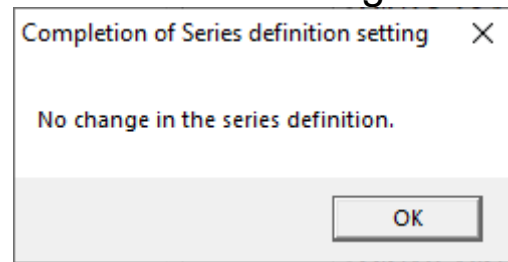

5. Completion of Series definition setting dialog will be displayed.

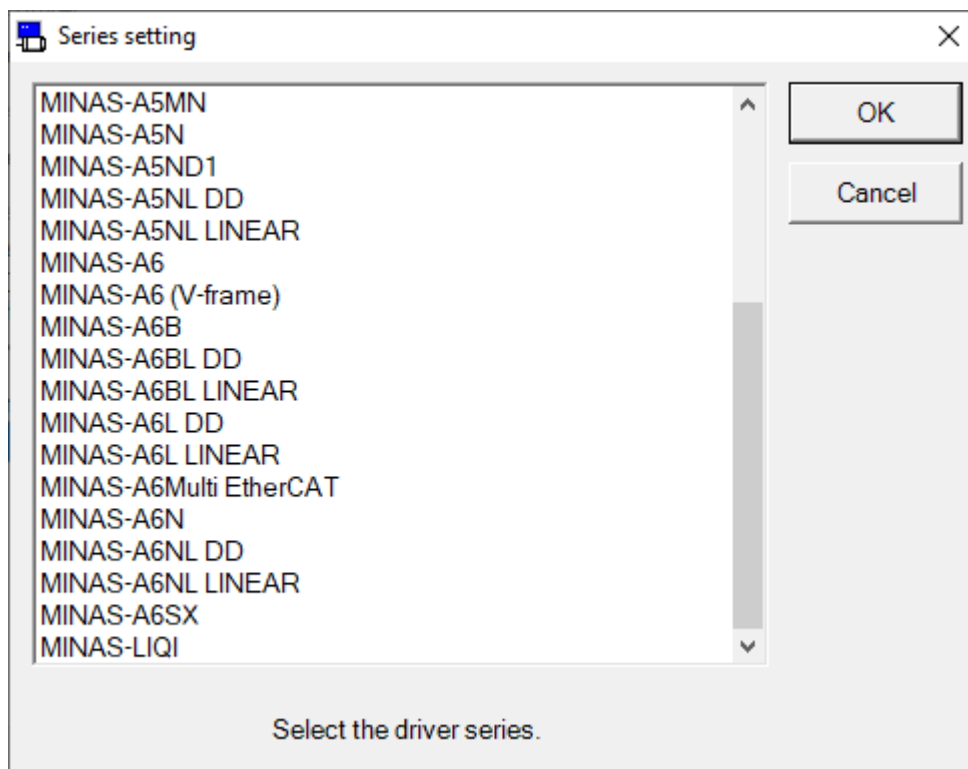

< When changed >

< When not changed >

6. The series that have been added are available for selection in the series setting screen.

Notes 1) You cannot delete the MINAS-A5 series, which is a standard model. However, update by “reference” is possible.

Notes 2) You cannot delete or update current selected series.

If you want to delete or update current selected series, please retry after switching to the other series.

Notes 3) The series definition in “Disable Series List” with a yellow background color does not exist in the installation folder of PANATERM.

So, if you delete that series, it will not be displayed “Disable Series List”. If you do not have a backup, you cannot restore.

Notes 4) When you update a series definition, some of the previous settings are initialized.

Parameter screen

In a parameter screen, parameter check of drivers, modification of parameters, saving parameters into files and some other operations on parameters are available.

Note) Please modify parameters with enough care after reading the driver's instruction manual or technical reference carefully, as some parameters give large effect to operations of drivers or motors.

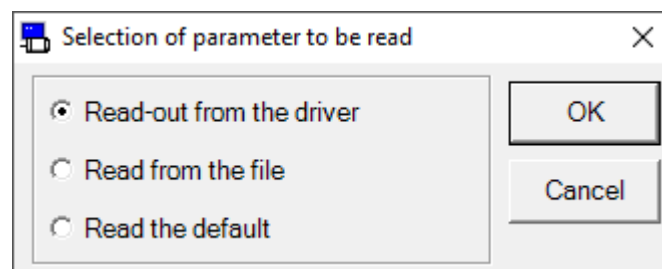

Open the Parameter window

1 Start "PANATERM".

(Please refer to Article 5. Start up and Close down in details)

2 Click "Parameter" of the tool bar on the main screen.

3 Selection of parameter to be read window is displayed.

4 Select the origin of parameters, and click.

"Read - out from the driver"

The parameters set in the driver are read communicating the driver connected. If this mode is selected, modifications of the parameter values are reflected to the driver immediately.

"Read from the file"

Parameter files already edited (.prm5) are read. Parameter modifications are not reflected to the driver connected unless "Transmit the parameter to the driver" is executed when they are "Read from the file".

"Read the default"

Default set values saved at the time of installation is read. The parameter modifications are not reflected unless "Transmit the parameter to the driver" is executed as the case of "Read from the file".

5 Click “OK”. The Parameter window is opened.

The screenshot shows a software window titled "Parameter(Read-out value from the drive)". The window has a toolbar with icons for Read, Save, Cmmt, Rcv, Trans, Prnt, Exit, EEP, Screen, Comp, Initial, and Bin/Hex. Below the toolbar, there is a dropdown menu set to "Position control" and a tree view showing "Initially(Position)". To the right of the tree view, there is a text box with instructions: "By the selecting the theme from the left above, and selecting the sub-theme from the left below, the related parameters can be displayed. To display all parameters in numerical order, please select the 'Parameter list'. Please double-click the sub-theme left below to refer the details of each sub-theme. Parameter value can be changed in two ways. One way to press the Enter key after the input. Another way to click <Change of set value> button." A "Change of set value" button is located to the right of this text.

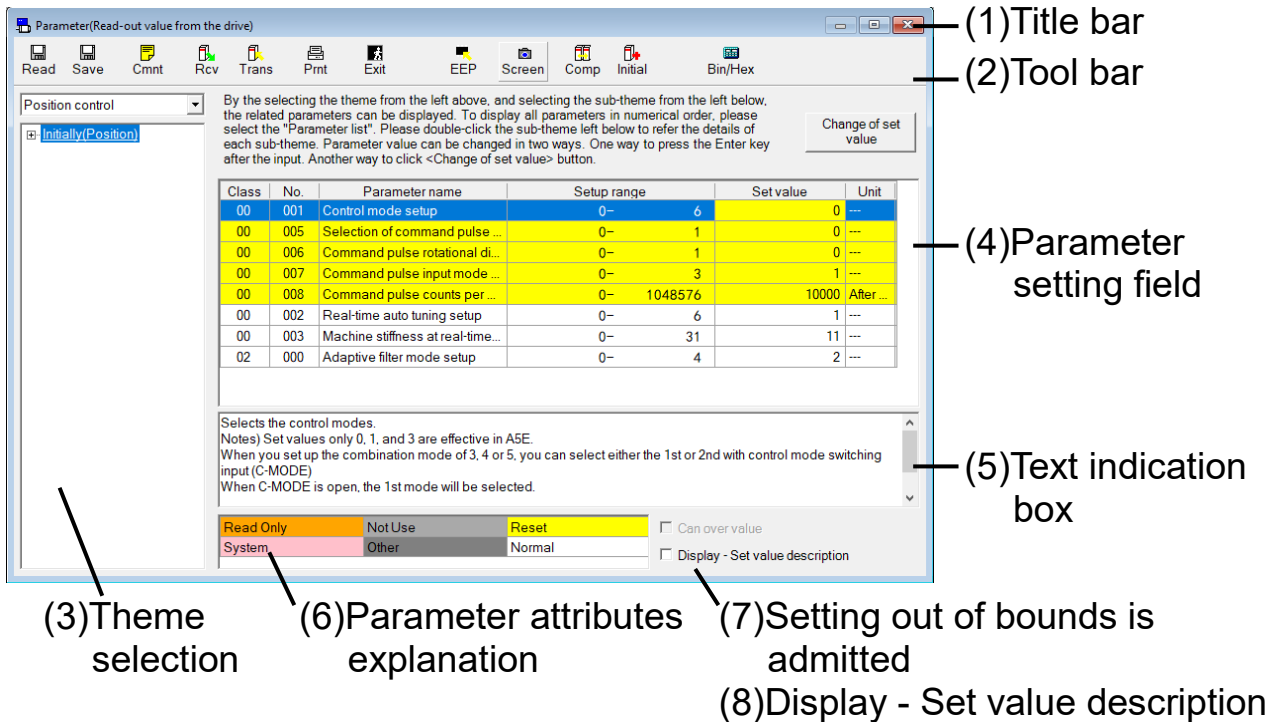

Class	No.	Parameter name	Setup range	Set value	Unit
00	001	Control mode setup	0- 6	0	---
00	005	Selection of command pulse ...	0- 1	0	---
00	006	Command pulse rotational di...	0- 1	0	---
00	007	Command pulse input mode ...	0- 3	1	---
00	008	Command pulse counts per ...	0- 1048576	10000	After ...
00	002	Real-time auto tuning setup	0- 6	1	---
00	003	Machine stiffness at real-time...	0- 31	11	---
02	000	Adaptive filter mode setup	0- 4	2	---

Below the table, there is a text box with the following content: "Selects the control modes. Notes) Set values only 0, 1, and 3 are effective in A5E. When you set up the combination mode of 3, 4 or 5, you can select either the 1st or 2nd with control mode switching input (C-MODE) When C-MODE is open, the 1st mode will be selected." Below this text box, there are two rows of buttons: "Read Only", "Not Use", "Reset" and "System", "Other", "Normal". To the right of these buttons, there are two checkboxes: "Can over value" and "Display - Set value description".

Close the Parameter window

Click  (Exit) on the tool bar.

Structure of Parameter screen

(1) Title bar

The origins of reference of parameters reference are displayed. Following buttons are used to operate windows.

Display the window in full screen

Close the window

(2) Tool bar

Saving, reading, some other basic operation commands on parameters are listed.

(Read)

Reads parameters from files (.prm5).

When this button is effective, a parameter file can be specified by drag and drop.

(Save)

Writes parameters to files (.prm5).

(Comment)

Makes comments attached to parameters files.

(Receive)

Receives parameters from the driver.

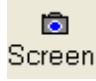

(Transmit)

Sends parameters to the driver.

(Print)

Prints parameters.

	(Exit)	Closes parameter screen.
	(EEPROM)	Write parameters to EEPROM of the driver.
	(Screen)	Captures the screen and save into a file.
	(Compare)	Compares parameters on editing with other parameters.
	(Initialize)	Initialize parameters of the driver.
	(Binary/ Hexadecimal)	Enter the number of binary and hexadecimal values of the selected setting.

(3) Theme selection

If the parameter classification is selected from the sub theme, related parameters are indicated in the parameter setting field.

The Help indicated by double clicking the underline of the sub theme.

Please refer to the manual of drivers or technical reference regarding the details of sub theme.

(4) Parameter setting field

Editing and setting of parameters are available.

“Class”	Parameter classifications are indicated.
“No.”	Parameter numbers are indicated.
“Parameter name”	Parameter names are indicated.
“Setup range”	Maximum & minimum value of parameter setting is indicated.

“Set value”

Parameter value. Its value can be modified.

Parameters with  on the set values are set with the combo boxes. After selecting the values from the combo boxes, input the [ENTER] key or click

 (modification of set value).

Parameters without  on the set values, are inputted with the number keys directly, or modified clicking  and changing the values. To set the values, input the [ENTER] key or click  (modification of set value).

If the [ESC] key is inputted, the value is return to the original one.

“Unit”

Units of the parameter set values are indicated.

(5) Text indication box

Explanations regarding selected parameters.

(6) Parameter attributes explanation

Explanations regarding of parameter attribute. Back ground colors of parameters indicate the attributes.

(7) Can over value

Without communication with drivers, if a check mark is inputted on “Can over value”, settings out of bounds can be available. Setting with combo boxes is not available with check mark on “Can over value”.

(8) Display - Set value description

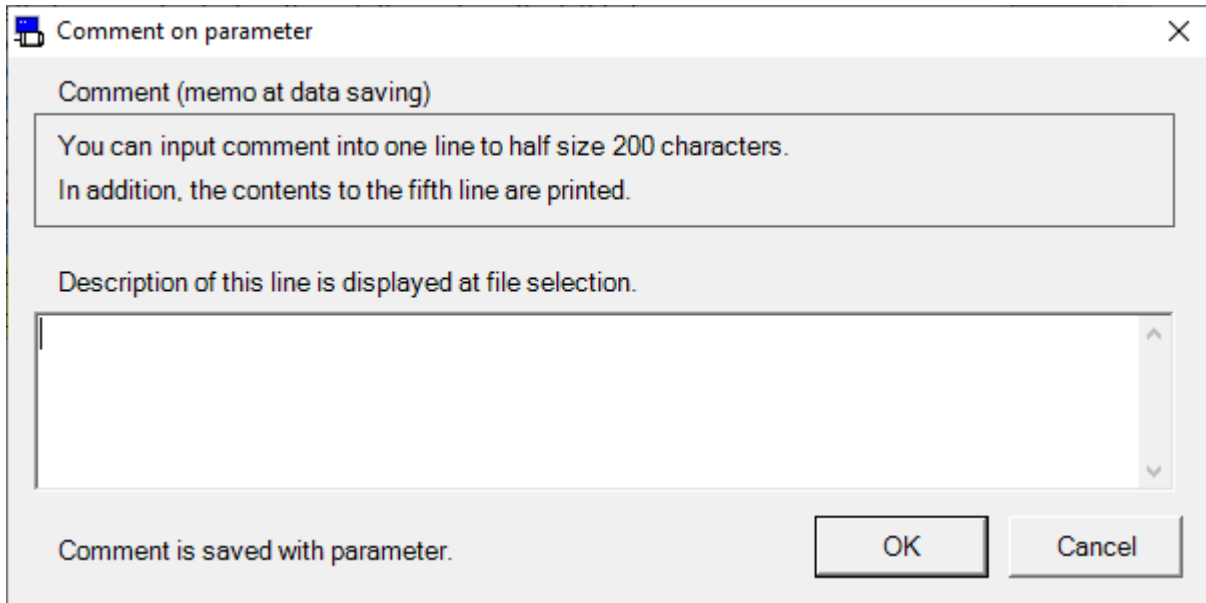

The combo box and the decimal point are displayed when checking it. You can display more details of the parameters, when check on “Display - Set value description”.

Comment

On saving set parameters in a file, comments can be saved together. These comments do not effect operations of the driver.

Making Comment

- 1 Click  (Comment) on the tool bar, and open the comment window.

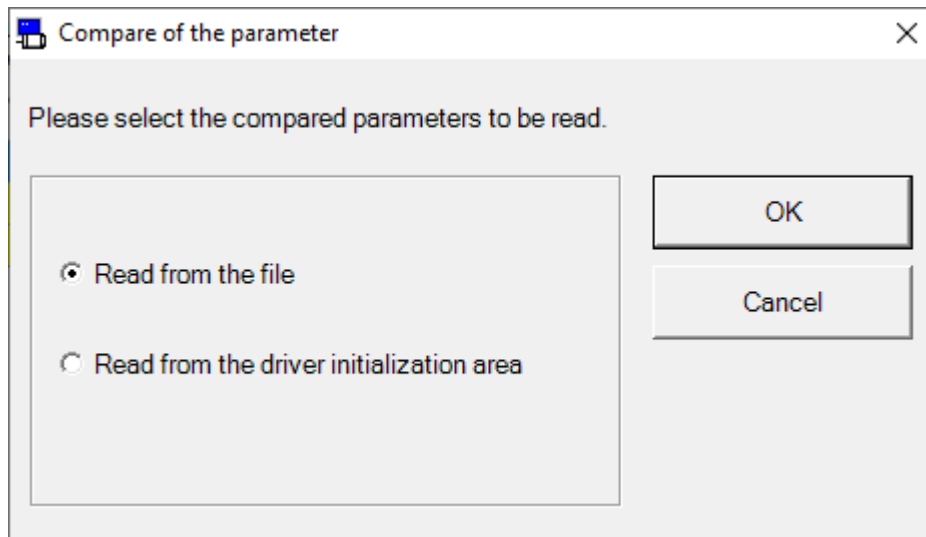

- 2 Click comment box and input comments.
- 3 After completing comment input, click "OK".

Comparison

Parameters being edited can be compared with other parameters.

Comparison of parameters

- 1 Click  (Comparison) on the toolbar, and open the parameter comparison window.

- 2 Select "Read from the file" or "Read from the driver initialization area", and click "OK".
In case "Read from the file" is chosen, please select the file (.prm5) to be compared.

3 Comparison result of parameters is displayed.

Compare of the parameter

Display the comparison edition(difference) at the parameters comparison.

[From] MADHT1507__ 20140210

[To] Sample.prm5

Class	No.	Title	From	To
00	000	Rotational direction setup	0	1
00	003	Machine stiffness at real-time auto tuning	11	13
00	013	1st torque limit	300	500
01	000	1st gain of position loop	320	480
01	001	1st gain of velocity loop	180	270
01	002	1st time constant of velocity loop integration	310	210
01	004	1st time constant of torque filter	126	84
01	005	2nd gain of position loop	380	570
01	006	2nd gain of velocity loop	180	270
01	009	2nd time constant of torque filter	126	84
02	000	Adaptive filter mode setup	2	0
05	012	Over-load level setup	50	0
05	014	Motor working range setup	5	10
05	022	2nd torque limit	300	500
05	025	External input positive direction torque limit	300	500

Decimal point is displayed

Save OK

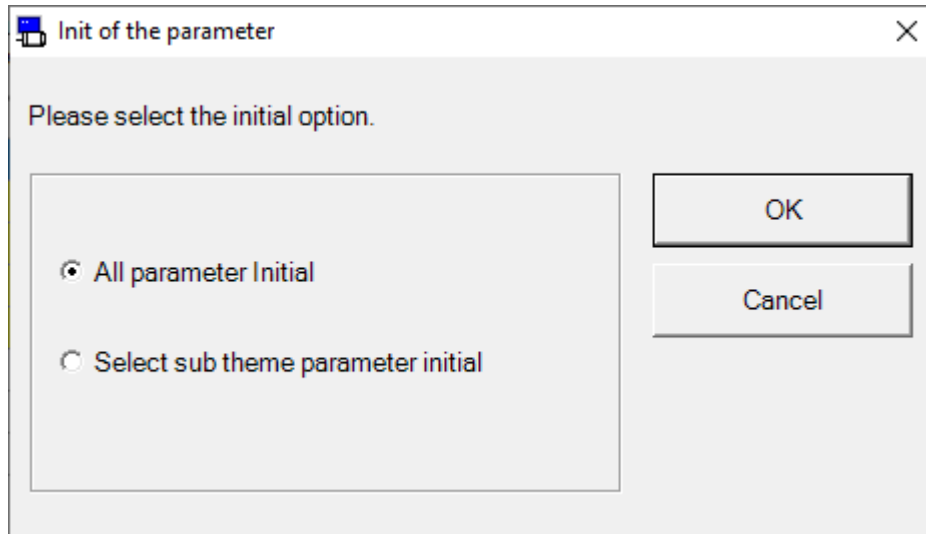

4 Click "Save", comparison result of parameters can be saved at a file.

Initialization

Parameters can be initialized to the default values. The initialized parameters are written to also the EEPROM. To save current parameters, please save the parameters before initialization.

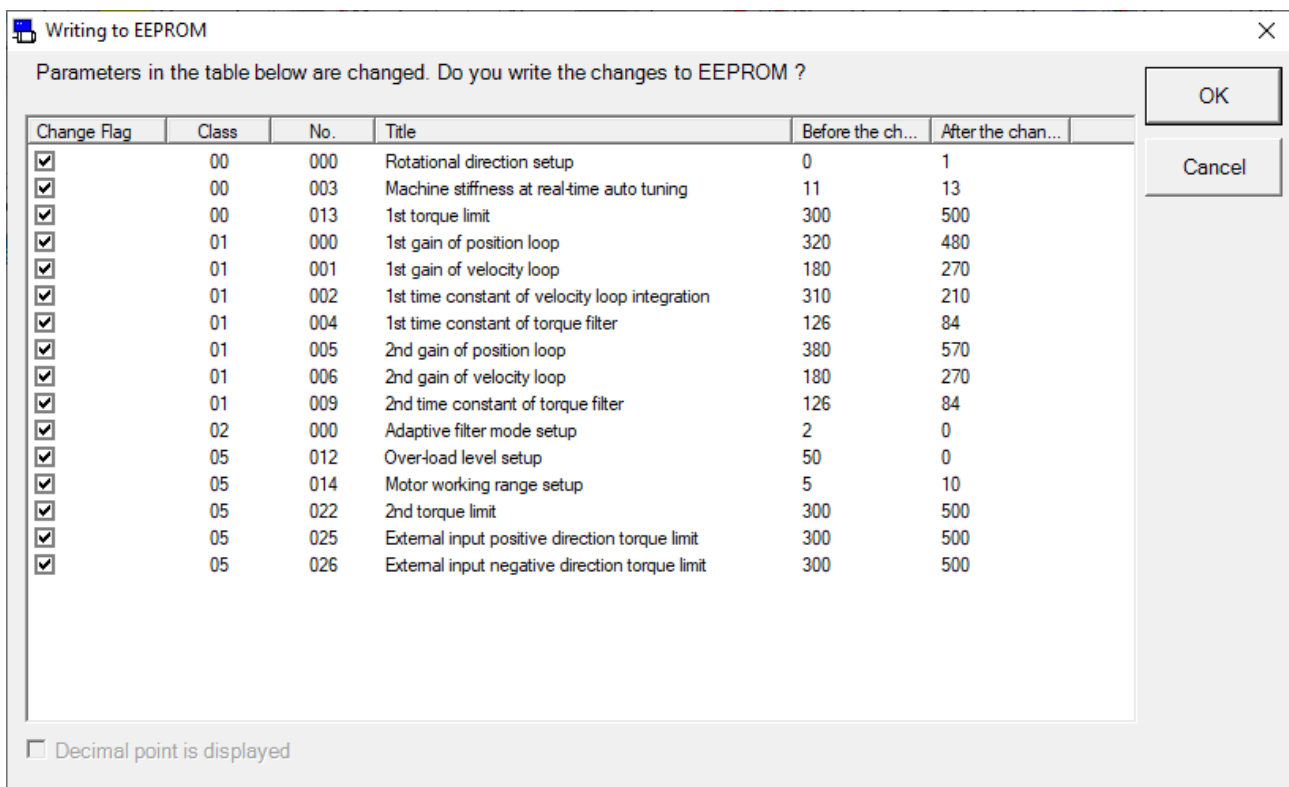

Initialization of parameters

- 1 Click  (Initialization) and open the initialization window.

- 2 Select “All parameter initial” or “Select sub theme parameter initial”, and click “OK”.

3 Set “Change Flag”.

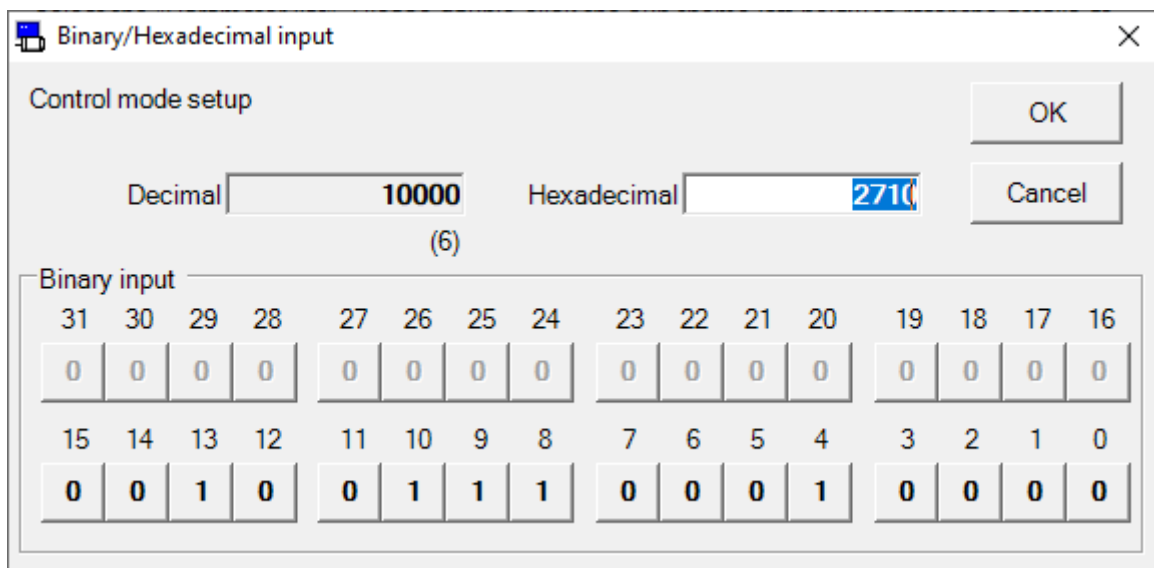

4 Click “OK” Button.

Binary/Hexadecimal

You can enter binary or hexadecimal values for the selected parameter.

Entered in binary/hexadecimal

- 1 Click  (Binary/Hexadecimal) and open the Binary/Hexadecimal input window.

Control mode setup

Decimal Hexadecimal

(6)

Binary input

31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16
0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0
15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
0	0	1	0	0	1	1	1	0	0	0	1	0	0	0	0

- 2 When you enter hexadecimal numbers, please press the [ENTER] key after typing. When you enter binary numbers, please press the button for corresponding to each bit.

* If you enter beyond the parameter ranges is displayed within the limited value of the bottom of the decimal.

- 3 After completing value input, click "OK".

- Notes 1) Please refer to the manual of the driver or technical reference for details of each parameter's function and so on.
- Notes 2) Even if parameters are sent to the driver, parameters are turned to the original value before modification if the power supply of the driver is turned off without writing to EEPROM of the driver. Parameter modifications list are displayed on EEPROM writing. Please check the modification carefully.
- Notes 3) Do not turn off the power supply of the PC during writing to EEPROM of the driver. Data context cannot be guaranteed if the power supply is turned off during writing.
- Notes 4) Some parameters become valid after modifications to the new data, writing EEPROM, and power supply reset. (On inputting, that issue is displayed. Please refer to the manual of the driver or technical reference and confirm on the objective parameters)
- Notes 5) Parameter screen indication may be different from the actual parameter value of the driver in case PANATERM function windows which change the parameters (ex. Trial Run, Pin Assign, Analog Input) is opened. In such case, press the reception button and update the parameter of the driver to the latest one.
- Notes 6) The parameter screen cannot open during opening some screens. For more information please refer to page 224 "Parameter screen behavior".

Monitor screen

You can display and check the operation conditions of Driver and motor, in - out put signal and internal status. And you can record the monitoring data in long times and play it back on the screen.

Note) When you use RS232 communication with the communication speed of less than 4800 bps, please do not make a monitor cycle into 1 second.

Open the Monitor window

1 Start "PANATERM".

(Please refer to Article 5. Start up and Close down in details)

2 Click "Monitor" of the tool bar on the main screen.

3 The Monitor window is opened.

The screenshot displays the 'Monitor' window for a 'Control Mode: Position control' system. The window title is 'Monitor Control Mode: Position control'. The interface includes a toolbar with 'Monitor mode' set to '1s', and buttons for 'Save', 'REW', 'Play', 'FF', 'Stop', 'Info', and 'Screen'. The date and time are shown as '03/11/2019 14:53:09'. The main area is divided into several sections:

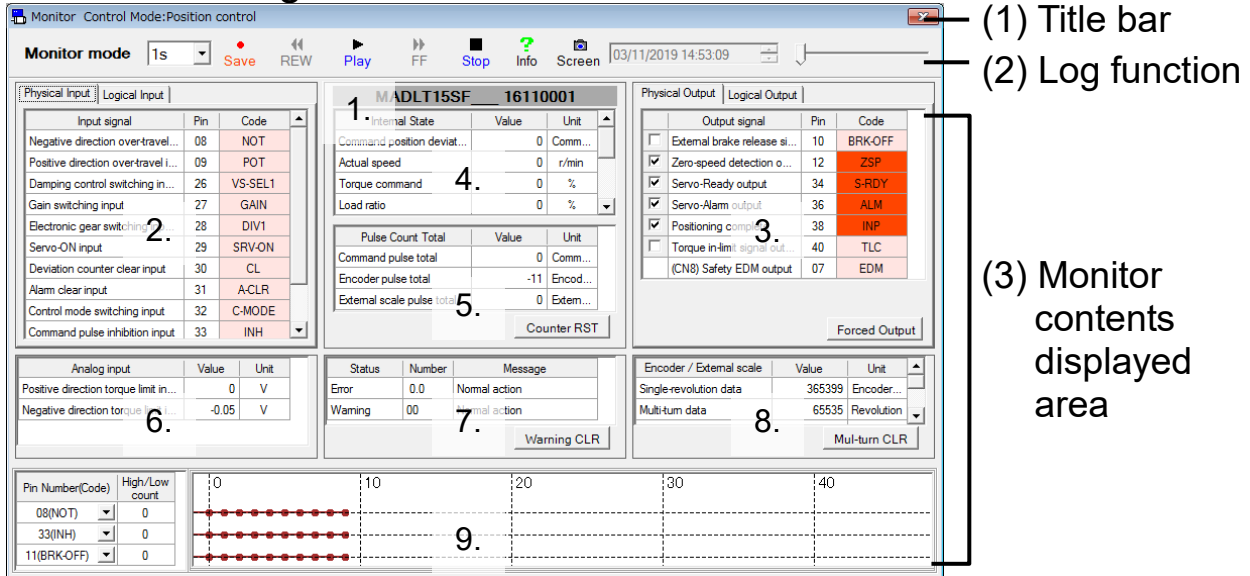

- Physical Input / Logical Input:** A table listing input signals, pins, and codes. For example, Pin 08 (NOT), Pin 09 (POT), Pin 26 (VS-SEL1), Pin 27 (GAIN), Pin 28 (DIV1), Pin 29 (SRV-ON), Pin 30 (CL), Pin 31 (A-CLR), Pin 32 (C-MODE), and Pin 33 (INH).
- MADLT15SF 16110001:** Internal state table showing values for Command position deviation, Actual speed (0 r/min), Torque command (0 %), and Load ratio (0 %).
- Pulse Count Total:** A table showing Command pulse total (0 Comm...), Encoder pulse total (-11 Encod...), and External scale pulse total (0 Extem...).
- Physical Output / Logical Output:** A table listing output signals, pins, and codes. Checked items include Zero-speed detection (12 ZSP), Servo-Ready output (34 S-RDY), Servo-Alarm output (36 ALM), and Positioning complete (38 INP). Other items like External brake release (10 BRK-OFF) and Torque in-limit signal (40 TLC) are unchecked.
- Analog input:** A table showing Positive direction torque limit (0 V) and Negative direction torque limit (-0.05 V).
- Status:** A table showing Error (0.0 Normal action) and Warning (00 Normal action).
- Encoder / External scale:** A table showing Single-revolution data (365399 Encoder...) and Multi-turn data (65535 Revolution).
- Pin Number(Code) High/Low count:** A table showing counts for Pin 08 (NOT) as 0, Pin 33 (INH) as 0, and Pin 11 (BRK-OFF) as 0.

Close the Monitor window

Click  of upright on the window.

Structure of Monitor screen

Indication of signal name is different in the motor model.

(1) Title bar

Control mode is displayed. You can operate window.

(2) Log function

You can record log of monitoring contents and play it back.

Monitor mode (Display of operating conditions)

Display the log operating function.

(Setting the communication of Opening time)

Set the communication of opening time between Driver and PC. You can chose 1s, 5s or 10s.

(Start Log file output)

Start Log file output.

(Rewind)

Rewind log file which is playing it back. You can shoes 2 times, 4 times, 8 times or 16 times.

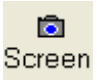

(Play back) / (Pause)

Select Log file and play back/stop. When this button is effective, a log file can be specified by drag and drop.

(Fast forward)

Fast forward Log file. You can choose two times, 4 times, 8 times or 16times.

	(Stop)/(Start)	Stop/Restart of Monitoring operation. When you record Log and restart it, Record and restart is finalized.
	(Information)	The relevant page of the operating instructions for driver. (Only MINAS-A5 is supported)
	(Screen)	Captures the screen and save into a file.
	(Display of Time)	Display the present time. When you are play it back, recorded time is displayed.
	(Slider)	Display the present time in all log data.

(3) Monitoring Contents display area

Display monitoring information.

1. Driver Model name / Driver Serial Number
Display Driver Model name and Serial Number.
2. Input signal conditions monitoring
Display input signal condition. Using tab, you can select “Physical Input” and “Logical input”.
Display Input signal condition to Physical Input - Driver.
Red: COM (-) connection
Pink: Open
Logic input - Display signal condition of Driver.
Red: Active
Pink: Inactive
3. Output signal condition monitoring
Display output signal condition. By using Tab, you can switch “Physical output” and “Logical output”.
Physical output
Display output signal condition from Physical output - Driver.
Red: Output Transistor ON
Pink: Output Transistor OFF
Logical output
Display Signal condition of Logical output - Driver Internal part.
Red: Active
Pink: Inactive

4. Internal State Monitoring
Display the internal condition of Driver.
5. Pulse Count Total monitoring
Display the Pulse count total of Command / Encoder / External Scale taken in by driver.
“Counter RST” is toggle Button, with a timing of counter reset, PANATERM is recording 3 pulse count total as offset value and then, after that this shows value deducting this offset value. If you again click it, Offset value is clear and display the Pulse count total itself from original driver.
6. Analog input Monitoring
Display the electric voltage value of Analog input.
7. Alarm / Warning Monitoring
Display present alarm and warning of driver.
8. Encoder / External Scale information monitoring
Display Encoder/External scale information.
If you click “Mul-turn CLR”, Multi-turn data recorded by encoder is clear to 0, and all encoder error shall be cleared.
Note) Please refer to the remarks when you use multi-turn clear. And it is necessary for you to restart when you clear the encoder error.
9. Digital input / output signal monitoring
Display up to 3 the physical input / output signal’s changed number of times.
As driver is counting changed number of times, you can find the shorter changed signal than communication intervals on monitor screen.
Note) Standardly display signal level, display more than 2 times changed signal on communication interval in the red square.
Note) If the display is not updated in time, it will be displayed at a low level.

Forced Output Button

When this button is pushed, and OK button is pushed with Dialogue of confirmation, is shifts to the Input / output confirmation mode. In the case of standard type, the front panel display is fixed to the monitoring display input / output display.

You can check only in Input / output confirmation mode. If you input Physical input, the driver is not operative. And against Physical output, with left check box, you can compulsorily turn On/Off the output signal.

Note) If you need the driver of Input / Output confirmation mode to be returned to the standard conditions, you shall restart the driver.

Notes 1) Using USB communication or RS232 communication as data receipt between Driver and PC, there are accidental errors, delay of display value on the screen, recoded monitoring value, and time on the log file and actual driver value and recoded time.

Notes 2) There are accidental errors of recoded time between monitoring display, recoded log file and many data in a time. If you need more detail information, please refer to the wave graphic.

Notes 3) The (+) and (-) symbols are not displayed even if the polarity is present.

Notes 4) Monitoring function is not precious measurement instrument. Monitoring display shall be used as rough estimate.

Notes 5) The monitor screen cannot open during opening some screens. For more information please refer to page 225 "Monitor screen behavior".

Notes 6) Physical input and physical output signal names are displayed according to the current parameter settings.

Alarm screen

In case that driver's front panel LED is flashing like that Motor is not operative etc., you can check the error conditions.

Open the Alarm window

- 1 Start "PANATERM".
(Please refer to Article 5. Start up and Close down in details)
- 2 Click "Alarm" of the tool bar on the main screen.
- 3 When not communicating with driver, the selection screen of a parameter is displayed. Please select the parameter file saved when alarm was reported.
- 4 The Alarm window is opened.

(1) Title bar

You can operate this window.

(2) Tool bar

(Alarm clear) You can clear the present error. Removing the cause of errors, you click this button, present error is clear and it operates correctly. However, you cannot delete the error that you cannot clear by alarm clear input signal. Please turn off the driver and remove the cause of error, please turn on the electric power again.

(Record clear) You can delete error record.

(Print) Print out the information about the errors.

(Exit) Close the Alarm window.

(Information) The relevant page of the operating instructions for driver. (Only MINAS-A5 is supported)

(Screen) Capture the screen and record the screen into the file.

(3) Tab

Switch the display of “Now Error / Warning” and “Past Error History”

(4) Now Happened Error display area

1. Display present all happening error numbers and names.
Displayed error on the top is an error displayed on the front panel.
2. Display the selected error's causes and countermeasures.
3. Display the motor internal conditions on the selected alarm happening.

(5) Warning display area

1. Display all present happening warning numbers and names.
2. Display selected warning causes and countermeasures.

(6) Error record display area

1. Display error record order, error number and error names.
2. Display the selected error causes and countermeasures.
3. Display the motor internal conditions on the selected alarm happening.

- Notes 1) There are some errors, which is tripped, but is not left as error record. Please refer to the driver manual or technical reference.
- Notes 2) Error records are saved up to 14 times. If errors happen over 14 times, oldest record is deleted in order.
- Notes 3) Internal conditions of motor is recorded up to 3 times on alarm happening. When the alarm is generated immediately after turning on of the power supply, an internal state of the motor might not be able to be acquired standardly.
- Notes 4) The alarm screen cannot open during opening some screens. For more information please refer to page 226 "Alarm screen behavior".
- Notes 5) The control mode in the motor internal state at the time of the alarm indicates the state in the driver and does not match Pr0.01 of the driver.

Gain Tuning screen

You can adjust servo gain parameter with the driver's auto adjustment function. And you can use easy monitoring that automatically measures the tuning index.

Note) If you adjust auto adjustment function of the driver please refer to application scope and remarks specified in the driver manual or technical reference.

Gain tuning cannot be performed through RS232 communication.

Open the Gain Tuning window

1 Start "PANATERM".

(Please refer to Article 5. Start up and Close down in details)

2 Click "Tuning" of the tool bar on the main screen.

3 The Gain Tuning window is opened.

Gain Tuning

Rcv Exit EEP Info Screen

Close the Gain Tuning window

Click  (Exit) on the tool bar.

Structure of Gain Tuning screen

(1) Title bar

You can operate this window.

(2) Tool bar

(Receive)

Receives parameters from the driver.

(Valid only when the Parameters tab is selected)

(Exit)

Close the gain tuning window.

(EEPROM)

Write parameter value to EEPROM of driver.

(Information)

The relevant page of the operating instructions for driver. (Only MINAS-A5 is supported)

(Screen)

Capture the screen and record it to the file.

(3) Tab

Switch Gain tuning setting area display to “Real time auto-gain tuning”, “Damping control”, ”Control filter & Other”, “Parameter”.

(4) Gain tuning setting area

You can perform Real time auto-gain tuning, Adaptive filter, Damping control, Control filter and the parameter setting.

(5) Easy monitor display area
 You can measure the tuning index easily.

Method of performance of real time auto-gain tuning

1 Select a tab of “Real-time auto-gain tuning”.

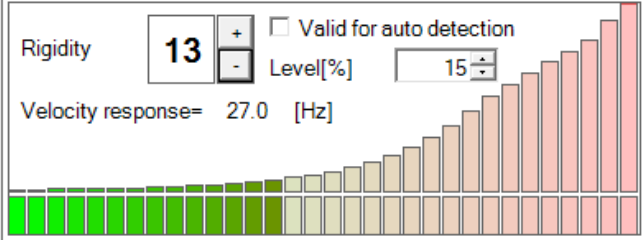

<When driver doesn't have 2 degrees of freedom control (MINAS-A5 etc.)>

Real-time auto-gain tuning | Damping control | Control filter & Other | Parameter

2 In accordance with the usage of your machine, you can change the “Select Mode” and “Rigidity”.

If you select “6: Customize” in “Select Mode”, you can specify the detail function individually. In “Customized Setting”, “Real time Auto Tuning Custom Setting” window will open, please set the conditions.

- * If you open customized setting window and push OK, at the same time, mode selection is changed to “6: Customize”.
- * “Real time Auto Tuning Custom Setting” are not available in 2 degrees of freedom control mode.

3 You can operate the motor using “Trial Run” of PANATERM or external command. If motor revolves, presumed value of load characteristics is displayed.

4 Using wave graphic function of PANATERM or easy monitor, you can check the result of moving of motor and adjust the “Rigidity” setting. “Rigidity” setting can be performed by right side of figures (+) or (-).

Valid for auto detection

On the conditions that Gain Tuning screen is open, and the mode setting is from 1 to 4, you can use auto suppression of oscillation. Checking this check box, the rigidity setting is automatically down on motor oscillation happenings, and motor oscillation is suppressed.

Change of parameter about load characteristics

If you manually change the parameter of load characteristic, please click “Edit” button and change the setting value. After changing, you click “Send” button, all parameter shall be transmitted to driver. During editing, the block display is not renewed. Please click the “Monitor” button to restart monitoring.

Setting method of adaptive filter

1 Select the tab of “Damping control”.

Real-time auto-gain tuning | **Damping control** | Control filter & Other | Parameter

Adaptive filter
When a value is indicated on the resonance frequency, activate the adaptive filter or press the editing button and then press set
Resonance Vibration Frequency= 5000 [Hz]
Filter Mode: 1:1 filter is valid

No.	Setting	Clear	Frequen	Width	Depth
1st			5000	2	0
2nd			5000	2	0
3rd			5000	2	0
4th			5000	2	0

Edit Send

Damping control
When a value is indicated on the vibration frequency, press the editing button and then press the setting button
Vibration Frequency= 0.0 [Hz]
Damping control: 0: Simultaneously

No.	Setting	Clear	Frequency	Filter
1st			0.0	0.0
2nd			0.0	0.0
3rd			0.0	0.0
4th			0.0	0.0

Damping freq. auto-set Edit Send

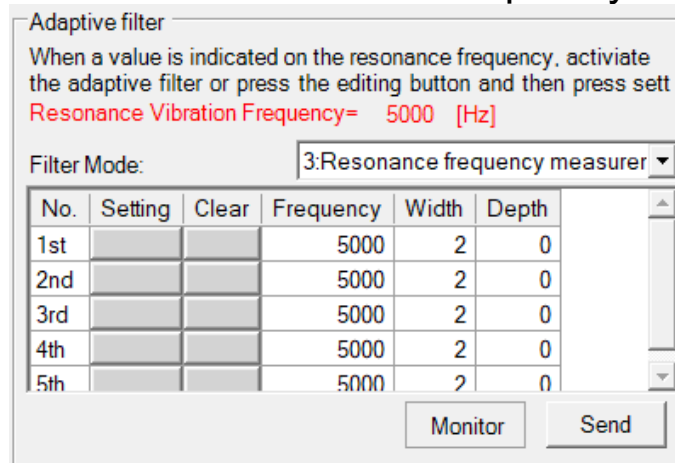

2 For the adaptive filter to be effective, please change “1:1 filter is valid” or “2: 2 filters are valid”. If the vibration happens in motor speed, other figures except for 5000[Hz] as “Resonance Vibration Frequency” are displayed. And 3rd or 4th notch filter is automatically set.

3 If you want to clear the adaptive result, please change the “Filter Mode” to “4: Clear result of adaptation”.

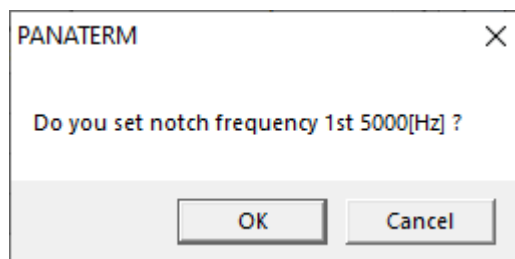

* “Resonance Vibration Frequency” display shows the latest frequency when the vibration is detected by adaptive operation.

Resonance frequency measurement mode

- 1 If you measure only the resonance frequency without notch filter setting, please change Adaptive filter mode to “3: Resonance frequency measurement”.
- 2 If the vibration happens in motor speed, the figures except for 5000[Hz] as “Resonance Vibration Frequency”.

- 3 If you set this frequency with notch filter, after push the “Edit” button, please click the “setting” button, check the contents of following confirmation screen and click “OK”.

- 4 If you clear resonance frequency you set, after push the “Edit” button, please click the “Clear” button whose number you want to clear. As same confirmation screen is displayed, if ok, please click the “OK” button.

Change of parameter about Notch filter etc.

If you need to manually change the parameter about notch filter etc., please click “Edit” button and change the setting value. After changing them, if you click “Send” button and all parameter in this block shall be transmitted to the driver. During editing, as the display of this block is not renewed, please click “Monitor” button again.

Setting method of damping control

1 Select the tab of “Damping control”.

Real-time auto-gain tuning | **Damping control** | Control filter & Other | Parameter

Only the extraction parameter is displayed

- 3 Please select the setting value of parameter you want to edit.
 After changing the setting value of the parameter you want to edit, enter the [ENTER] key or click the “Change of the value” button.
 Note) Only the parameter that checks “Extract” is displayed when “Only the extraction parameter is displayed” is checked.

Measurement the tuning index by easy monitor

Trial No. [times]	Stabilization time [ms]	INP crack count [times]	Vibration level [%]	Effective load factor	Tack [ms]	Instructed ti [ms]
-------------------	-------------------------	-------------------------	---------------------	-----------------------	-----------	--------------------

1 Set the easy monitor setting.

“Mes. mode” : Set the measurement mode.

With position instruction: Measure the tuning index from the start of position commanded to next start of position command or shorter measurement time.

Uniformity time: Measure the tuning index from the each time data set by measurement time.

With speed instruction: Measure the tuning index from the start of speed command to next start of speed command or shorter measurement time.

“Mes. count” : Set the measured number of time.

“Mes. time[ms]” : Set the maximum measuring time period [ms].

2 Click “Measurement start”

Note) If you click “Measurement start”, the displayed index shall be cleared.

3 The measured results shall be renewed until the trial No. meets the measured number of time, or you click “Measurement stop”.

【Monitoring Item】

The tuning indices are as below.

Stabilization time	Times [ms] from the finalization of positioning command passing to the range of completion of positioning of the position deviation. Or times[ms] from the below speed command still value to Zero speed range of Motor speed
INP crack count	Count [times] is a number in which two times (the on signal that entered range of in-position first and the off signal when starting) are pulled from the number of times into which INP1 output changes between tact.
Vibration level	Conversion value from vibration level to torque value[%]
Effective load factor	Torque command effective value among tact[%]
Tact	Measured time[ms] for one trial
Instructed time	Time[ms] from the trial start to final position command or the time by detecting more than speed command sill value
Speed zero cross	Count [times] is a number in which two times (the on signal that entered range of in-position first and the off signal when starting) are pulled from the number of times into which ZSP output changes between tact.
Instructed speed min	Command speed minimum value [r/min] during trial
Instructed speed max	Command speed maximum value [r/min] during trial
Motor speed min	Motor speed minimum value [r/min] during trail
Motor speed max	Motor speed maximum value [r/min] during trail
Torque instruction min	Torque command minimum value [%] during trial
Torque instruction max	Torque command maximum value [%] during trial
Pos. following error min	Positioning deviation minimum value during trial [Command unit]
Pos. following error max	Positioning deviation maximum value during trial [Command unit]

The following indices are expressed as a model with 2 degrees of freedom control (MINAS-A5II, MINAS-A6 etc.).

Micro vibration count	The number of times that the mark of actual speed with a blind sector changed [Times]
Overshoot	The overshoot amount of an instruction position deviation [Command unit]
Command movement	The amount of instruction position change between tact [Command unit]
INP crack count of settling	The number of times of an INP crack after instruction ejection [Times]

Notes 1) If you click "Measurement start" or servo on the driver during the measurement, Trial No. shall be starting from 1.

Notes 2) If the measurement time is shorter than the tact, there is possibility that the results of settling time etc. are not correctly measured. Please assure the enough measurement time.

Notes 3) If you record the monitoring results, please select the cell of the monitoring result you need to record and select "Ctrl+C" and make a copy. Please paste and record the table calculation soft or text editor.

Notes 4) If you operate it with quicker tact by the 1s of easy monitor interval, trial No. may be skipped value. Please operate it with more than 1 s of tact command as long as possible.

Notes 5) Parameter set on this screen is inputted into Driver. As PANATERM does not maintain this value, please perform the recording it to EEPROM of driver after completion of adjustment.

Notes 6) The gain tuning screen cannot open during opening some screens. For more information please refer to page 226 "Gain tuning screen behavior".

Wave form graphic screen

You can measure the motor operative waveform and display the results by the graphic. And these measurement conditions, results and parameters can be recorded in the wave form data file.

Open the Wave form graphic window

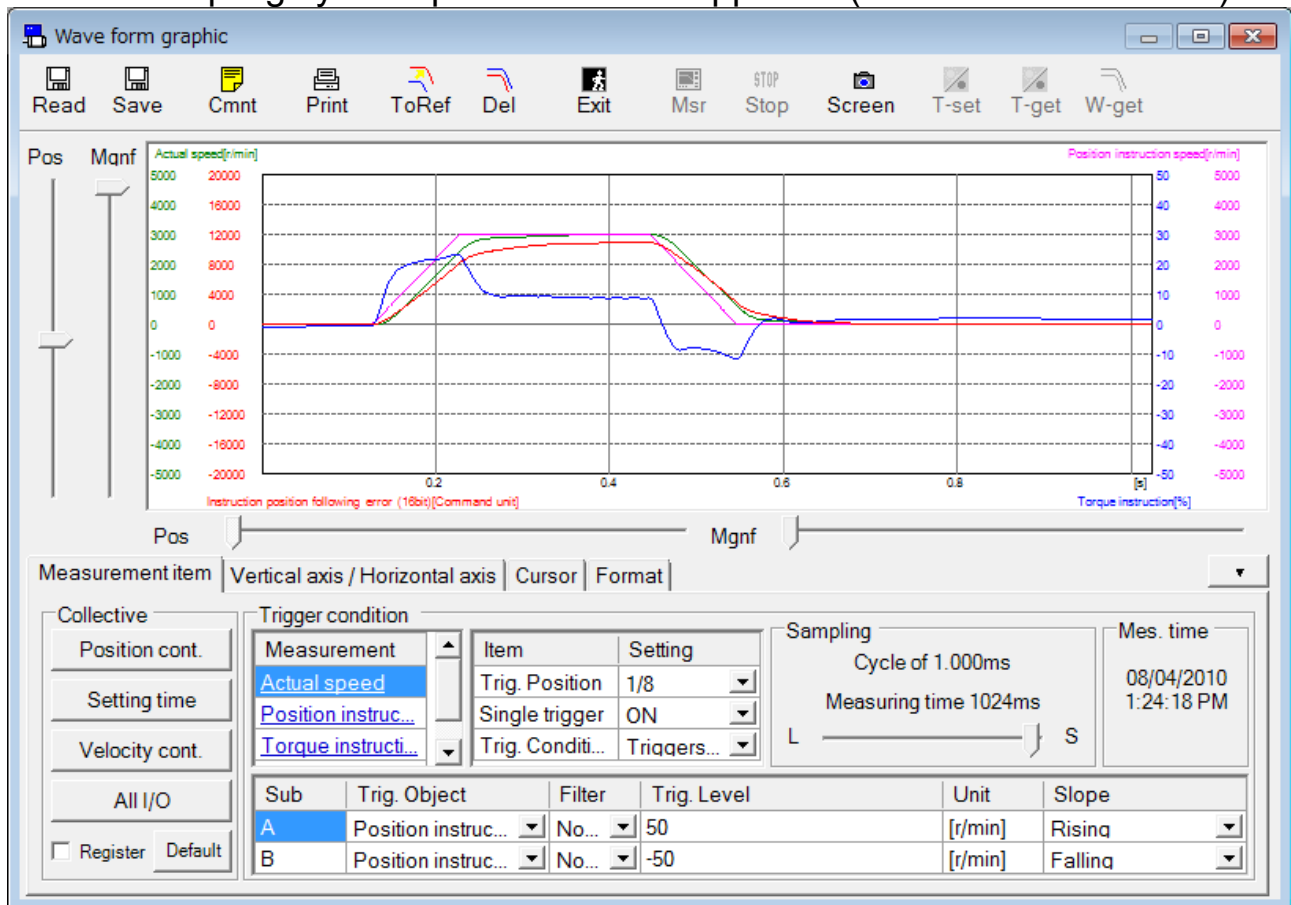

1 Start "PANATERM".

(Please refer to Article 5. Start up and Close down in details)

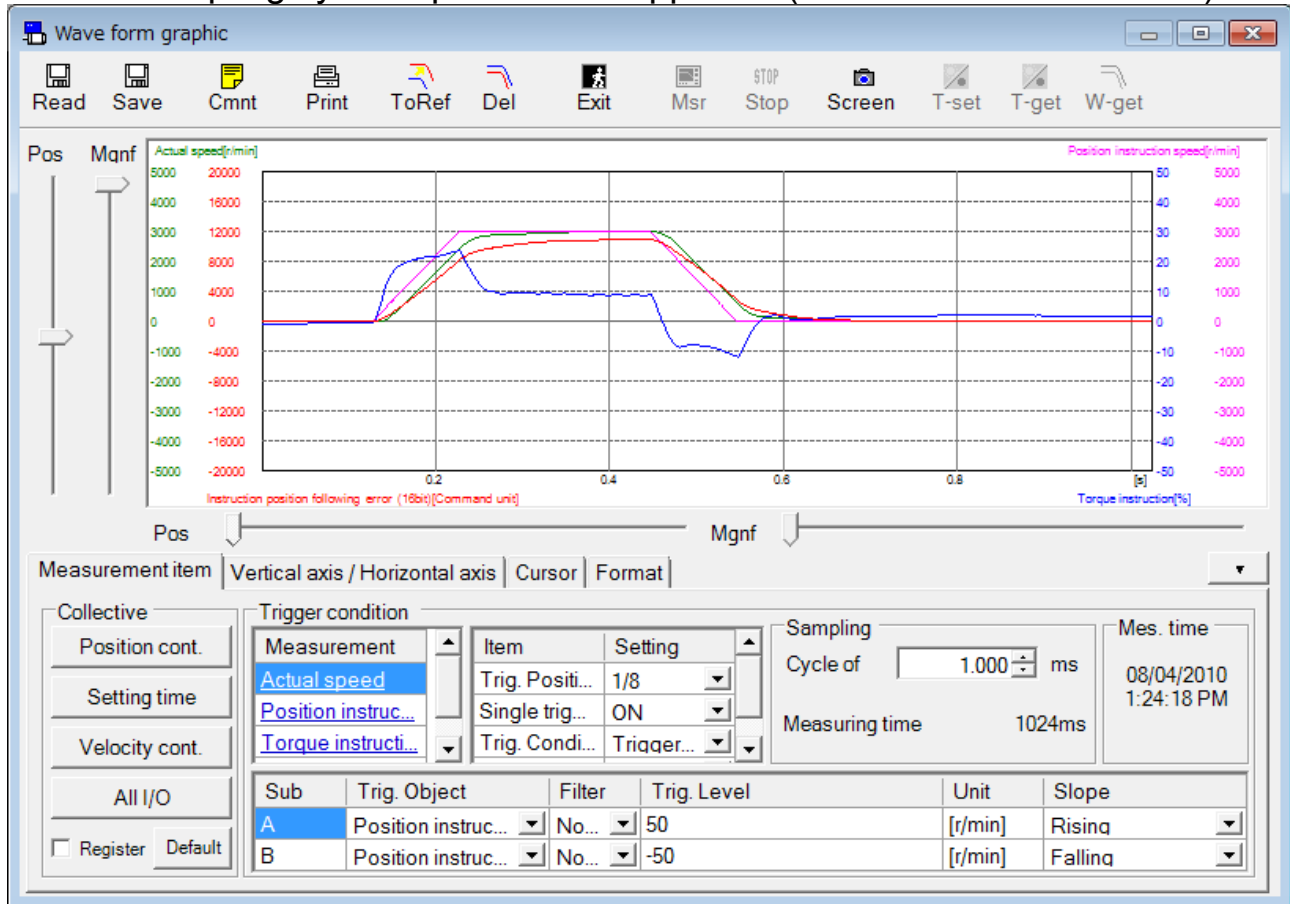

2 Click "Wave Graphic" of the tool bar on the main screen.

3 The Wave form graphic window is opened.

<When sampling cycle expansion is not supported (MINAS-A5 series etc.)>

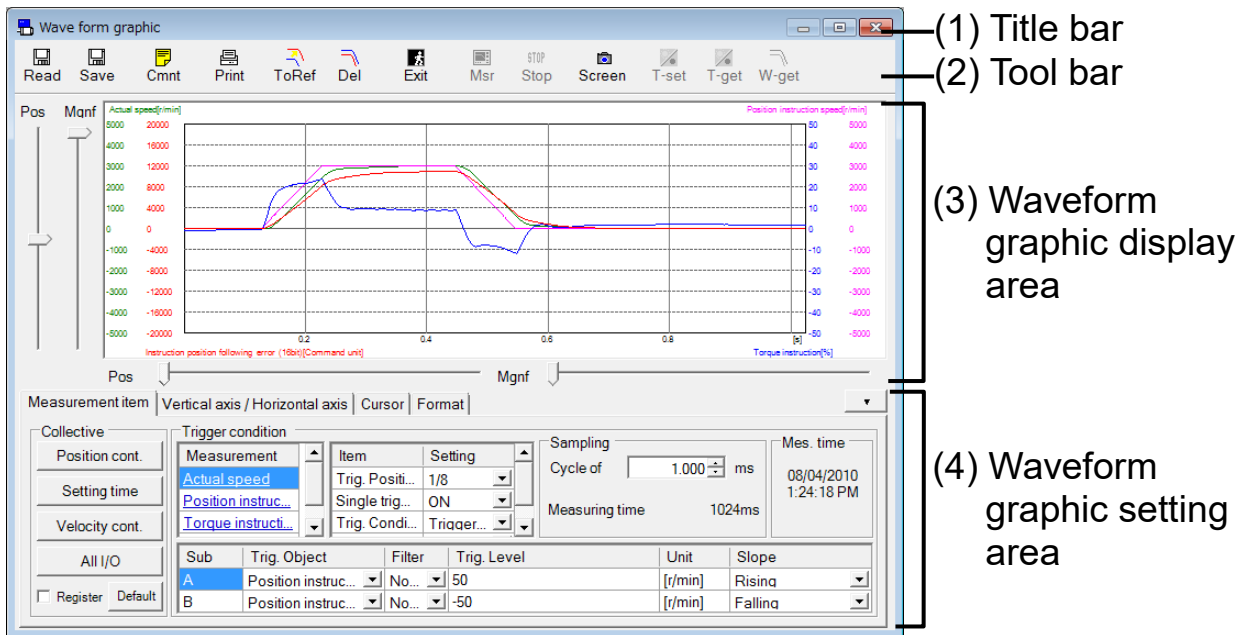

<When sampling cycle expansion is supported (MINAS-A6SF series etc.)>

Close the Wave form graphic window

Click  (Exit) on the tool bar.

Structure of Wave form graphic screen

(1) Title bar

You can operate title bar window.

(2) Tool bar

The operation commands are listed up.

(Read)

Read the file to record the measurement data.

When this button is effective, a file can be specified by drag and drop.

(Save)

Save the measurement data into the file

(Comment)

Make the comments to be attached on the wave form graphic file.

(Print)

Print out the results of wave form graphic measurement

(Copy to reference)

Make a copy of observed wave form to reference wave form

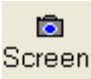

(Delete the reference)

Delete the reference wave form

(Close)

Close the wave form graphic window

	(Measurement)	Start the measurement of wave form graphic. Wait until the measurement conditions are met, and then execute a series of operations to acquire and display the measurement results from the driver.
	(Stop)	Stop the wave form graphic measurement
	(Screen)	Capture the screen and record the file
	(Trigger set)	Set the measurement conditions to driver and start measurement
	(Trigger acquisition)	Acquire and display the measurement conditions set in the driver
	(Wave data acquisition)	The measurement results and the measurement conditions are acquired and displayed from driver

(3) Waveform graphic display area

In accordance with setting contents on (4) Wave form graphic operation setting area, the operation wave form of the measurement subject is displayed.

(4) Waveform graphic setting area

Designate the graphic display conditions and select the tab and set each items.

If you click the upper right  of waveform graphic setting area, the wave form graphic setting area shall be hided. If you click , wave graphic setting area shall be displayed again. You can record these measurement conditions in the file.

Note) Please refer to the “Record and loading of wave form graphic measurement conditions” about the record method.

Operation of the wave form graphic display area

In the wave form graphic display area, you can enlarge or scale down the graphic display with following pointed out mouse pointer and horizontal / vertical slider bar.

(1) In case you use mouse pointer

Use the mouse pointer when you enlarge or scale down overall wave form.

If you select the tab of “Measurement item” ”Vertical axis / Horizontal axis” ”Format”, Mouse pointer is a reading glass icon. At that time, following operation is effective.

Left click : enlarge the position of mouse pointer

Right click : scale down the position of mouse pointer

Drag : enlarge the selected rectangle scope

When you select tab of “Cursor”, Mouse pointer is Star icon. At that time, the following operation is effective.

Left click : designate the position of cursor 1

Right click : designate the position of cursor 2

Drag : enlarge the selected rectangle scope

When mouse pointer is near cursor, it shall be arrow icon. At that time, the following operation is effective.

Drag : move the nearby cursor

(2) In case that you use slider bar

By operation of the slider bar on wave graphic display area right edge (vertical axis), you can enlarge, scale down, move only the selected operation wave form subjects by tab.

Vertical axis “Pos” Slider bar:

If you drag the bar upright, operated subject wave form display is moving up, if you drag it down, the wave form is also moving down. And if you click the bar up and down, or if you push the key [↑] [↓] on the selected conditions of slider bar, the wave form is moving by one scale on vertical axis

Vertical axis “Mgnf” Slider bar:

If you drag the bar up, you can enlarge the operation subject vertical axis on the center of the screen. If you drag it down, it is to scale down.

If you operate the low edge (horizontal axis) slider bar, you can enlarge / scale down / move the time axis of total wave form.

Horizontal axis “Pos” Slider bar:

If you drag the bar to the right side, the overall wave form is moving to the left, the wave form is moving to the right. If you click the left right of the bar or push the key [←] [→] in the selected slider bar condition, you can move the wave form left right by 1/32 on the screen.

Horizontal axis “Mgnf” Slider bar:

If you drag the bar to the right, you can enlarge the operation subject horizontal axis on the middle of the screen. If you drag it to the left, it shall be scaled down.

Notes 1) If you cannot find the wave form, it cannot be displayed so well, please push the “Auto range” button of “Vertical axis / Horizontal axis” tab and bring back to the overall display.

Notes 2) When you confirm the detail data of signal size 32 bits, once you display the overall wave form and move the part you want to watch to the middle of the screen with position slider.

Wave form graphic setting area

<Measurement Item Tab>

Designate the measurement item, trigger conditions, sampling cycle.

The screenshot shows the 'Measurement Item Tab' interface with the following components:

- Measurement item:** Vertical axis / Horizontal axis | Cursor | Format
- Collective:** Position cont. (1.), Setting time, Velocity cont., All I/O, 2. Register, 3. Default
- Trigger condition:** Measurement 4. (Actual speed), Position instruc..., Torque instructi...
- Item 5. Setting:** Trig. Position (1/8), Single trigger (ON), Trig. Condi... (Trippers...)
- Sampling 6.:** Cycle of 1.000ms, Measuring time 1024ms, L, S
- Mes. time:** 12/26/2008 10:20:19 AM
- Table:**

Sub	Trig. Object	Filter	Trig. Level	Unit	Slope
A 7.	Position instruc 8.	N 9.	50 10.	[r/m 11.	Rising 12.
B	Position instruc...	No...	-50	[r/min]	Falling

“Collective”

1. Setting button:

The measurement condition is set from the wave form graphic file registered in button.

2. Register:

When you check “Register” and push the button that registers, selection of the file window is displayed. Please select the file where the measurement condition that you want to register is included.

3. Default:

The content of each setting button is read from the following files.

Position cont. : Measure the signal related to position control as position command speed trigger.

Settling time : Measure a signal related to the measurement of settling time as a trigger of position command passing completion.

Velocity cont. : Measure a signal related to the speed control as a trigger of the speed control command.

All I/O : Measure the analog input and physical input / output signal without trigger

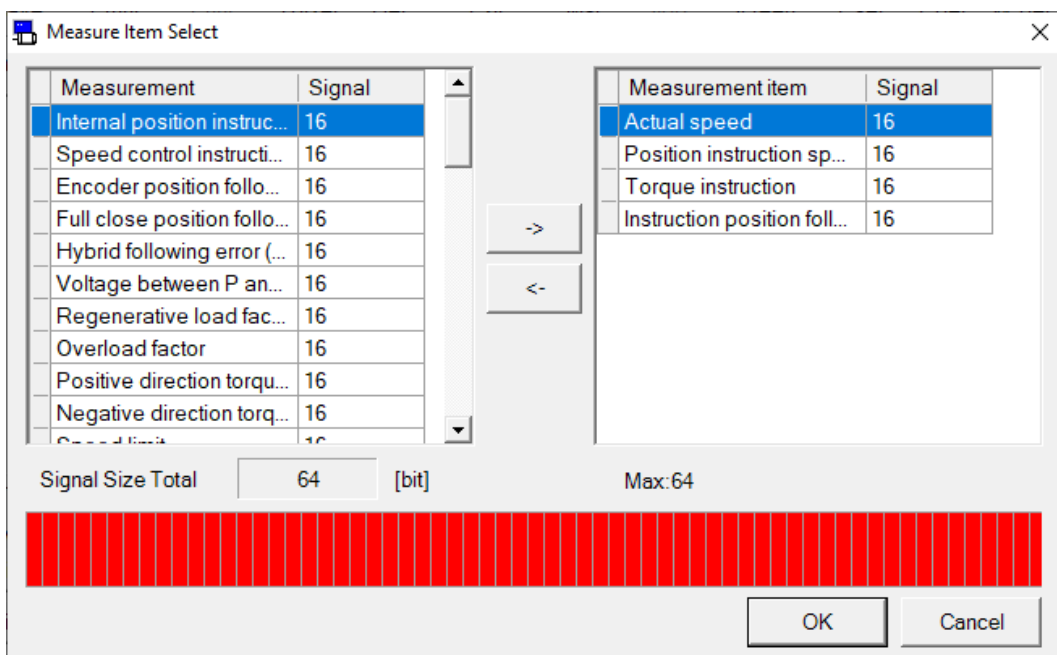

“Trigger condition”

4. Measurement item:

You can measure the subject that you want to measure in your choice. If you double click the measurement items, you can open the window of the “Measure Item Select”.

You can select the signal size up to total 64[BIT].(In MINAS-A6 series, you can select the signal size up to total 128[BIT]. Digital signal can be selected up to 16[BIT])

If you select the digital signal on the measurement items, analog signal and digital signal shall be displayed on the wave form graphic display area.

5. Trigger Item:

Perform the setting related to the trigger.

Trig. Position - Set the trigger happening position during the measured period.

Single trigger - When single trigger is on, the measurement can be performed only one time. If it is “Off”, until you click “Stop” button, we will continuously perform the measurement.

Trig. Condition - Set the trigger conditions.

Data average - Set the enable / disable of the data averaging function during the measurement.

* Data average can be set only when sampling cycle expansion is supported.

6. Sampling: Set the sampling cycle. (When sampling cycle expansion is supported, the sampling setting method changes from the slider method, enabling the setting of a longer sampling cycle.)
7. Sub: You can set the trigger conditions to 2 kinds (A / B).
8. Trig. Object:
Set the trigger subjects. You can select one of the analog signal or digital signal.
9. Filter:
Set the filter the number of the time for the subjected number of the times signal. Depending on the trigger subjects, there are the items that you cannot set. If you cannot set the filter, “---” is displayed.
10. Trig. Level:
Set the level of the trigger. If the trigger subject is analog signal, it is displayed by figures. If it is digital signal, it sets ON / OFF.
11. Unit: Display the trigger subjected unit to be selected.
12. Slope:
Set the slope to be triggered. You can select it from “Leading”, “Trailing”, “Matched”, “Mismatched”, “Greater”, “Less”.

* If you use digital signal for trigger subject, slope setting is “Matched” or “Mismatched”.

<Vertical axis / Horizontal axis Tab>

Designate the wave form graphic conditions

Measurement item | Vertical axis / Horizontal axis | Cursor | Format |

Vertical axis

Operation object:
Actual speed

Auto range
Initialize vertical axis

Prohibit an automatic range

“Operation object”

You can select the operation subject to be designated position and magnification by vertical axis slider bar. You can use analogue signal only.

“Auto range button”

Adequate value shall be automatically adjusted from all the wave form vertical axis position and magnification on the screen display. And minimum (display all data) of horizontal magnification is set.

“Initialize vertical axis button”

All wave form’s vertical magnification is itself and 0 is moving to middle of the screen.

“Prohibit an automatic range check box”

If you check the mark, Auto range is prohibited at the measurement. When measurement conditions are the same, the auto range of a horizontal axis is also forbidden. If there is no check mark, Auto range shall be performed on the wave from each graphic measurement.

<Cursor Tab>

Display cursor and the measured value of cursor 1 and cursor 2.

Measurement item	Vertical axis / Horizontal axis	Cursor	Format						
<input checked="" type="checkbox"/> Display cursor									
Cursor 1									
Cursor 2									
Cursor 1 to the trigger position									
Smoothing: 0									
	Obsrv/R	Unit	Cursor1	Cursor2	Cursor1-Cursor2	Value	Max	Min	Error

Actual	Obsrv	[r/min]	-59	-52	7	61	-45	-77	9.0
Position	Obsrv	[mm]	-63	-64	0.5	66	-67	-68	0.9
Torque	Obsrv	[%]	-3.95	-3.35	0.60	3.37	-2.55	-4.25	0.40
Instruction	Obsrv	[Co...]	-1189	-1133	56	1153	-1111	-1199	23.7

"Display cursor"

When checked, cursor 1 and cursor 2 is displayed.

"Cursor1"

The position of cursol1 can be moved.

You can also specify the position with the left mouse button. You can also click the cursor to move it.

"Cursor2"

The position of cursol2 can be moved.

You can also specify the position with the right mouse button.

You can also click the cursor to move it.

"Value display"

The value of the selected measurement item is displayed.

1. Obsrv/Ref:

Displays whether the waveform is observation or reference.

2. Unit:

The unit of the selected item is displayed.

3. Cursor 1:

The value of the selected item at the time of cursor 1 is displayed.

4. Cursor 2:

The value of the selected item at the time of cursor 2 is displayed.

5. Cursor 1-Cursor 2:

Displays the difference between the values of cursor 1 and cursor 2 of the selected measurement item.

6. Value:

The effective value of the section from cursor 1 to cursor 2 of the selected measurement item is displayed.

If there is no check mark in "Display", the value of all sections is displayed.

7. Max:

The maximum value of the section from cursor 1 to cursor 2 of the selected measurement item is displayed.

If there is no check mark in "Display", the max of all sections is displayed.

8. Min:

The minimum value of the section from cursor 1 to cursor 2 of the selected measurement item is displayed.

If there is no check mark in "Display", the min of all sections is displayed.

9. Error:

The standard deviation of the section from cursor 1 to cursor 2 of the selected measurement item is displayed.

If there is no check mark in "Display", the error of all sections is displayed.

"Cursor 1 to the trigger position button"

Cursor 1 sets the trigger position.

This is displayed when "Display cursor" is checked only.

"Smoothing"

The analog signal is smoothing.

<Format Tab>

Set the display format of the measured wave form.

Measurement item	Vertical axis / Horizontal axis	Cursor	Format	
Measurement item	Obsrv/Ref	Display	Color	Bold
▶ Actual speed	Obsrv	<input checked="" type="checkbox"/>		
Position	Obsrv	<input checked="" type="checkbox"/>		
Torque instruction	Obsrv	<input checked="" type="checkbox"/>		
Instruction position	Obsrv	<input checked="" type="checkbox"/>		

“Measurement item”

Selected measurement item is displayed.

“Obsrv / Ref”

The type of item is displayed (Observed or Reference).

“Display”

Select this item is displayed or is not displayed.

“Color”

Set the waveform color of the measurement item.

Select the color of this item when color cell is double-clicked.

“Bold”

Set the thickness of the waveform of the measurement item.

Select the thickness of this item when color cell is double-clicked.

Measurement of wave form

1 Set the wave form graphic setting.

2 Click  (Measure) of the tool bar.

When the measurement starts, status of measurement is displayed on status bar.

Notes 1) If “T-set” or “Msr” (Measure) button is once clicked, even if you close the wave form graphic display or exit the PANATERM, the driver continues measurement by the trigger condition last set. In this case, the measured data which is triggered by the setting is acquired by pushed the “W-get” button. But if the driver is yet waiting for trigger, displayed communication error dialog box.

Notes 2) When wave form graphic display is closed, measurement condition is saved, and same condition is applied next time.

Reference data

1 After measuring wave form graphic, click  (To Reference) button on the tool bar, and observed data is copied to reference data.

2 Check the “Display” of Reference data from “Format” tab and reference data can be displayed on screen.

Notes 1) The reference data is registered up to 10 sets. If you copy with all the reference waveforms filled, reference 10 will be overwritten.

Notes 2) When measurement item is changed, the reference data is cleared.

Notes 3) The time (horizontal) scale of reference data is fixed at the condition of measurement. Don't read the reference data which has different time scale from wave file.

Save and read the wave graphic data

It is possible to use, and to refer when the parameter setting value at the measurement condition, the result of a measurement, and that time specified when measuring it is preserved in the file, and the measurement is executed again under this condition.

Wave graphic data file : `***.wgd5` or `***.wgd6`

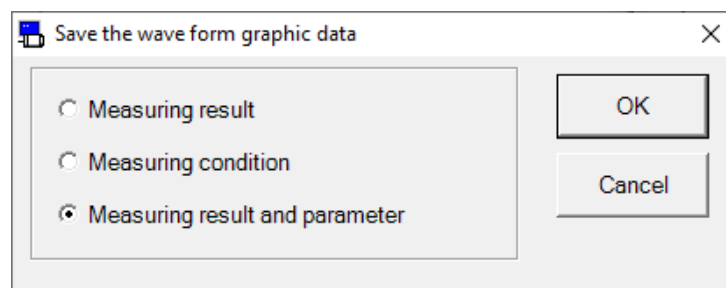

Wave graphic condition file : `***.wgc5` or `***.wgc6`

Wave graphic data and parameter file : `***.wgp5` or `***.wgp6`

* When sampling cycle expansion is supported, files are saved with extensions `wgd6`, `wgc6`, and `wgp6`.

Save to wave graphic data

- 1 Click “Save” button from tool bar.
- 2 “Save the wave form graphic data” window is displayed.

- 3 Select the save item, and click “OK” button.
- 4 Comment input window is displayed.

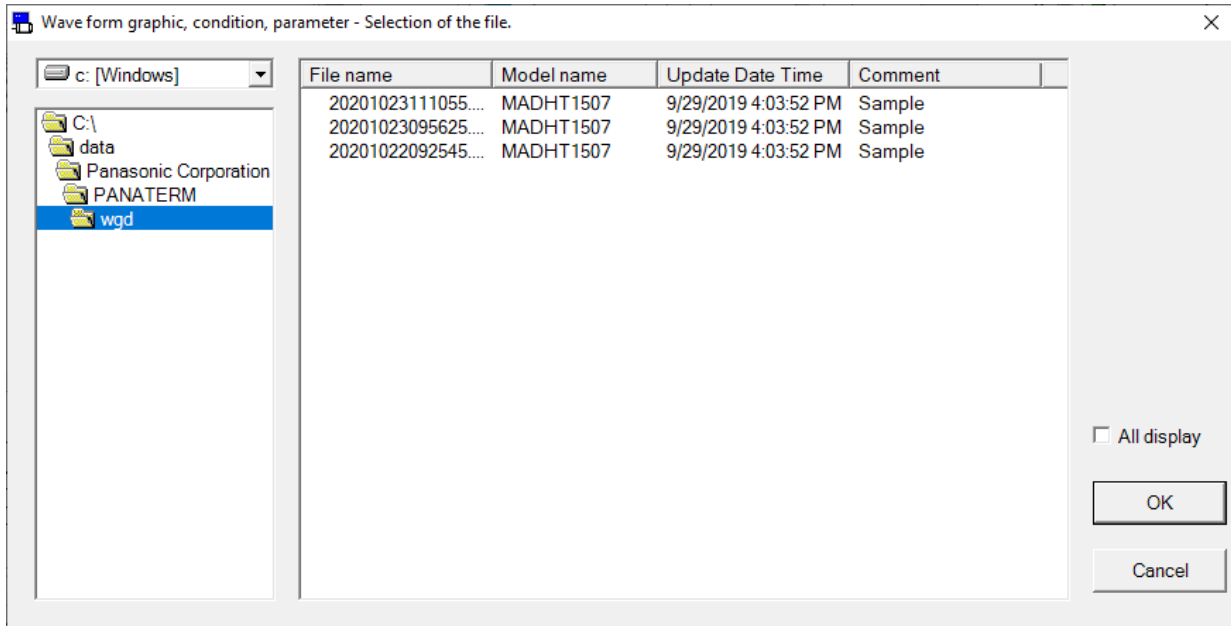

- 5 Click “OK” button, and the file dialog is displayed.

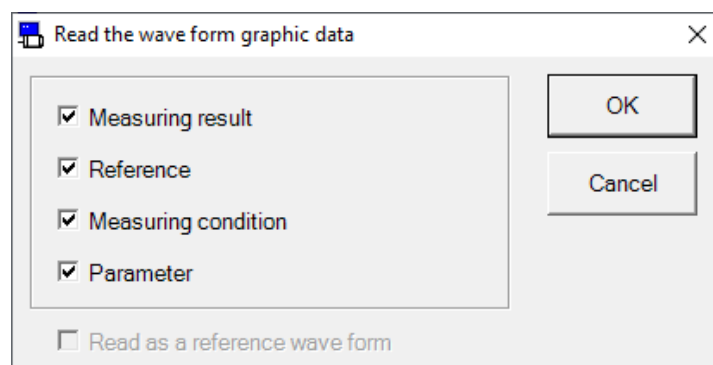

- 6 In the file dialog, specify the name of the file that you want to save.
- 7 Click “Save” button.

Read from wave graphic data

- 1 Click “Read” button from tool bar.

- 2 Select data file to read.
- 3 Click “OK” button.
- 4 Window for “Read the wave form graphic data” will appear.

- 5 Put checks on the items you would like to read, and click “OK”.
The saved waveform for measurement result can be read as reference, if “Read as a reference wave form” is selected.
However the measured condition, and parameters cannot be read, if this is selected.
- 6 Content that was selected will be read.

- Notes 1) The detail of wave form data is referred the driver operation manual or technical reference.
- Notes 2) When sampling cycle is not set minimum value, a part of analog signal are smoothing by the driver.
- Notes 3) The aliasing might be caused and an actually different shape of waves be seen, when sampling cycle is longer than vibration data.
- Notes 4) The communication error is displayed when the driver power supply is off while wave form graphic is measuring. Please close wave form graphic display.
- Notes 5) The wave form graphic function is not precious measurement instrument. The wave form graphic data shall be used as rough estimate.
- Notes 6) “Mes. time” (Measure time) display is the time of receive the wave form data from the driver. Note that the time is not the time of trigger time.
- Notes 7) The wave form graphic screen cannot open during opening some screens. For more information please refer to page 228 “Wave form graphic screen behavior”.
- Notes 8) In the case of network type (MINAS-A5N, MINAS-A5NL, etc.), if a network is established in the state of trigger standby, the detected trigger position may shift.

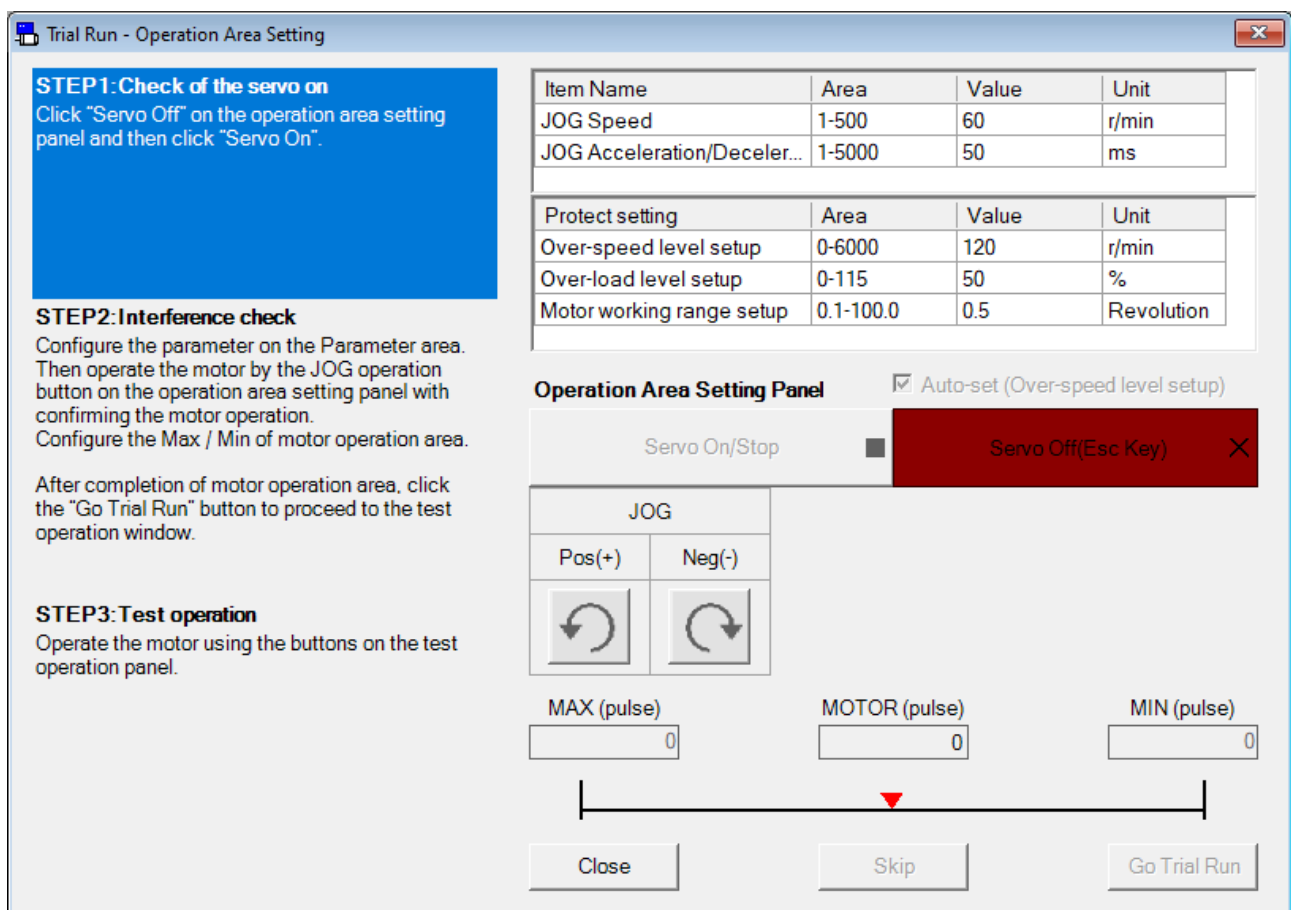

Trial run screen

Motor can be operated as test only with the Drive, and without connecting to the master level equipment.

Note) Parameter settings and Driver's gain tuning will be needed even at the trial run. Please read the operation manual or technical reference to understand the manual content prior to this operation.
Trial run cannot be performed through wireless or RS232 communication.

Open the Trial Run window

- 1 Start "PANATERM".
(Please refer to Article 5. Start up and Close down in details)
- 2 Click "Trial Run" of the tool bar on the main screen.
- 3 The Trial Run window is opened.

Close the Trial Run window

Click "Close" button on the window.

Structure of Trial Run screen

Operation Area Setting window

(1) Title bar

(2) Related parameter

(3) Operation area setting panel

(4) Motor position data

(5) Operation button

(6) How to operation area

Test Operation window (Standard type)

(7) Test operation panel

(5) Operation button

Test Operation window (Shrink type)

(7) Test operation panel

(1) Title bar

Window can be operated.

(2) Related parameter

Speed and Acceleration/Deceleration time can be operated at the Operation area settings window. Speed, Acceleration/Deceleration time, moving length, waiting time properties of JOG/STEP/ZERO can be set.

Notes 1) These parameters will be in PANATERM's default setting, when the Operation Area Setting window is opened. But these will be set the value before opening a Trial run, when the Test Operation window is opened.

Notes 2) Change of setting value will be reflected to the drive at the start of test operation.

Notes 3) Protection function setting will return back to the value before opening the window, when the Operation Area Setting window or the Test operation window is closed.

(3) Operation area setting panel

Test operation can be done with the button below

	Auto-set (Over-speed level setup)	If a check is put in, over-speed level will be changed the twice of JOG speed.
	Servo On / Immediate stop	Turn on the servo feature of motor.
	Servo Off	Turn off the servo feature of motor. Note) Servo feature can be turned off by the ESC key when the window is active.
	JOG Positive(+)	JOG operation can be done to the plus direction when JOG Positive (+) is pressed, and minus direction when the JOG Negative (-) is pressed with the speed on setting.
	JOG Negative(-)	

(4) Motor position information area

MAX : Maximum operation area

MOTOR: Current position

MIN : Minimum operation area

Note) Current position of the motor is the value in command unit with the position when the Servo On as 0.

(5) Operation button

- Close : Close operation area configuration or test operation feature.
- Skip : Test operate without operation area being configured.
- Go Trial Run : Test operate based on configuration.
- Back : Stop test operation, and return to operation area configuration. Test operation window.

(6) How to operation area

This area displays the explanation of the operation method.

(7) Test Operation panel

Test operation can be done with the button below

Change to shrink type /
Change to standard type

A test run screen is changed from standard type to shrink type.
Or it is changed from shrink type to standard type.

Servo On /
Immediate stop

Servo function will be turned on. When motor is in "Servo On" condition, this button will enable an immediate stop or continuous operation.

Servo off

Servo function will be turned off. When window is active the Servo function will be turned off when ESC key is pressed.

JOG
Positive(+)

When check is not on "JOG Cont", then JOG operation will be active when button is pressed, and will be inactive when button is not pressed.

JOG
Negative(-)

If check is on the "JOG Cont" button, then JOG operation will continue until operation area becomes Max/Min. when button is pressed once.

When "Servo On/Stop" is pressed, then motor will immediately stop without time to descend the speed.

When "Pause" is pressed, then motor will stop after descending the speed. Time to descend the speed until stopping the rotation will vary depending on time

needed.

Note) If you would like to cancel the JOG continuous operation, then “Pause” the motor, and then press “Servo On/Stop” button.

PAUSE

Motor will pause and continue the operation.

ZERO

Motor will Step operate until the 0 position.

STEP
Positive(+)

If check is not in the “STEP Cont” checkbox; Step operation will continue when for the configured operation distance when the button is pressed.

STEP
Negative(-)

Motor will immediately stop without speed deceleration time, when the “Servo On/Stop” button is clicked during rotation. Motor will pause after speed deceleration when “PAUSE” button is clicked. When “PAUSE” button is clicked again, then motor will operate towards the targeted position set before pausing.

When check is on the “STEP Cont” checkbox ;

When the button is clicked once, then the motor will operate the “Step operation” for the configured distance to the designated direction, and then operate for same distance to the opposite direction, which will continue this back and forth operation.

When “Servo On/Stop” button is clicked during this continuous operation, the motor will stop without deceleration time, and cancel the continuous operation.

When “PAUSE” button is clicked during the same continuous operation, then the motor will pause and will continue on with the operation when the button is clicked again.

Note) Push “Servo On/Stop” button after “PAUSE” button and STEP continuous operation can be canceled.

Maneuvering Test operation

- 1 Click “Servo Off” on test operation panel at Operation area settings window, and then click “Servo ON” (STEP 1) If there are alarms or errors occurring at this step, eliminate the cause, clear the alarm, and then re - start from step 1.
- 2 Configure the parameter on the Parameter area. Then operate the motor by the JOG operation button on the test operation panel with confirming the motor operation.
Configure the Max / Min. of motor operation area. (STEP 2)
- 3 After completion of motor operation area, click the “Next” button to proceed to the test operation window.
- 4 Operate the motor using the buttons on the test operation panel on the test operation window.

- Notes 1) If warning or error occurs when the trial run window is open, then the communication error will appear on screen. After removing the cause, clear the alarm, and then restart the test run. Also, if a servo-on signal is input from the outside, a communication error will be displayed.
- Notes 2) When open the trial run window, the parameter of protection function setting changes into a default value. When close the trial run window, it returns to the value before it opens. Therefore, please note that the argument value changed on trial run screen might be displayed when the parameter is written from other screens while the trial running.
Moreover, the parameter changed on the trial run screen is not preserved.
- Notes 3) When “Go Trial Run” button is clicked without the operation area configured, and then the error will appear on screen. Please configure the operation area going by what specified above.
- Notes 4) Please be noted that the configured operation area will be canceled, and there will be no limit to the operation area during the test operation.
- Notes 5) Operation area will be cleared when “Servo OFF” is clicked.
- Notes 6) When “Close” button is clicked when the Servo is ON, then the Drive Servo will be turned OFF, and test operation will be stopped.
- Notes 7) When “Servo OFF” or “Back” is clicked, then the Drive Servo will be turned OFF, and operation area will be cleared.
- Notes 8) The trial run screen cannot open during opening some screens. For more information please refer to page 229 “Trial run screen behavior”.
- Notes 9) When drive is not in ready status (Alarm or Main power source is cut off), front panel is used except for monitor mode, or Servo ON is input from outside, then the trial run window will not be able to open or error will be on screen during execution. Please re - execute after these status is eliminated, and the trial run window is closed.

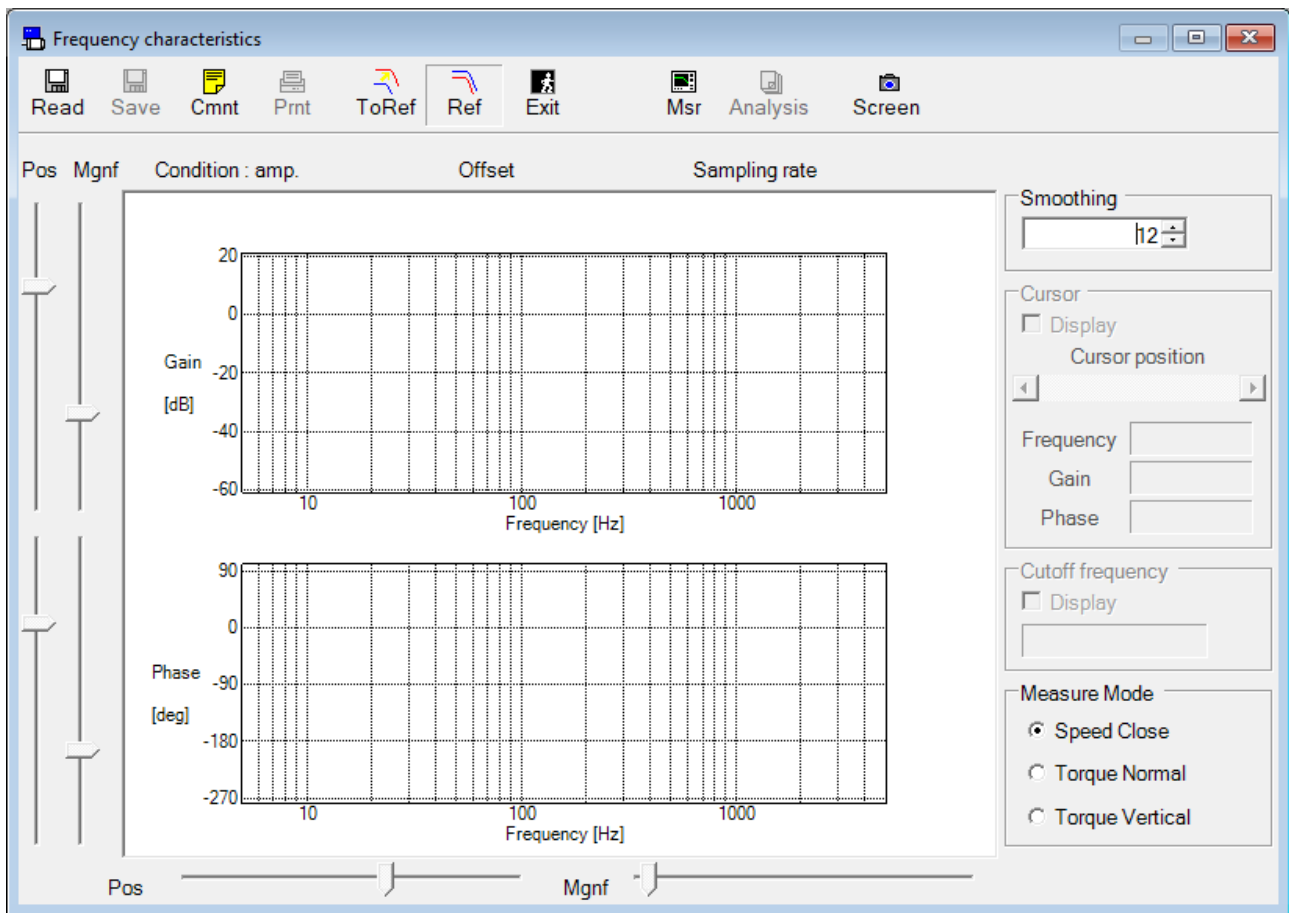

Frequency characteristics screen

Measures the wavelength characteristics including the load, and shows the result in bode plot. Mechanical resonance point or response time can be measured. In addition, the measured result can be saved as file.

Note) Please check with the operation manual or the specification document.
Please execute the measurement in the condition that servo-off can be made anytime as a precaution.
This function should not be used in the case that blistering movement of a motor may break the machine.
Please execute the measurement in the condition of as low gain as possible.
Please note that large setting of offset value may cause exceeding movement limitation.
Frequency characteristics cannot be performed through wireless communication.

Open the Frequency characteristics window

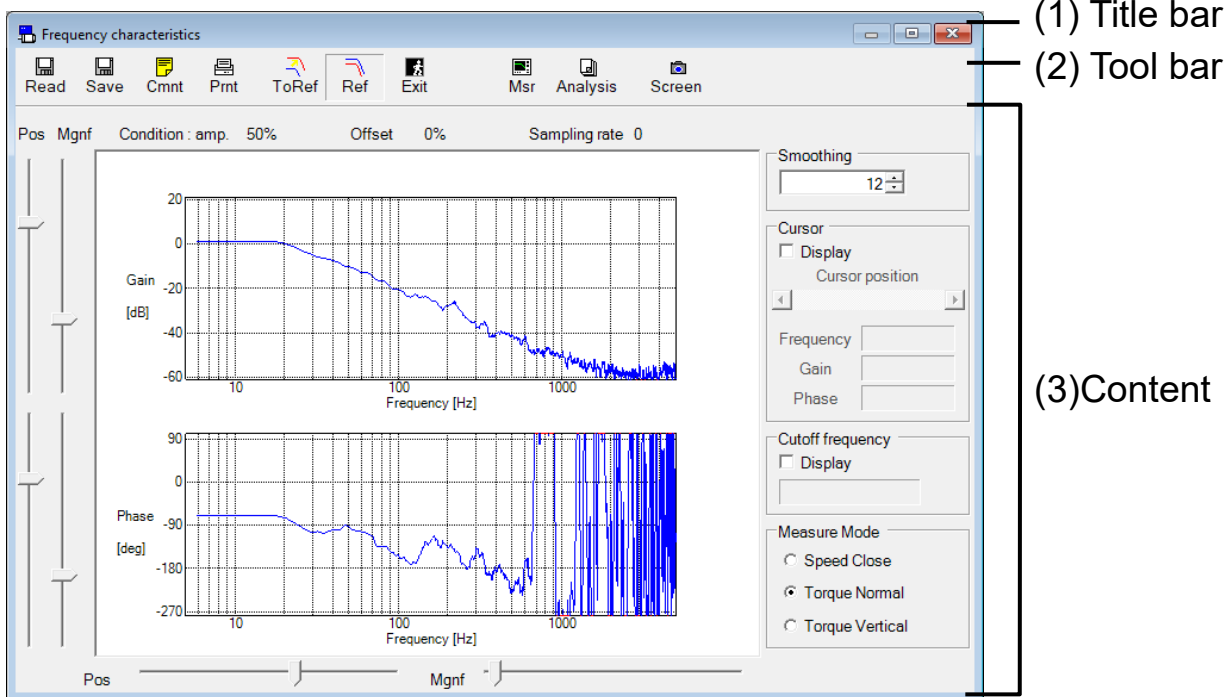

- 1 Start "PANATERM".
(Please refer to Article 5. Start up and Close down in details)
- 2 Click "Other" > "Frequency Response" of the tool bar on the main screen.
- 3 The Frequency characteristics window is opened.
(The figure of the next page)

Close the Frequency characteristics window

Click  (Exit) on the tool bar.

Structure of Frequency characteristic screen

(1) Title bar

You can operate this window.

(2) Tool bar

Operation command such as Frequency characteristics measurement is on this bar.

(Read)

Read frequency characteristics data.

When this button is effective, a file can be specified by drag and drop.

(Save)

Saves the frequency characteristics data.

(Comment)

Write comments to the Frequency characteristics file.

(Print)

Print Bode plot.

(Copy)

Copy measured wavelength to referenced wavelength.

(Reference)

Turn ON/OFF screen of reference wavelength.

(Exit)

Close Frequency characteristics window.

(Measure) Measure Frequency characteristics.

(Analysis) Analyze frequency characteristics. This cannot be used when using RS232 communication.

(Screen) Capture screen and save as file.

(3) Content area

Graph option

Configure items related to graph appearance or operation

Smoothing	Configure level of smoothing
Cursor	Switch appearance/disappear of cursor on screen. The cursor moves to the position you clicked with the mouse.
Cut off frequency	Shows frequency[Hz] which will enable Gain - 3db.
Measurement mode	Configure measurement mode.
Speed Close	Measure frequency response from Speed input to motor speed.
Torque Normal	Measure frequency response from Torque input to Motor speed.
Torque Vertical	Measure frequency response from Torque input to Motor speed. This function is used in loads that are asymmetric such as in vertical angle.

(In MINAS-A6 series, you can measurement the Position loop operation.)

Vertical axis slider

Change position, and magnification of vertical axis of bode plot.

Horizontal axis slider

Change position, and magnification of horizontal axis of bode plot.

Bode plot

Creates bode plot of measured Frequency characteristics data.

Measurement of Frequency characteristics

1 Click “Measure” on Frequency characteristics window, and then measurement window will open.

<When standard type (MINAS-A5 etc.) is connected>

Measurement

Cautions
Please check with the operation manual or the specification document.
Please execute the measurement in the condition that servo-off can be made anytime as a precaution.
This function should not be used in the case that blistering movement of a motor may break the machine.
Please execute the measurement in the condition of as low gain as possible.
Please note that large setting of offset value may cause exceeding movement limitation.
There is a case to change the some of the parameters at the FFT measurement.

Measuring condition

Amplitude r/min
Offset r/min
Sampling rate

Auto servo on

Measurement operation will start if the measurement conditions are set and <Execute>button is clicked.

Execute
Stop
Cancel

(1) Notification area

Cancel

(1) Notification area

(2) Input field for measurement condition

(3) Operation button

(2) Input field for measurement condition

2 Please confirm the content that is on the (1) notification area.

3 Specify (2) Measurement condition.

“Variation” The amplitude of noise waveform applied to the velocity command or the torque command is set when measurement of frequency characteristics.

- * When measurement mode is at “Speed Close” sum of variation, and offset will be limited to 5,000r/min. When the measurement mode is “Torque Normal” or “Torque Vertical”, it is limited to a range that does not exceed 100%.
- * When variation is increased the measurement will increase, however torque will be saturation, and torque precision will decrease. Please start with small values and increase with steps accordingly to the measurement result.

“Offset” The offset of noise waveform applied to the velocity command or the torque command is set when measurement of frequency characteristics.

- * Sum of variation and offset will be limited to 5,000r/min. When measurement mode is in Torque – Speed, then setting is not possible.
- * Motor will operate with offset being the average speed command during the measurement. Polarity of “+” is CW, and “-” is CCW. A good measurement result can be taken if the motor is rotating into one direction, while the offset is configured over the value of variation. However, please be careful when the “Rotation” is narrow, because the rotation may exceed the “Rotation”. Rotation of motor can be calculated by the below formula. Please confirm that the “Rotation” will not be exceeded before starting the measurement.

$$\text{Rotation [r]} = \text{Offset [r/min]} \times 0.017 \times (\text{Sampling rate} + 1)$$

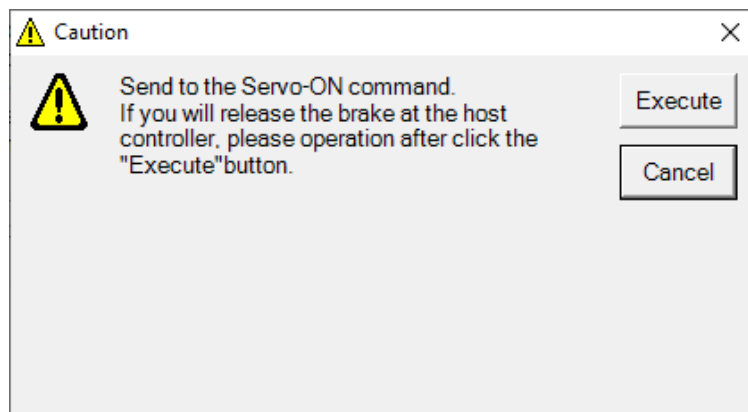

“Sampling rate” Can be configured to values from 0 to 7

- * When sampling rate is large, then the measurement precision of low frequency will increase, however the measurement time will be longer. If small, then measurement precision of high frequency will increase. Please start from “0”, and adjust accordingly to the measurement result.
- * When sampling rate is over 1, then the aliasing may occur.

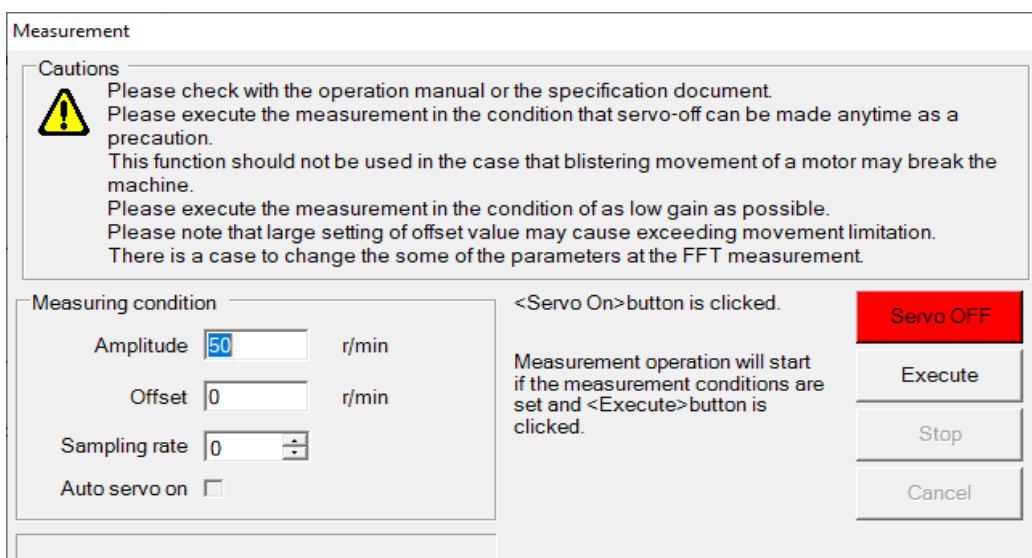

“Auto servo on” The driver does servo-on by automatic operation when measurement of frequency characteristics when “Auto servo on” is checked.

- * In the case of standard type, please do not check it when servo-on by an external input.
In the case of network type, please do not check it when brake release operation is being performed by host device.
- * In the case of standard type, if close the measurement window, clear setting.

4 When the “Servo on” of (3) operation button is invalid, or when not displayed, please move on to the next.
When the “Servo on” is valid, please click on “Servo on”. Caution windows will appear. Confirm the window message carefully, and click “Execute”. To cancel, click “Cancel”.

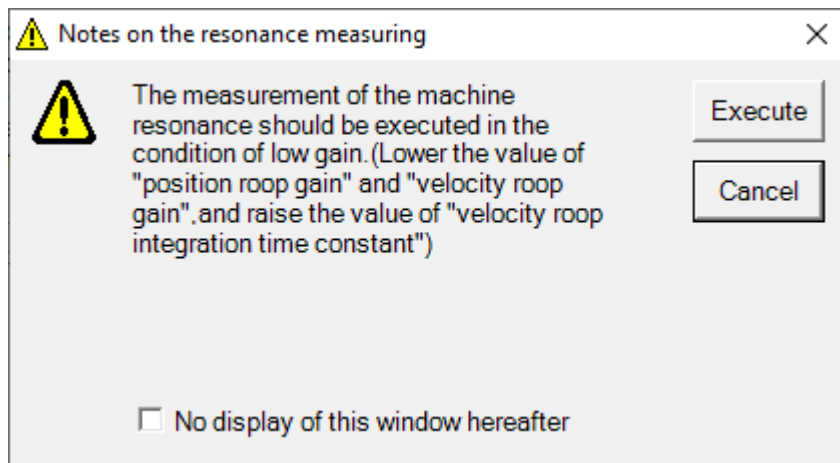

“Execute” of (3) operation button becomes effective after servo-on.

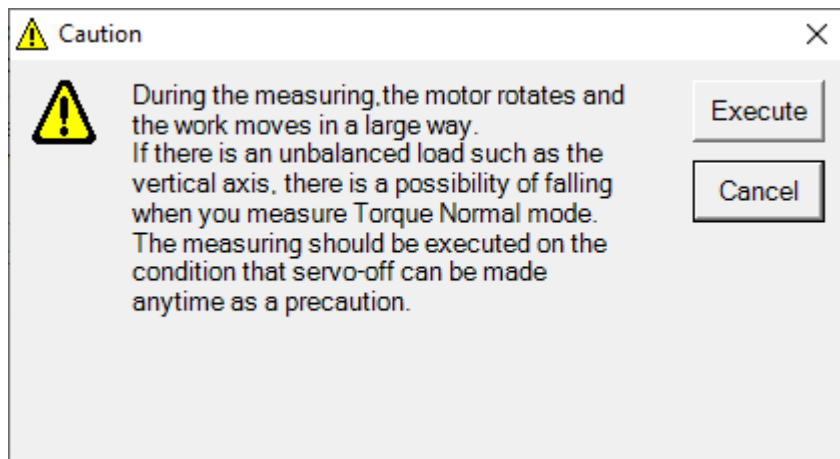

Please apply brakes by host device after servo-on.

5 Click on “Execute” on the (3) operation button, and notification window at resonance measure will appear. Confirm the window message carefully, and click “Execute”.

6 Caution windows will appear.
To turn on the servo by external input, turn on the servo.
Click “Execute” after servo-on, and the measurement will start.
To cancel, click “Cancel”.

Note) If you want to cancel while the measurement is in progress, click the “Stop” operation button in (3).

- 7 A measurement window closes automatically after the completion of measurement. Please click “Servo off”, when you do not close. Please apply brakes by host device before servo-off.

Measurement

Cancel

Measurement completed.

Analysis of frequency characteristics

1 Gain automatic adjustment window will open, when “Analysis” button of Frequency characteristics window is clicked.

- * This function cannot be used with the MINAS-A6 series.
- * Analysis can be done when communication with drive is connected, and after measurement is done at measurement mode “Torque Speed”. (Standard analysis cannot be done when communication is not connected)

The image shows a software dialog box titled "Auto Setting". It is divided into three main sections. The first section, "Option", contains a sub-section "Use Filter Number" with three radio button options: "None" (selected), "One", and "Two". The second section, "Inertia ratio", has a checked checkbox labeled "Auto" and a text input field containing the value "1.00" with the unit "[times]" to its right. The third section, "Result", is a large, empty rectangular area. At the bottom of the dialog are two buttons: "Execute" and "Cancel".

2 Configure number of notch filter that will be used at analysis option.

3 Configure Inertia ratio. If inertia ratio is to be automatically assumed from the result of frequency characteristics measurement, then put the check on the automatic adjustment checkbox.

4 After “Execute” button is clicked, recommended control parameter will appear on the analysis result, and resonance & anti - resonance frequency and it’s opposite will appear on the bode plot frequency characteristics. (Yellow : Resonance, Green : Anti - resonance)

Auto Setting

Option

Use Filter Number

None One Two

Inertia ratio

Auto [times]

Result

▶ Gain of position loop [rad/s]	17.6
Gain of velocity loop [Hz]	17.6
Velocity loop integration [ms]	56.8
Torque filter [0.01ms]	0.1
1st notch frequency [Hz]	0
2nd notch frequency [Hz]	0
Inertia ratio [%]	350

	Ant	Resonance
▶ No.1	41	56

Execute Cancel

5 Close “Cancel” to close the Gain automatic adjustment window from the frequency characteristics.

Save or reading frequency characteristics data

Measurement condition, result and parameter values at the time of measurement can be saved as file, and used again to measure with same condition, or read for reference.

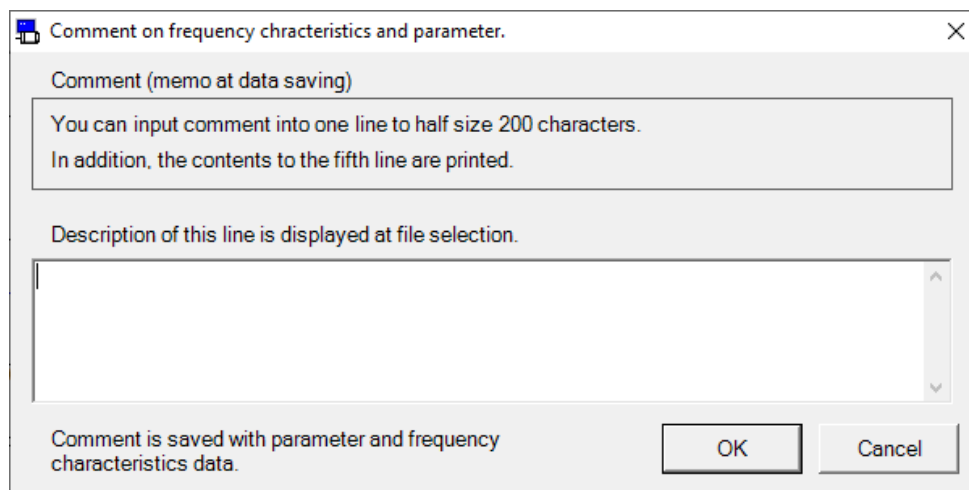

Frequency characteristics measurement result file : ***.fcd5
Frequency characteristics measurement condition file : ***.fcc5
Frequency characteristics measurement result & parameter file : ***.fcp5

Saving frequency characteristics data

- 1 Click “Save” in toolbar.
- 2 Saving frequency characteristics data window will appear.

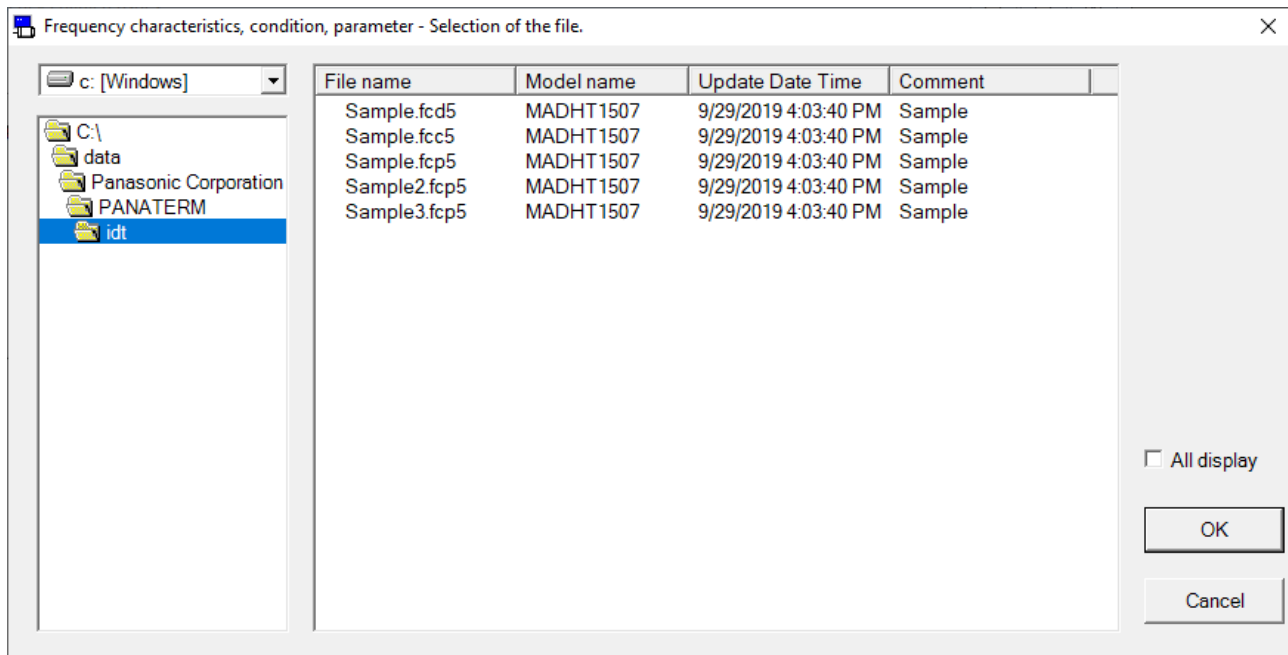

- 3 Select items to save, and click “OK”.
- 4 Comment window will appear. Below graphic shows the window when selecting “measurement condition”.

- 5 Click “OK”, and file dialogue will appear.
- 6 Input the file name to save, in this file dialogue
- 7 Click “Save”.

Reading Frequency characteristics data

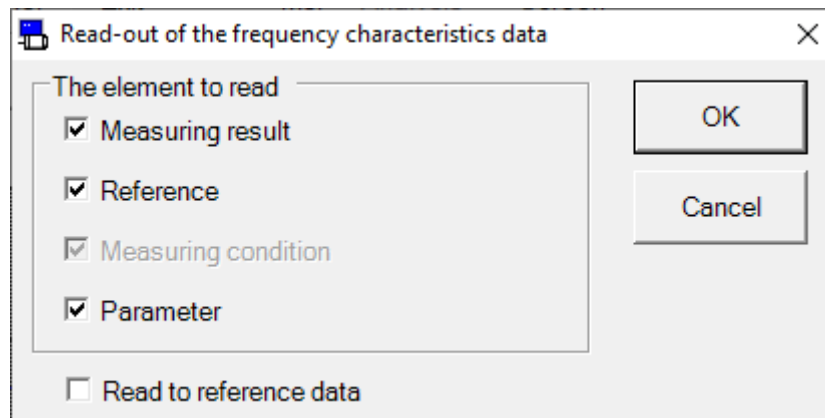

1 Click “Read” on the toolbar.

2 Select file name to read.

3 Click “OK”

4 Frequency characteristics read window will appear.

5 Select the content to read, and click “OK”

When check is put on “Read as reference data” you can read the saved measurement result as reference data. However, when the data is read as reference, the parameters will not be read. Also, data that are not once saved will not be read.

6 Content with check put on will be read.

- Notes 1) For caution please execute measurement with condition where Servo can be turned on immediately.
- Notes 2) Please measure the resonance of the machine, with the gain brought down to the minimum. (Lower the value of "position loop gain" and "velocity loop gain". And raise the value of "velocity loop integration time constant")
- Notes 3) Gain will be fixed to "1" at Frequency characteristics measurement.
- Notes 4) The frequency characteristics screen cannot open during opening some screens. For more information please refer to page 231 "Frequency characteristics screen behavior".
- Notes 5) Result of frequency characteristics measurement can vary or show a mistaken value depending on characteristics of the equipment or measuring condition. Please take the analysis result of this feature as reference of gain adjustment.

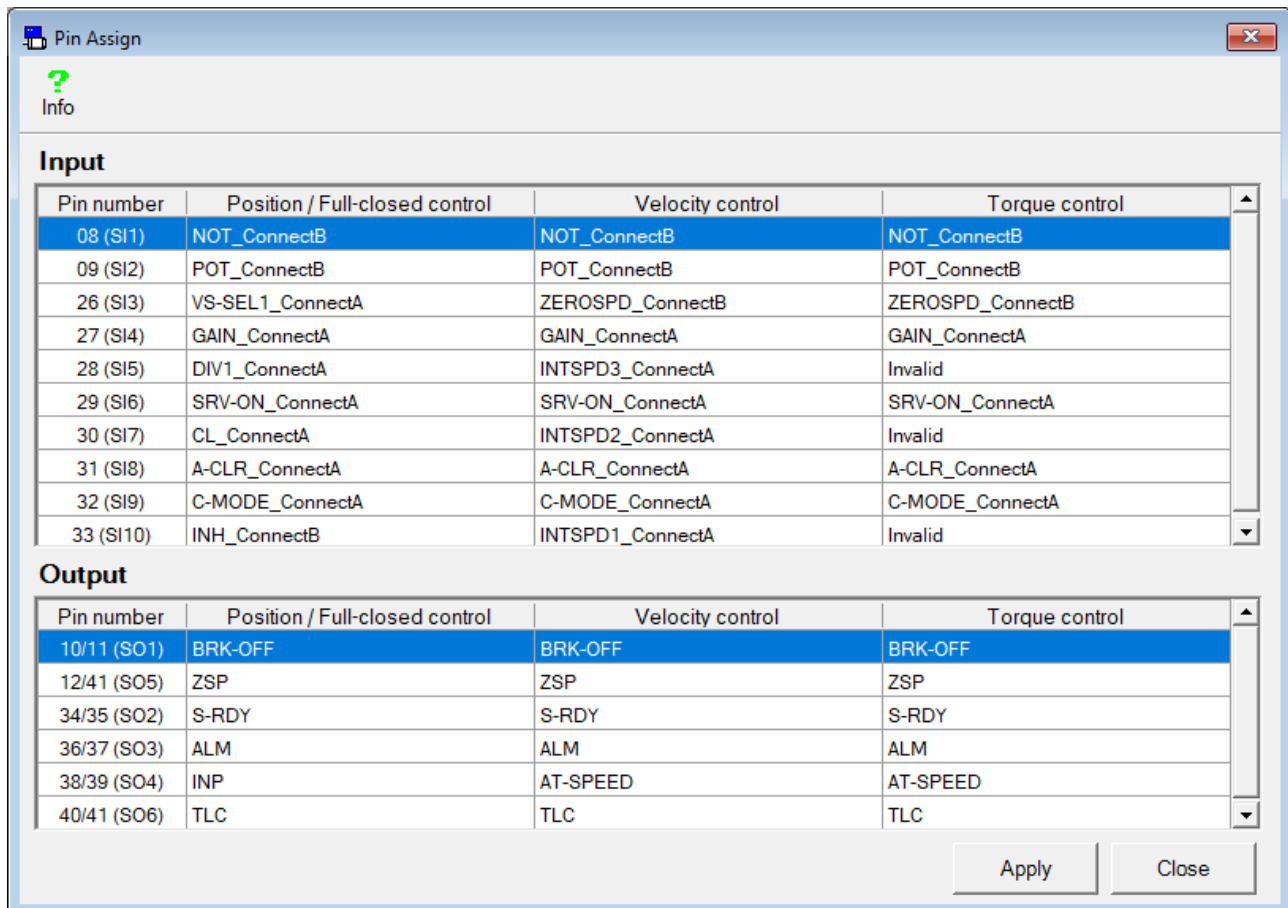

Pin assign setting screen

Assignment of input/output pin can be configured.

Open the Pin assign setting window

- 1 Start “PANATERM”.
(Please refer to Article 5. Start up and Close down in details)
- 2 Click “Other” > “Pin Assign” of the tool bar on the main screen.
- 3 When not communicating with driver, the selection screen of a parameter is displayed. Please choose the parameter file to edit.
- 4 The Pin assign setting window is opened.

<When communication with driver>

“Apply” : Sends pin assign setting to the driver.
“Close” : Close the pin assign setting window.

<When not communication with driver>

The screenshot shows a software window titled "Pin Assign - Sample1.prm5". It contains an "Info" section with a question mark icon. Below this are two tables: "Input" and "Output".

Input Table:

Pin number	Position / Full-closed control	Velocity control	Torque control
08 (SI1)	NOT_ConnectB	NOT_ConnectB	NOT_ConnectB
09 (SI2)	POT_ConnectB	POT_ConnectB	POT_ConnectB
26 (SI3)	VS-SEL1_ConnectA	ZEROSPD_ConnectB	ZEROSPD_ConnectB
27 (SI4)	GAIN_ConnectA	GAIN_ConnectA	GAIN_ConnectA
28 (SI5)	DIV1_ConnectA	INTSPD3_ConnectA	Invalid
29 (SI6)	SRV-ON_ConnectA	SRV-ON_ConnectA	SRV-ON_ConnectA
30 (SI7)	CL_ConnectA	INTSPD2_ConnectA	Invalid
31 (SI8)	A-CLR_ConnectA	A-CLR_ConnectA	A-CLR_ConnectA
32 (SI9)	C-MODE_ConnectA	C-MODE_ConnectA	C-MODE_ConnectA
33 (SI10)	INH_ConnectB	INTSPD1_ConnectA	Invalid

Output Table:

Pin number	Position / Full-closed control	Velocity control	Torque control
10/11 (SO1)	BRK-OFF	BRK-OFF	BRK-OFF
12/41 (SO5)	ZSP	ZSP	ZSP
34/35 (SO2)	S-RDY	S-RDY	S-RDY
36/37 (SO3)	ALM	ALM	ALM
38/39 (SO4)	INP	AT-SPEED	AT-SPEED
40/41 (SO6)	TLC	TLC	TLC

At the bottom right of the window are "Save" and "Close" buttons.

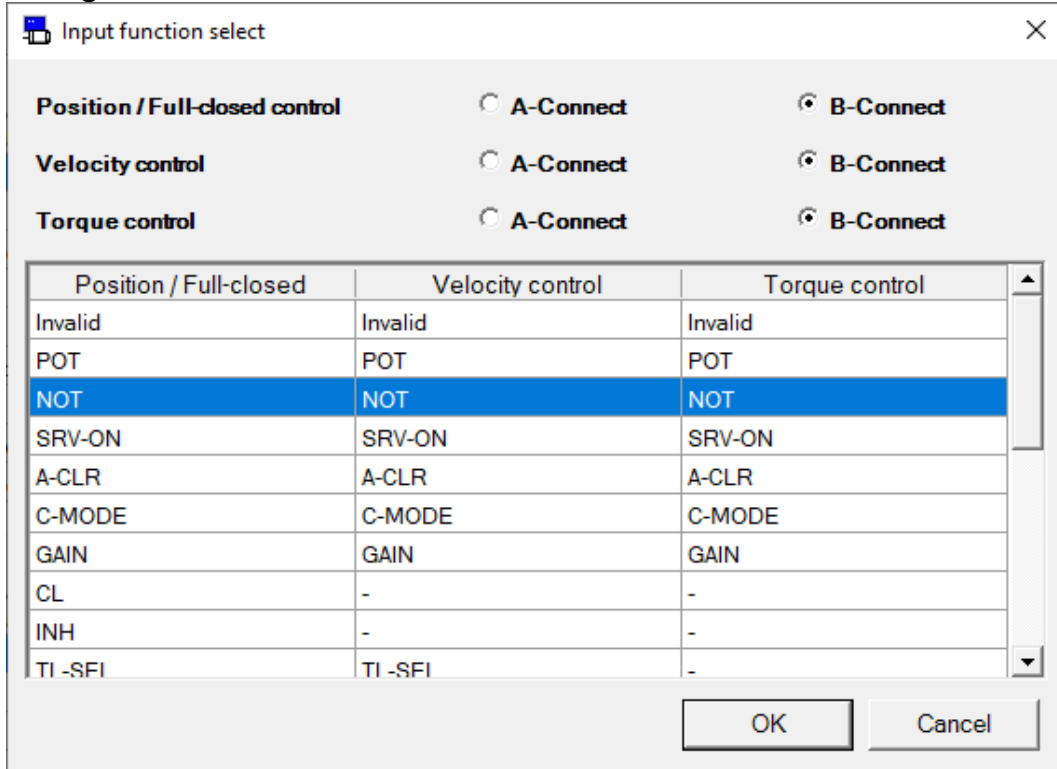

“Save” : Writes pin assign setting to the parameter files (.prm5).

“Close” : Close the pin assign setting window.

Configurations of pin assign setting

- 1 Double click the row of pin number to configure
- 2 Function select windows will appear

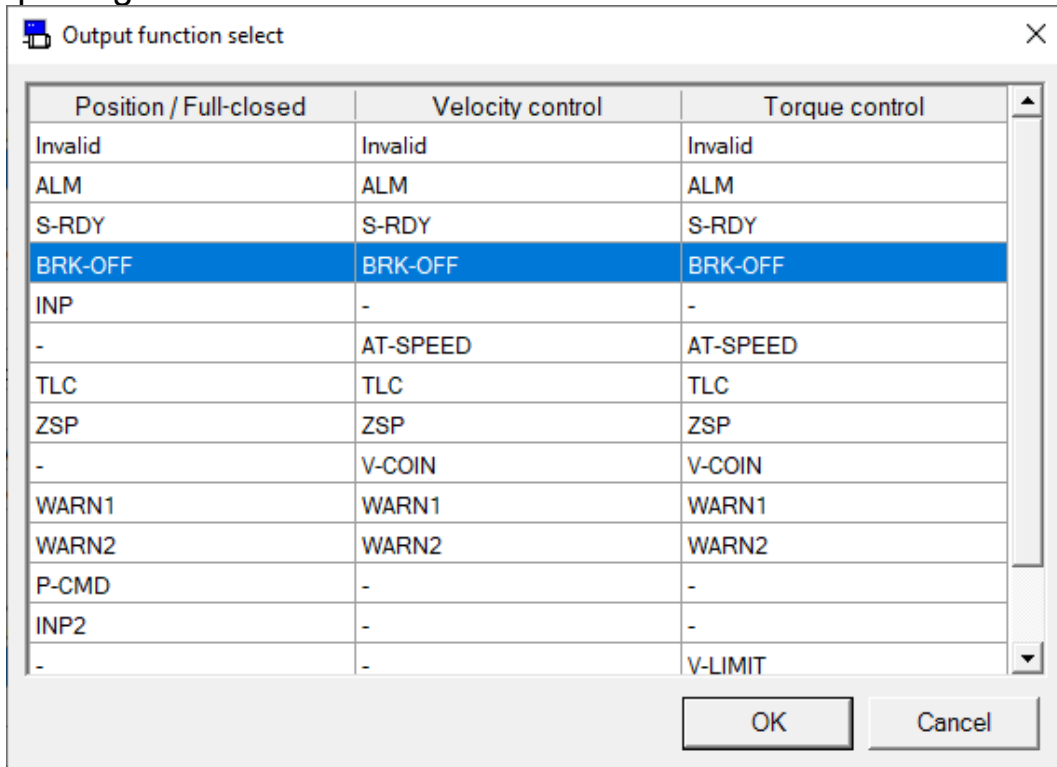

<Input Signal>

The dialog box titled "Input function select" contains three sections for control types: Position / Full-closed control, Velocity control, and Torque control. Each section has two radio button options: A-Connect and B-Connect. Below these sections is a table with three columns: Position / Full-closed, Velocity control, and Torque control. The "NOT" row is highlighted in blue. At the bottom right are "OK" and "Cancel" buttons.

Position / Full-closed	Velocity control	Torque control
Invalid	Invalid	Invalid
POT	POT	POT
NOT	NOT	NOT
SRV-ON	SRV-ON	SRV-ON
A-CLR	A-CLR	A-CLR
C-MODE	C-MODE	C-MODE
GAIN	GAIN	GAIN
CL	-	-
INH	-	-
TI -SFI	TI -SFI	-

<Output Signal>

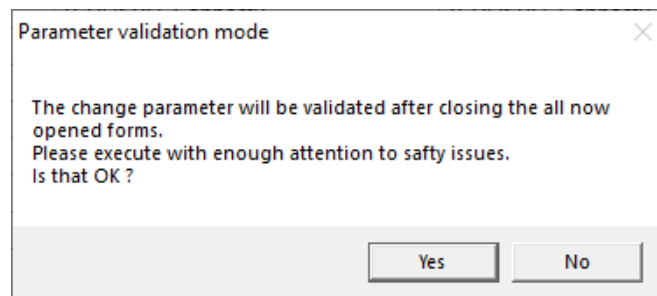

The dialog box titled "Output function select" contains a table with three columns: Position / Full-closed, Velocity control, and Torque control. The "BRK-OFF" row is highlighted in blue. At the bottom right are "OK" and "Cancel" buttons.

Position / Full-closed	Velocity control	Torque control
Invalid	Invalid	Invalid
ALM	ALM	ALM
S-RDY	S-RDY	S-RDY
BRK-OFF	BRK-OFF	BRK-OFF
INP	-	-
-	AT-SPEED	AT-SPEED
TLC	TLC	TLC
ZSP	ZSP	ZSP
-	V-COIN	V-COIN
WARN1	WARN1	WARN1
WARN2	WARN2	WARN2
P-CMD	-	-
INP2	-	-
-	-	V-LIMIT

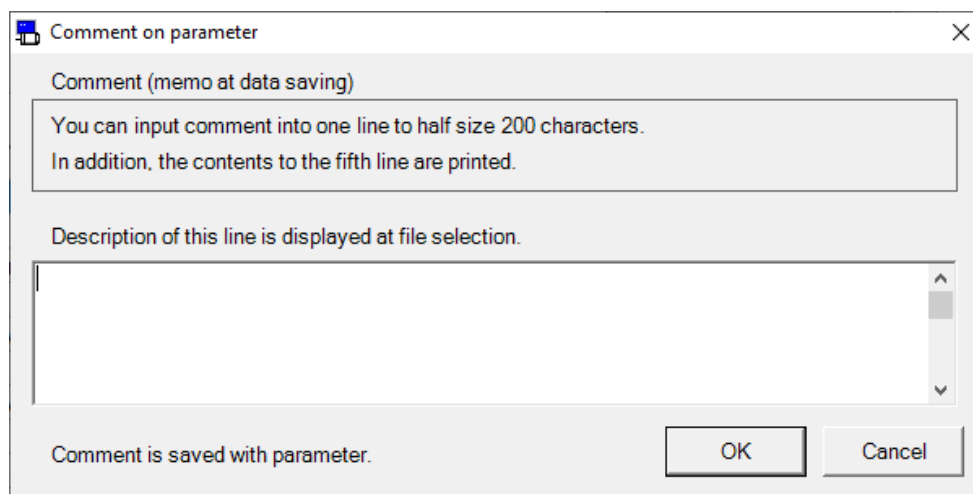

- 3 Select the assigning function to pin for each control mode, and connection method (When only input function is selected).
- 4 When “OK” is clicked at function selection window, window will go back to pin assign setting window.
- 5 When communication with driver, click on to “Apply”, and a screen to confirm prior to writing the drive will appear. Click “OK”, and parameters will be written onto the EEPROM of Drive. If “Cancel” is clicked, then the parameter will not be written on the Drive’s EEPROM.

Reboot the drive, and activate the new settings.

- 6 When not communication with driver, click on to “Save”, and a comment screen will appear.

A click of "OK" will display a file dialog. Please save to a file.

- Notes 1) The pin assign setting screen can be operated when all other windows are closed. For more information please refer to page 232 “Pin assign setting screen behavior”.
- Notes 2) Configuration of connection is needed for input signal. Please also unify a point of contact, when you assign the same signal to two or more control modes. For details of signal, please review the drive’s operation manual or technical reference.
- Notes 3) A single input signal cannot be assigned to multiple pins. Output signal can be set to multiple pins. Moreover, when you assign the same signal to two or more control modes, please assign to the same pin.
- Notes 4) New pin assign configuration will not be active unless the drive is rebooted.
- Notes 5) An error message is displayed when a setup which cannot be assigned is performed. Please change a setup according to directions of a screen. Please read the operation manual of driver or technical reference about the details of a setup which cannot be assigned.

Trouble shooting screen

Elements causing motor not to rotate or drive's lifetime can be indicated this screen.

Note) Trouble shooting cannot be performed through RS232 communication.

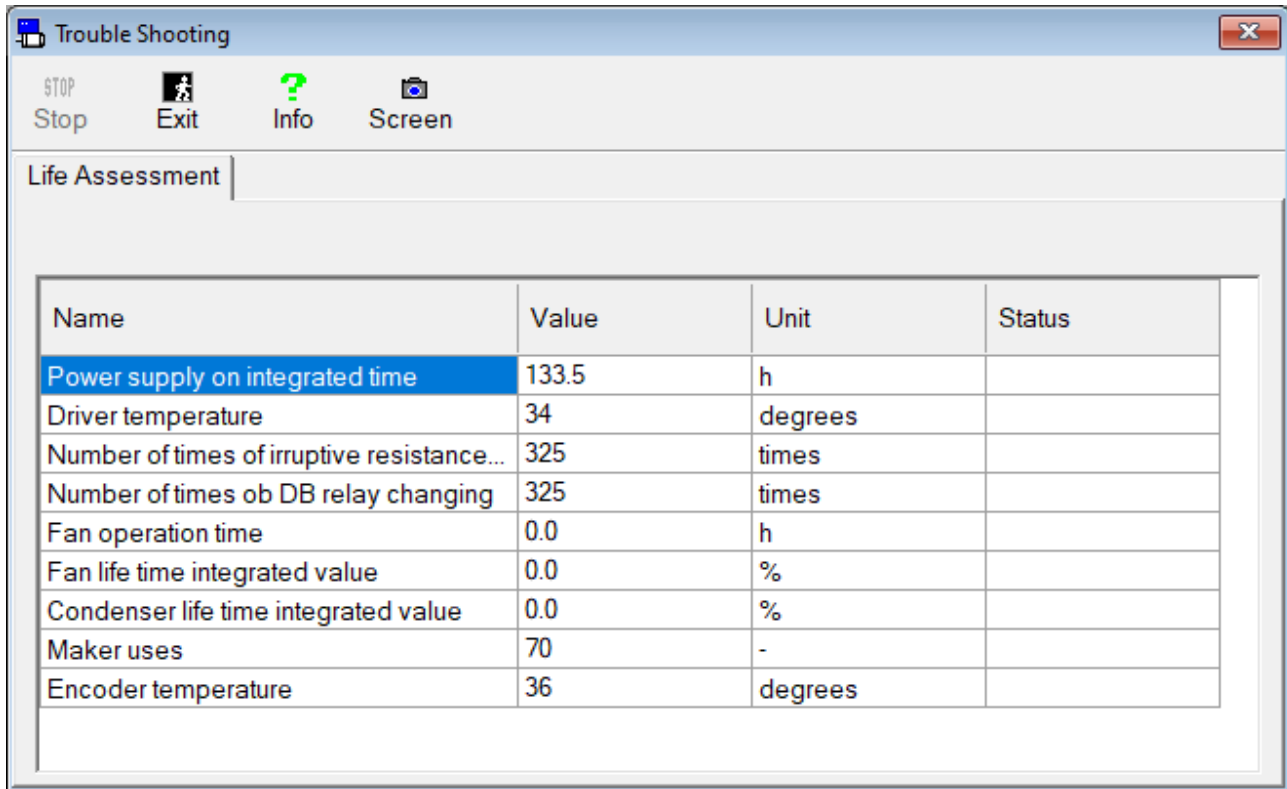

Open the Trouble shooting window

- 1 Start "PANATERM".
(Please refer to Article 5. Start up and Close down in details)
- 2 Click "Other" > "Trouble shooting" on the tool bar of the main screen.
- 3 When not communicating with driver, the selection screen of a parameter is displayed. Please select the parameter file.
- 4 The Trouble shooting window is opened.

<When communication with driver>

No.	Item	Mode	Item
2	No entry of SRV-ON input	PSTF	The Servo-ON input (SRV-ON) is not connected to COM-
7	Command pulse input frequency is low	PF	The position command per each control cycle is 1 pulse or smaller due to, *No correct entry of command pulse *No correct connection to the input selected with Pr0.05. *No matching to input status selected with Pr0.06 pr Pr0.07.

<When not communication with driver>

The screenshot shows a software window titled "Trouble Shooting" with a standard Windows-style title bar. Below the title bar is a toolbar with four icons: a red "STOP" button, a person icon labeled "Exit", a green question mark icon labeled "Info", and a camera icon labeled "Screen". The main content area is titled "Life Assessment" and contains a table with the following data:

Name	Value	Unit	Status
Power supply on integrated time	133.5	h	
Driver temperature	34	degrees	
Number of times of irruptive resistance...	325	times	
Number of times ob DB relay changing	325	times	
Fan operation time	0.0	h	
Fan life time integrated value	0.0	%	
Condenser life time integrated value	0.0	%	
Maker uses	70	-	
Encoder temperature	36	degrees	

Close the Trouble shooting window

Click  (Exit) on the tool bar.

Structure of trouble shooting window

Turn error cause display

This is displayed when communication with driver only.

(1) Title bar
(2) Tool bar
(3) Tab
(4) Content area

No.	Item	Mode	Item
2	No entry of SRV-ON input	PSTF	The Servo-ON input (SRV-ON) is not connected to COM-
7	Command pulse input frequency is low	PF	The position command per each control cycle is 1 pulse or smaller due to. *No correct entry of command pulse *No correct connection to the input selected with Pr0.05. *No matching to input status selected with Pr0.06 pr Pr0.07.

Life Assessment display

(4) Content area

Name	Value	Unit	Status
Power supply on integrated time	31.0	h	
Driver temperature	39	degrees	
Number of times of irruptive resistance...	198	times	
Number of times ob DB relay changing	198	times	
Fan operation time	0.0	h	
Fan life time integrated value	0.0	%	
Condenser life time integrated value	0.0	%	
Maker uses	9	-	
Encoder temperature	32	degrees	

Communication error

This is displayed when communication with driver only.

(4) Content area

Name	Value	Unit	Status
RTEX continues communication error1...	0	-	
RTEX continues communication error2...	0	-	
RTEX communication timeout error cu...	0	-	
RTEX cyclic data error cumulative cou...	0	-	
RTEX update counter error cumulative...	0	-	

(1) Title bar

Window operation can be done

(2) Tool bar

Stop/Restart Stop/Restart update of trouble shooting window.

Exit Close trouble shooting window.

Information The relevant page of the operating instructions for driver. (Only MINAS-A5 is supported)

Screen Capture screen and save as file.

(3) Tab

Switch to “Turn error cause”, “Life Assessment”, or “Communication error”.

(4) Content area

“Turn error cause”

Indicates element is being obstacle to rotation.

* There will be cases where “0” (No element) is indicated even with the motor rotating.

“Life Assessment”

Indicates element is lifetime evaluation.

The judged result will appear on the status as colored depending on the judged lifetime.

Green : Drive to be within standard operation.

Yellow : Drive is close to replacement

Red : Drive suggested for replacement

White : Judged level is out of configured range

* Accuracy of evaluated lifetime’s accuracy may be lowered when in application with control electricity being shutdown frequently, because the lifetime information is saved in 30 minute cycle. Drive may operate standardly even if the status is red. Please refer to this result as reference.

“Communication error”

Indicates element is RTEX communication error counter information.

* Communication error tab is displayed during communicating with network type driver (MINAS-A6NF etc.) corresponding the RTEX communication error counter monitoring function.

Notes 1) The trouble shooting screen cannot open during opening some screens. For more information please refer to page 232 “Trouble shooting screen behavior”.

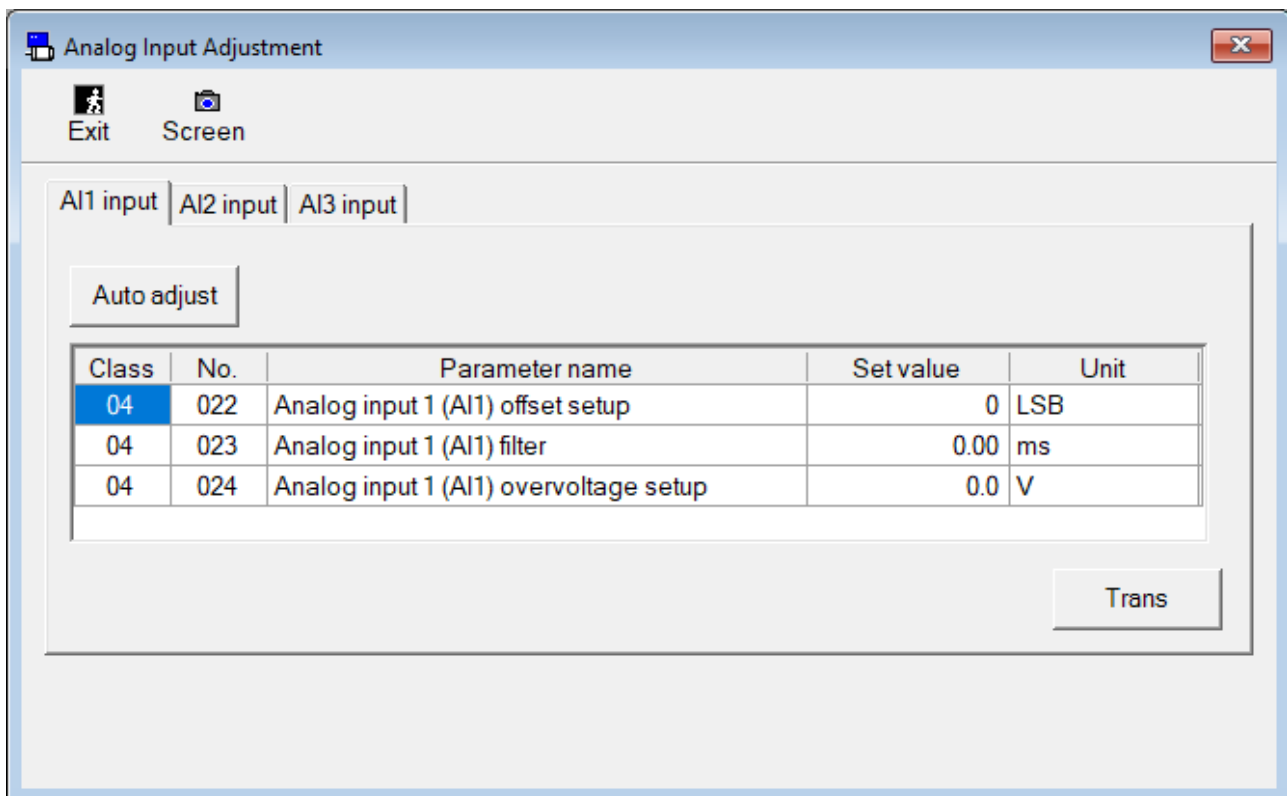

Analogue input adjustment screen

Offset of analogue input signal can be automatically adjusted.
Settings of filter or over voltage can be manually adjusted.

Note) Analogue input adjustment cannot be performed through RS232 communication.

Open the Analogue Input Adjustment window

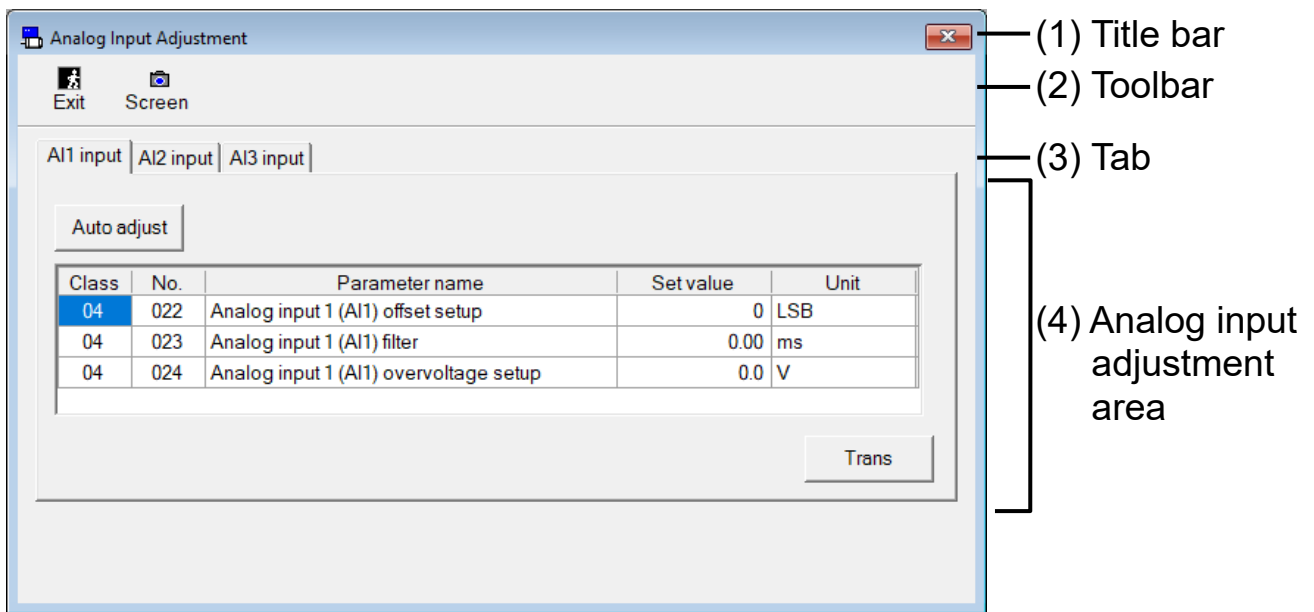

- 1 Start "PANATERM".
(Please refer to Article 5. Start up and Close down in details)
- 2 Click "Other" > "Analogue input" of the tool bar on the main screen.
- 3 The Analog Input Adjustment window is opened.

Close the Analogue Input Adjustment window

Click  (Exit) on the tool bar.

Structure of Analog input adjustment

(1) Title bar

Windows can be operated.

(2) Tool bar

Exit

Close analogue input adjustment window

Screen

Capture window, and save as file.

(3) Tab

Switch Analogue input signal

(4) Analog input adjustment area

“Automatic adjust”

Automatic measurement of offset and setting of analogue input can be done by clicking.

“Parameter”

Configured parameter will be indicated. Setting value can be directly changed.

- * Parameter change will be cancelled when tab is switched without “Trans” button is clicked being pressed.

“Trans”

Write the indicated parameter into the drive’s EEPROM.

Notes 1) The analog input adjustment screen cannot open during opening some screens. For more information please refer to page 233 “Analogue input adjustment screen behavior”.

Z phase search screen

Will turn the Servo On automatically without input, and rotate motor to reach the point where Z phase output will turn on.

Note) Please make sure that the notification and implementation area written on the drive's operation manual or technical reference before using this feature.

It is very dangerous when connecting the motor to load with Servo being ON after Z phase search, because of the drastic change of inertia ratio may occur making the motor to have resonance. Please make sure that the Servo is turned OFF. Also, have the main power turned off, or have motor wire pulled off, to disable the motor's ability to rotate, and then conduct the operation.

Z phase search cannot be performed through wireless or RS232 communication.

Open the Z phase search window

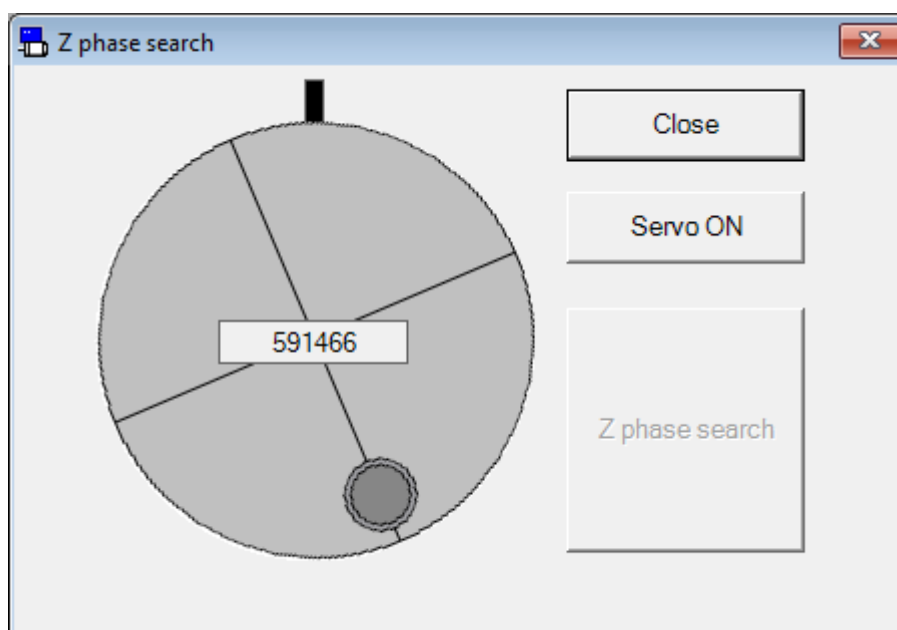

1 Start "PANATERM".

(Please refer to Article 5. Start up and Close down in details)

2 Click "Other" > "Z phase search" of the tool bar on the main screen.

3 The Z phase search window is opened.

* Z phase search window cannot be used when Trial run window is opened, front panel is used, or Servo is turned ON by input from outside. Close the trial run function and front panel is free before using the Z phase search window.

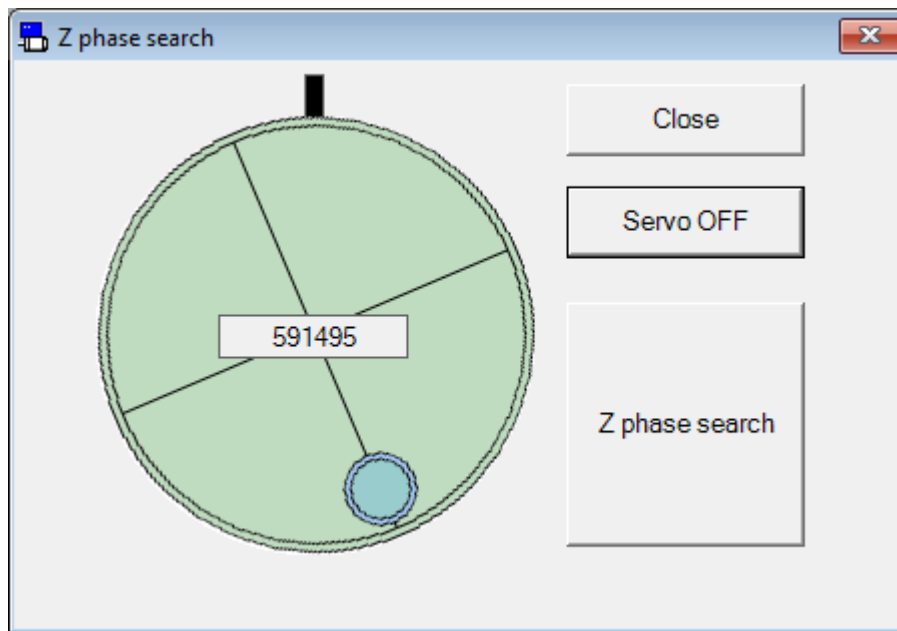

Close the Z phase search window

Click “Close” on the Z phase search window.

Procedure for Z phase search

- 1 Click “Servo ON”.
- 2 Click “Z phase search”.
- 3 Motor will rotate in CCW direction towards Z phase at 60 r/min speed.

Notes 1) For caution, please have the motor ready for power shutdown when conducting the above.

Notes 2) The Z phase search screen cannot open during opening some screens. For more information please refer to page 234 “Z phase search screen behavior”.

Notes 3) When drive is not in ready status (Alarm or Main power source is cut off), front panel is used except for monitor mode, or Servo ON is input from outside, then the Z phase search window will not be able to open or error will be on screen during execution. Please re - execute after these status is eliminated, and the Z phase search window is closed.

Setup Wizard

Please follow the instruction of the screen.
So a minimum parameter necessary for driver's operation can be set.

Note) The setup wizard cannot be performed through RS232 communication.

Open the Setup Wizard window

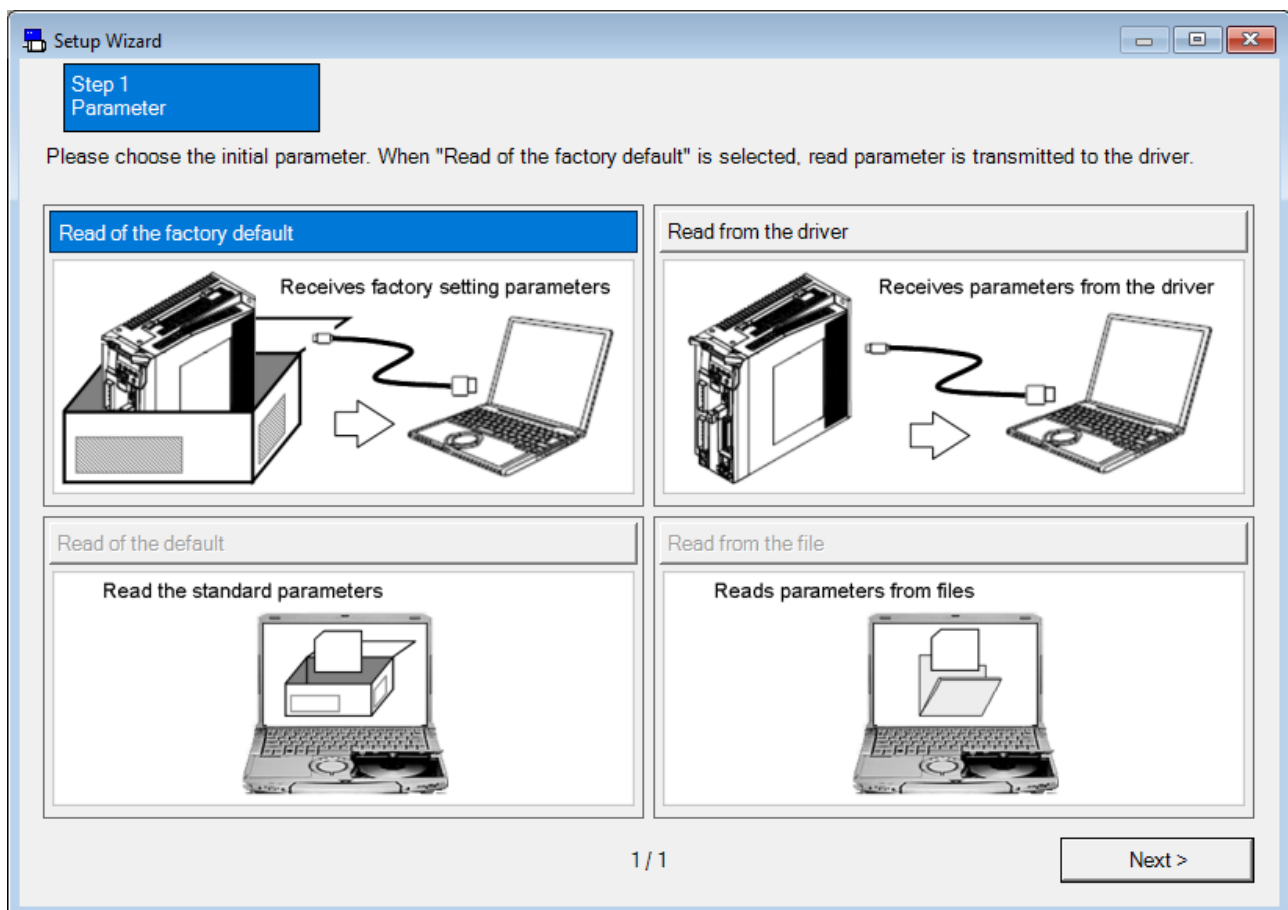

1 Start "PANATERM".

(Please refer to Article 5. Start up and Close down in details)

2 Click "Other" > "Setup Wizard" of the toolbar on the main screen.

3 The Setup Wizard window is opened.

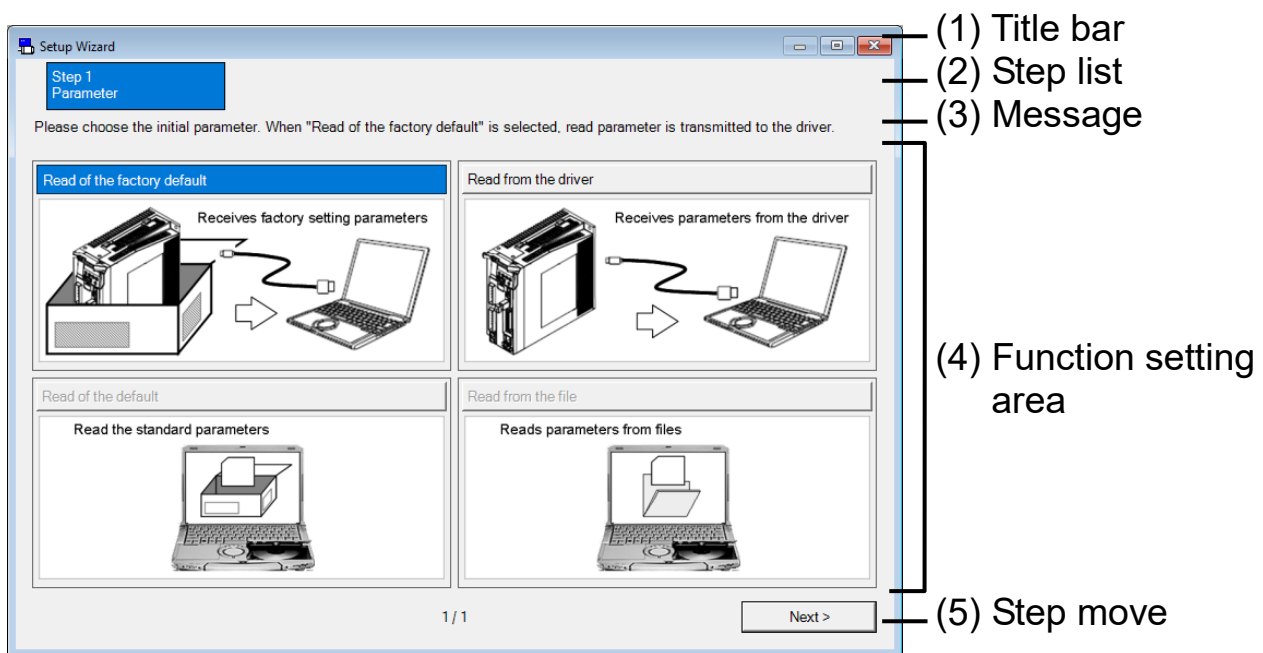

* The Setup Wizard window cannot be used when Servo is turned ON by input from outside.

Close Setup Wizard window

Click  of upright on the window.

Structure of Setup Wizard Screen

(1) Title bar

The origins of reference of parameters reference are displayed. Present control mode is displayed when communication with the driver.

And you can operate Window.

(2) Step list

The position seen from the whole of a present step is displayed.

(3) Message

An easy explanation of the content set in a present step is displayed.

(4) Function setting area

Each function is set.

(5) Step move

Switch to present step.

- | | |
|-------------|---|
| “Back” | The previous step is displayed. |
| “Next” | The next step is displayed. |
| “Interrupt” | Drive reset is interrupted, and close the setup wizard. |
| “Finish” | Close the setup wizard. |

Setting method of Setup Wizard

1 Select the origins of reference of parameters, and click “Next” button.

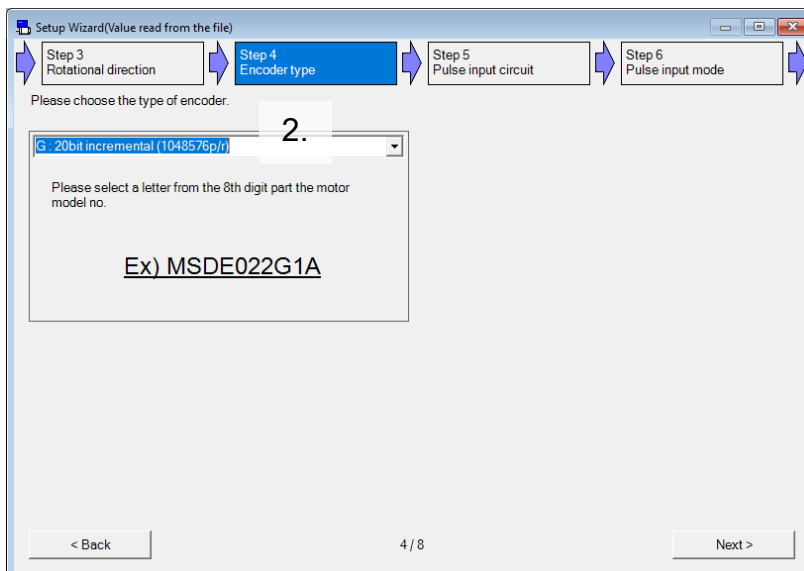

- * When read from the default setting, the setting result is cleared.
When start from present parameter, please select “Read from the driver” or “Read from the file”.

2 You set the functions according to usage. And please click “Next” button.

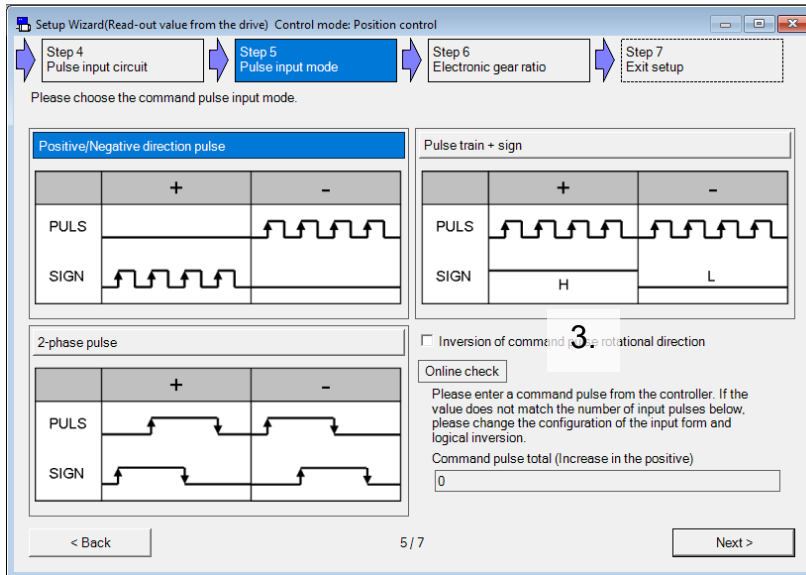

The setting method has the following pattern.

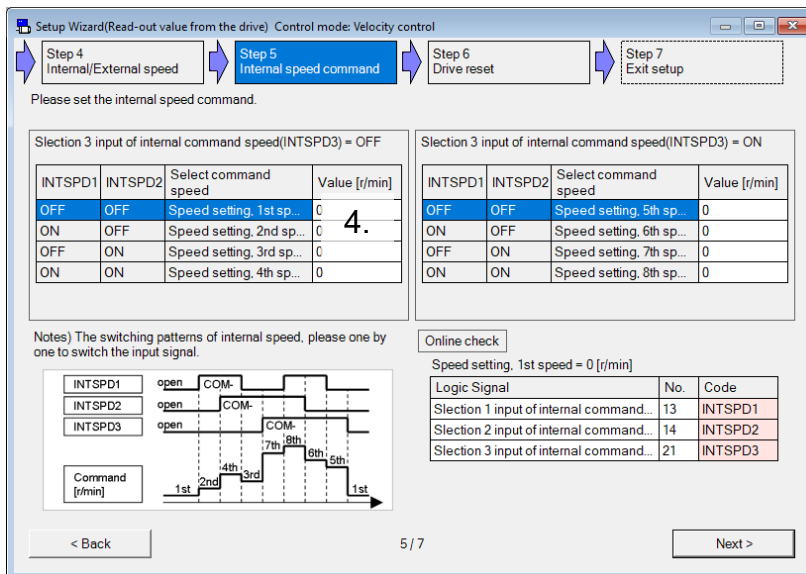

1. Select 2 – 4 panel:
You can select a radio button or image click.

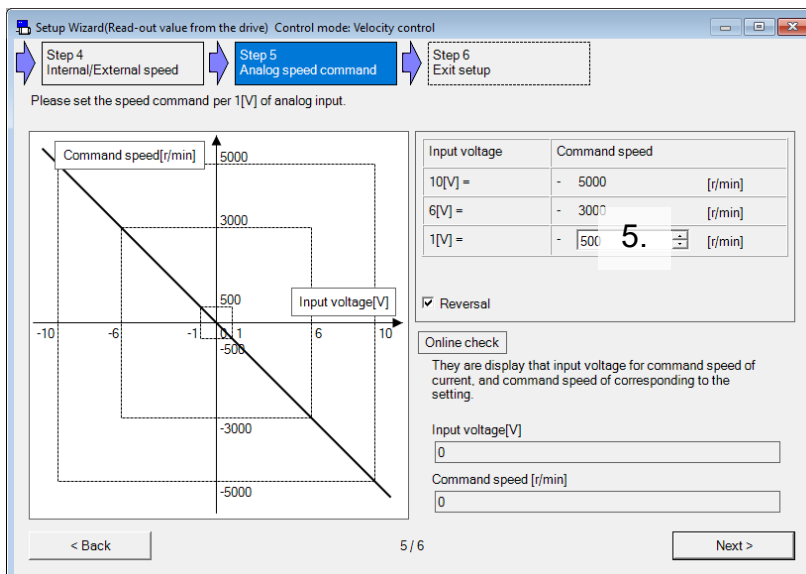

2. Combo box:
You can choose only one of the items.

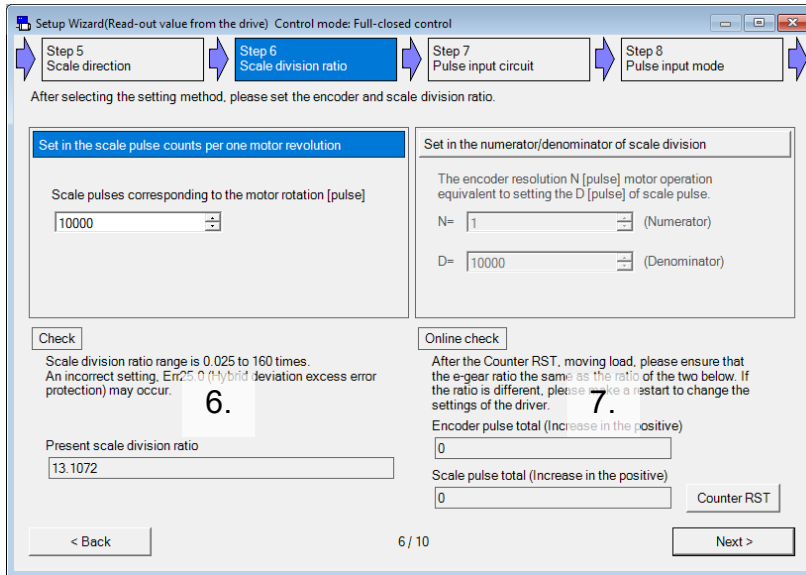

3. Check box:
You can switch the setting to check it.

4. Input value (cell):
Please move to the next cell after input. The setting will be saved.

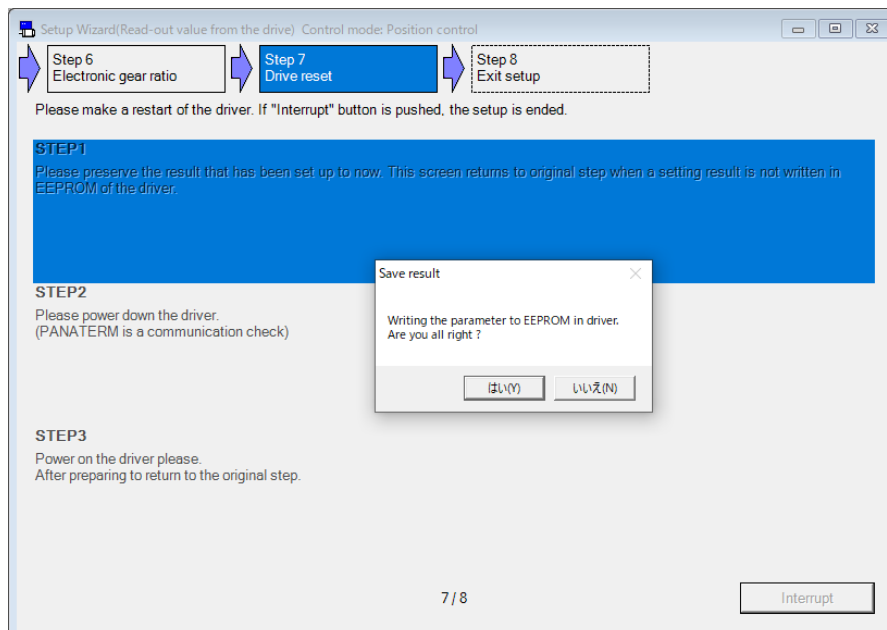

5. Input value (single):
For keyboard input, please press [Enter] key to determine the setting value. If in the "Select 2-4 panel", please enter after selecting the panel.

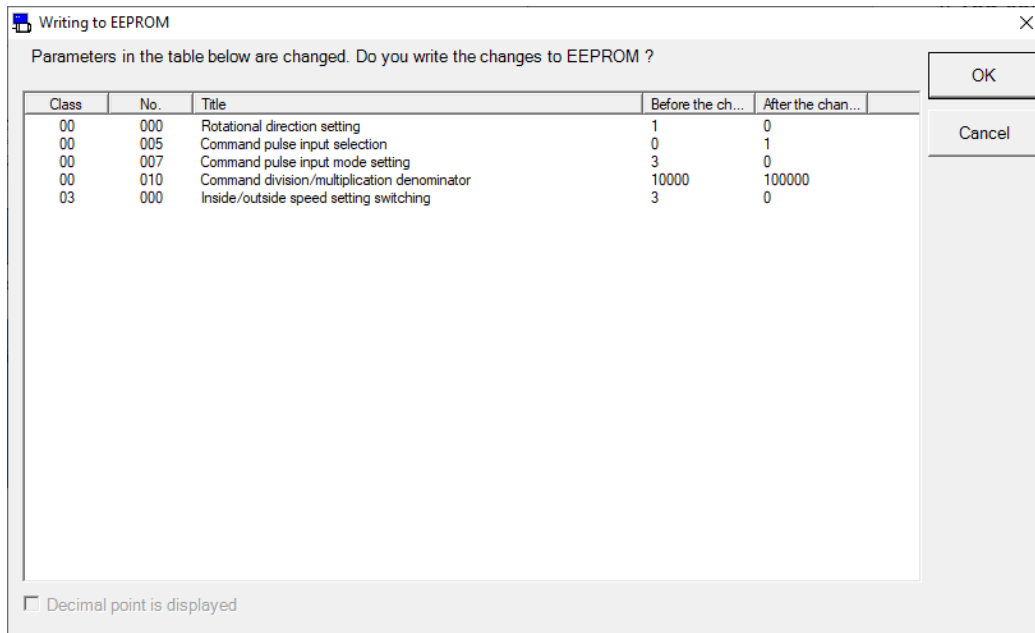

6. Check:
This is the check item of setting contents. Please reference configuration.

7. Online check:
This is the check item of setting contents. This is displayed when communication with the driver. Please reference configuration.

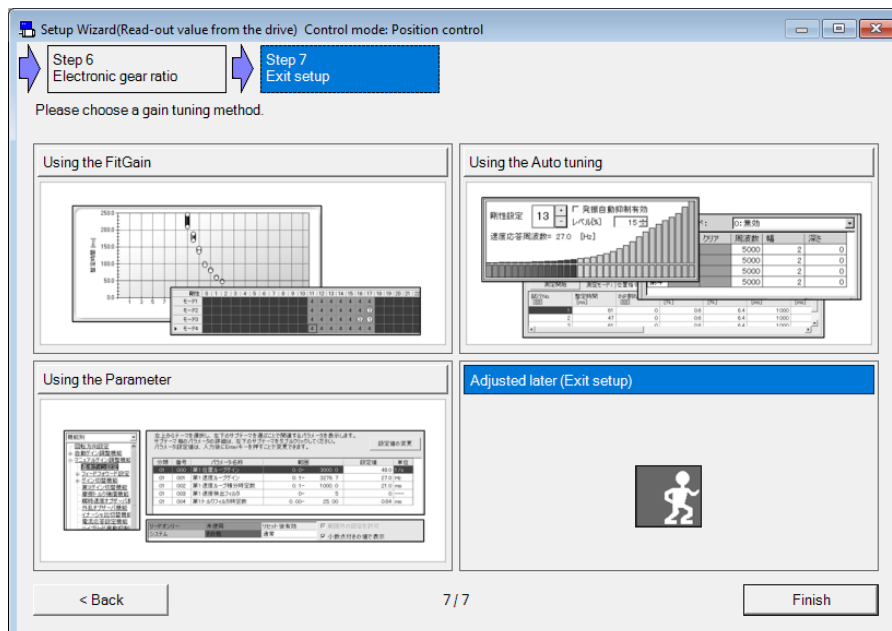

- * Step of the setup wizard displays the results change depending on the previous setting steps.
- * When you change a parameter is valid after, may be inserted “Drive reset” into the step list. Please follow the instructions on the screen.

- 3 Please save your settings before you exit the setup.
 If you do not communicate with the driver writes to a parameter file. (The extension is “.prm5”).
 If you communicate with the driver writes to EEPROM in the driver.

- 4 Please select a gain tuning method and click “Finish” button.

- 5 Setup wizard screen is closed, according to the result of the selection screen is displayed.

Notes 1) Your first step “Read from the driver” or “Read from the file” if you select, you may not work according to the configured of the wizard by the other parameters.

(Example)

- Selection input of internal command speed was changed to a different function by the pin assign setting
- Electronic gear switching function is valid and 1st numerator of electronic gear
- Etc.

Notes 2) The changes in the setup wizard will be reflected in the parameters at any time. To return to the state before starting the setup wizard, the driver without writing to EEPROM in the driver please does the power reset.

Notes 3) The online check item in the function setting area is displayed when communication with the driver.

Notes 4) Parameter set on this screen is inputted into the driver. PANATERM does not maintain this value, please perform the recording it to EEPROM of driver after completion of setting.

Notes 5) The setup wizard screen cannot open during opening some screens. For more information please refer to page 234 “Setup wizard behavior”.

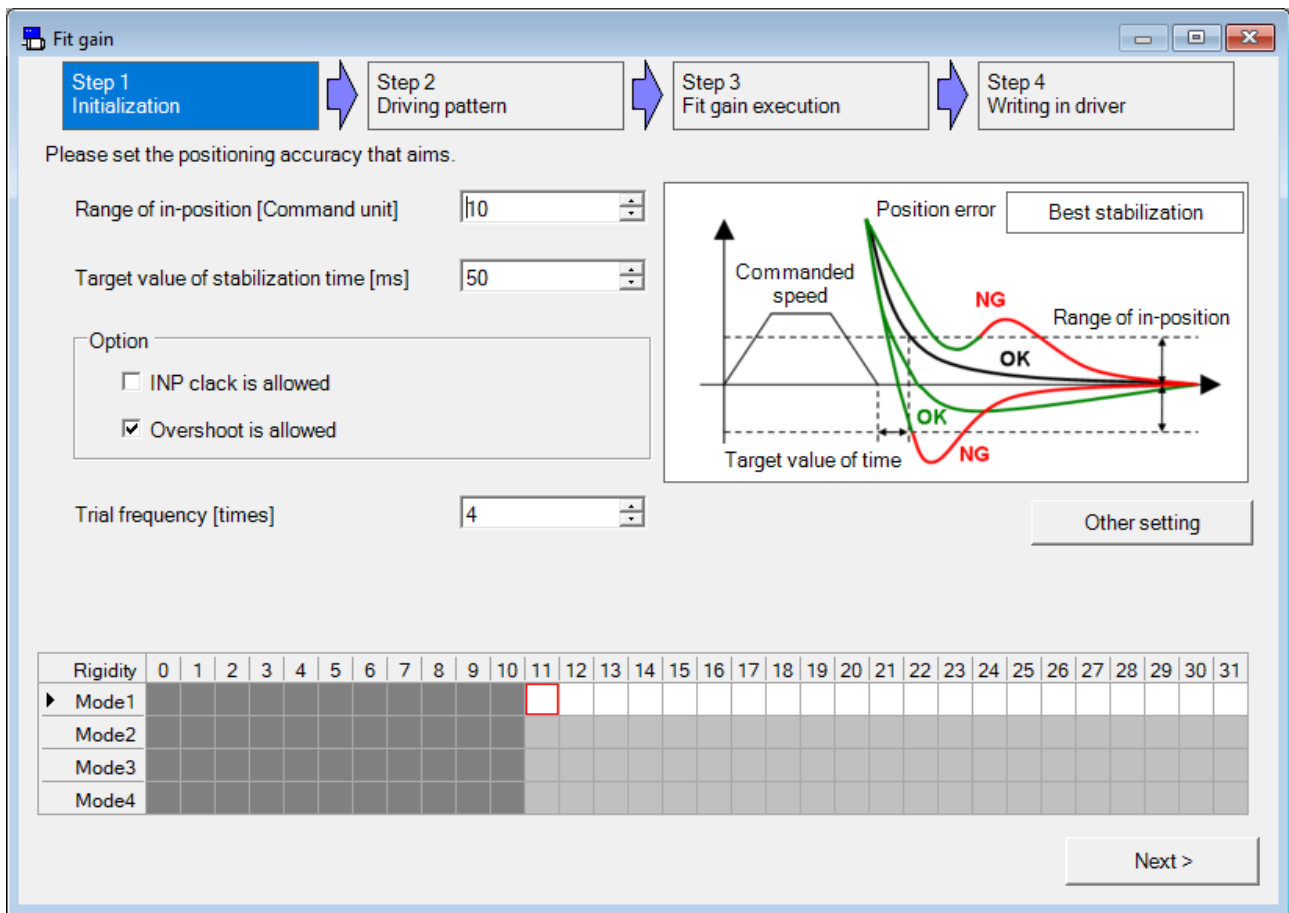

Fit gain screen (Standard)

Explore the best gain settings automatically by repeating the positioning between two points.

Note) The fit gain function is rigidity and mode at real-time auto-gain tuning may oscillate for a short time in the course of raising the load. May be suppressed by the adaptive filter and auto-oscillation detection, just in case, on ensuring the safety of the operating range, please execute in the condition that servo-off can be made anytime as a precaution. Please refer to application scope and remarks specified in the driver manual or technical reference.
The fit gain cannot be performed through wireless or RS232 communication.
In addition, the fit gain function is disabled for some special motors. For details, please contact the customer technical consultation desk.

Open the Fit gain window

- 1 Start "PANATERM".
(Please refer to Article 5. Start up and Close down in details)
- 2 Click "Fit gain" of the tool bar on the main screen.
- 3 The Fit gain window is opened. (The figure of the next page)

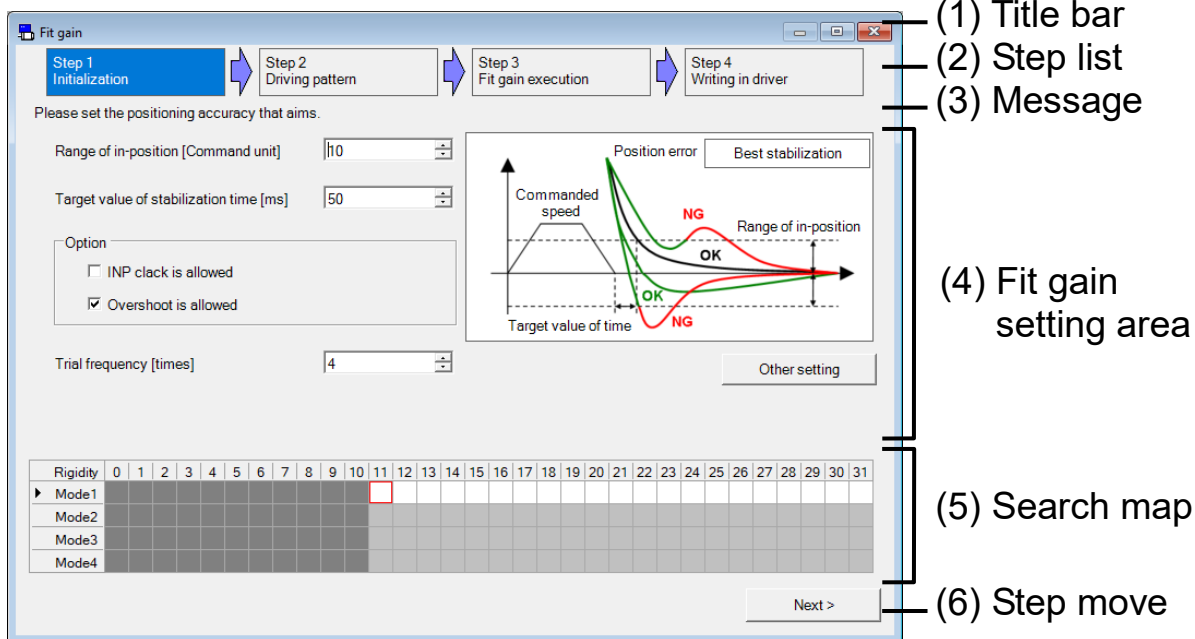

- * If the log on of fit gain window is opened, please select “Standard position control”.
- * The fit gain window cannot be used when velocity control mode and torque control mode.

Close the Fit gain window

Click  of upright on the window.

Structure of Fit gain Screen

(1) Title bar

You can operate window.

(2) Step list

The position seen from the whole of a present step is displayed.

(3) Message

An easy explanation of the content set in a present step is displayed.

(4) Fit gain setting area

You can set from step 1 to step 4.

(5) Search map

A combination of rigidity and mode is displayed.

Each cell is displayed in a number of actual trials.

In addition, background color changes the meaning.

White: Explore

Silver: Unexplored

Gray: Excluded

Lime: Completion

Red: Vibration detection

Fuchsia: Failed

(6) Step move

Switch to present step.

“Back”

The previous step is displayed.

“Next”

The next step is displayed.

“Finish”

Close the fit gain window.

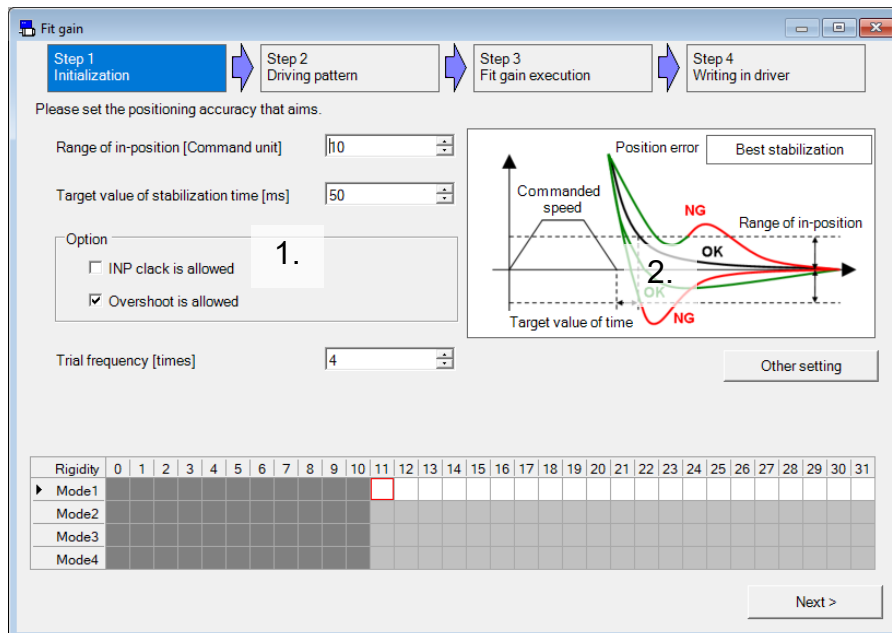

Applicable condition of fit gain

The fit gain must satisfy following conditions in order to execute.

- Real-time auto-tuning can be applied to the load and driving pattern.
(The velocity more than 100[r/min], the acceleration more than 2000[r/min/s], the time more than 50[ms], and so on. For more information please refer to the driver manual or technical reference.)
- When you move the load, easy monitor on the gain tuning screen will must be updated correctly.
(Command interval must be at least 1.5 seconds, Stabilization time can measure, and so on.)
- Adaptive filter can be applied the load and driving pattern.
(Nonlinear effect is small, the acceleration less than 30000[r/min/s], and so on. For more information please refer to the driver manual or technical reference.)
- In addition, must work correctly in a state of motor control.

Method of performance of fit gain

- 1 Please set the positioning accuracy (Range of in-position, Target value of stabilization time) that aims.

1. Setting item: Set the positioning accuracy that aims.

“Range of in-position”

Set the range of in-position.

“Target value of stabilization time”

Set the target value of stabilization time.

“Option”: Specify the conditions of auto-search.

INP clack is allowed:

Adjustment index measure data for the shorter one either of the following time. That time from start of command to next start of command or measurement time.

Overshoot is allowed:

Adjustment index measure data for measurement time.

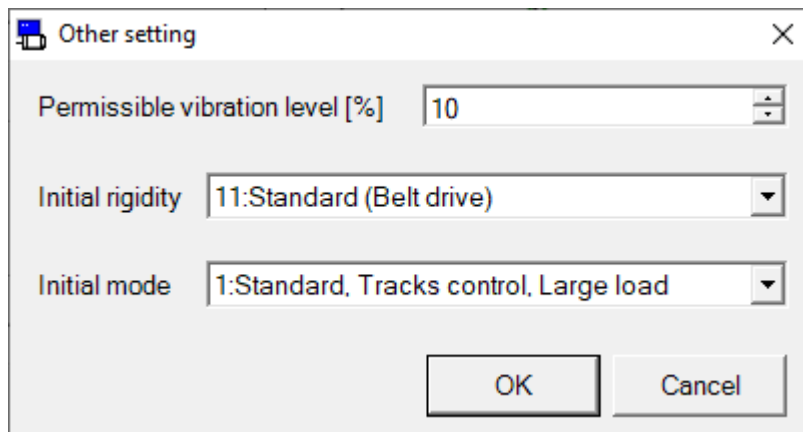

“Trial frequency”

Set the number of repeat to try for a combination of machine rigidity and mode.

2. Information figure: Switched according to “Option”.

2 If you change the permissible vibration level, initial rigidity and initial mode, click “Other setting” button and set its.

“Permissible vibration level”

Set the permissible vibration level.

“Initial rigidity”

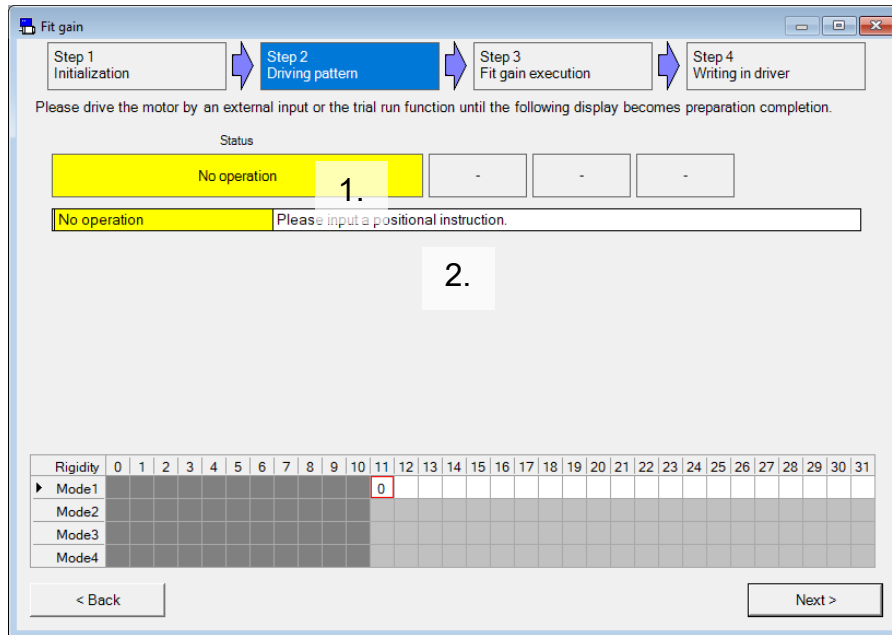

Set the real-time auto tuning rigidity of first measurement.

“Initial mode”

Set the real-time auto tuning mode of first measurement.

3 Please “Next” button click when you are finished setting, and go to Step 2.

4 Please drive the motor by an external command input or test drive function to confirm the driving pattern.

1. Status: The current status and the value associated with it are displayed.

2. Details: The current status and specific instructions to do next.

Status	Back color	Instructions
No operation	Yellow	Please input a positional instruction.
Trying	Yellow	Please repeat the operation command.
Search of initial rigidity	Yellow	Search of initial rigidity. Please repeat the operation command.
Fit gain preparation completion	Lime	Please move to the fit gain execution screen of STEP3 with a lower right button.
Stabilization time measurement failed	Fuchsia	Stabilization time measurement failed. Please do the following measures. - Please lengthen waiting time from the disbursement completion of a positional instruction to the following instruction input. - Please return to STEP1, and lower the initial stiffness below a left, present rigidity. - Please return to STEP1, and widen the range of the positioning completion.

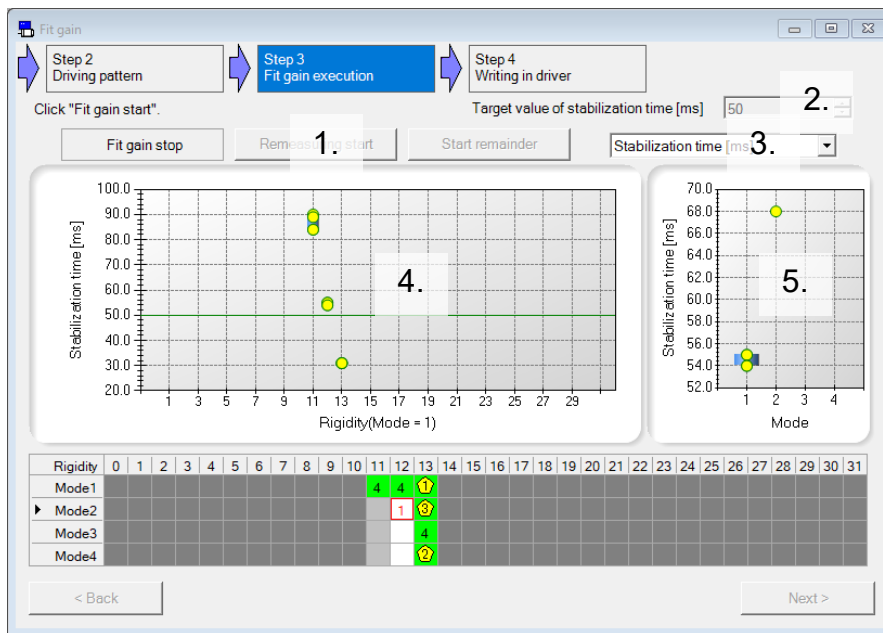

Status	Back color	Instructions
Effective load factor excessive	Fuchsia	<p>The effect load factor of one operation is 80[%] or more.</p> <p>Please lower a left, maximum load factor referring to the following measures.</p> <ul style="list-style-type: none"> - The acceleration and deceleration is made gradual. (The addition and subtraction velocity time is lengthened, and maximum speed is lowered.) - The dormant period of a positional instruction is lengthened. - The load is reduced. - The turbulence power (friction and offset load) is reduced.
Tack is short	Fuchsia	<p>In the fit gain, time (tack) from a certain instruction input to the following instruction input is more necessary than that of short 1.5[s].</p> <p>Please lengthen a left, minimum baton referring to the following measures.</p> <ul style="list-style-type: none"> - The dormant period of a positional instruction is lengthened. - The instruction time is lengthened.
Instructed time is short	Fuchsia	<p>In the fit gain, time that the instruction is continuously input (instruction time) is necessary for 0.1[s] or more.</p> <p>Please lengthen the left, minimum instruction time referring to the following measures.</p> <ul style="list-style-type: none"> - Moved distance is lengthened. - The addition and subtraction velocity time is lengthened. - Maximum speed is raised.
Instructed speed is short	Fuchsia	<p>In the fit gain, the instruction speed should be - 500[r/min] or less and 500[r/min] or more.</p> <p>Please enlarge the absolute value at a left maximum and the minimum instruction speed referring to the following measures.</p> <ul style="list-style-type: none"> - Maximum speed is raised. - Moved distance is lengthened. - The addition and subtraction velocity time is shortened.
Motor speed is short	Fuchsia	<p>In the fit gain, the motor speed should be -500[r/min] or less and be 500[r/min] or more.</p> <p>Please enlarge the absolute value at a left maximum and the minimum motor speed referring to the following measures.</p> <ul style="list-style-type: none"> - Maximum speed is raised. - Moved distance is lengthened. - The addition and subtraction velocity time is shortened. - Please return to STEP1, and lower the initial stiffness below a left, present rigidity. - Please return to STEP1, and an initial mode is assumed to be one.

Status	Back color	Instructions
Torque is saturated	Fuchsia	<p>The torque instruction is saturated. Please reduce the absolute value of the maximum and the minimum torque instruction in the left referring to the following measures.</p> <ul style="list-style-type: none"> - The acceleration and deceleration is made gradual. (The addition and subtraction velocity time is lengthened, and maximum speed is lowered.) - The load is reduced. - The turbulence power (friction and offset load) is reduced. - The torque limit switch is assumed to be invalid (the first fixation), and it enlarges it within the range where the first torque limit can be allowed with the equipment.
Real time estimation doesn't operate	Fuchsia	<p>The load estimate of the real time auto tuning should operate standardly to execute the fit gain. Please meet the real time presumption operation requirement (*1) referring to the following measures.</p> <p>*1 The motor speed continues and the acceleration and deceleration continues 100[r/min] or more and the condition of 2000[r/min/s] or more continues and 50[ms] or more continues.</p> <ul style="list-style-type: none"> - Maximum speed is raised. - The addition and subtraction velocity time is shortened securing 50[ms] or more. - Moved distance is lengthened. - Please return to STEP1, and lower the initial stiffness below a left, present rigidity.

5 Status is “Fit gain preparation completion” appears in, “Next” button click, and go to step 3.

6 Click “Fit gain start” button, please wait the measurement is completed.

- * First of all, the fit gain function is performed search operation of rigidity. The search operation of rigidity repeats the same operation of the following. Setting of rigidity repeatedly measures a specified number of “Trial frequency”. And increase the setting of rigidity one. When stabilization time satisfied targets or oscillation of the motor detected, the fit gain function transition the search operation of mode. The search operation of mode could make the measurement while changing the mode in the range of measurement rigidity.
- * The Load may oscillate in short. Just in case, on ensuring the safety of the operating range, please execute in the condition that servo-off can be made anytime as a precaution.

1. Measurement button

- “Fit gain start” : Start to measure from “Initial rigidity” and “Initial mode” configuration.
- “Remeasuring start” : Measure the rigidity and mode settings selected on the search map. This button is available after the search operation of rigidity.
- “Start remainder” : Measure the rigidity and mode combination not measured. This button is available from end of the search operation of rigidity to end of the search operation of mode.

2. Stabilization time

Displays “Target value of stabilization time” set in Step 1.

3. Select index

Select index to display the chart. Index can be selected the same content of Monitoring Item (refer to page 86) of the Gain Tuning screen.

4. Chart of index data for each setting of rigidity

In the result of the search operation of rigidity, selected index by “3. Select index” is displayed. If measurement data is not, it is not displayed.

5. Chart of index data for each setting of mode

In the result of the search operation of mode, selected index by “3. Select index” is displayed. It is not displayed until the end of the search operation of rigidity.

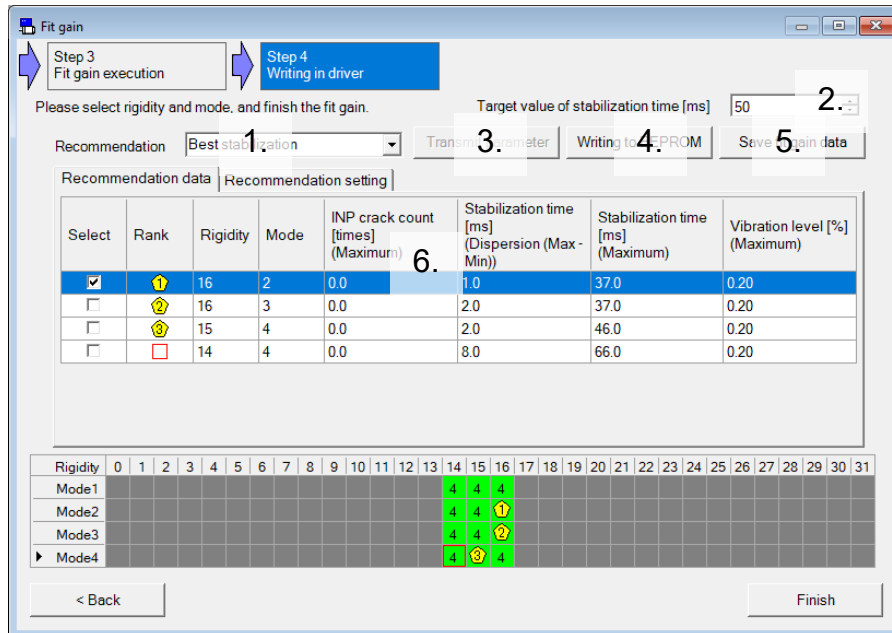

- * Click on the “Search map” after measurement, measurement results can be displayed according to the rigidity it clicked.

7 When measure is completed, measurement completed screen is displayed. Please click “OK”.

8 When measurement completed screen is closed, please “Next” button click, and go to Step 4.

9 Please select rigidity and mode combination while referring to the recommendation data.

1. Recommendation

You can refine the measurement data by rigidity and mode combination in Step 3 to the specified conditions. You can also sort it. Recommendation data tab displays the top three results.

“Best stabilization”

It find stabilization time stable configuration without INP crack.

“No overshoot”

It find stabilization time stable configuration without overshoot.

“Strong stabilization”

It find stabilization time stable configuration without INP crack and overshoot.

“Minimum stabilization”

It finds the minimum stabilization time configuration.

“Manual setting”

Use what you specify in the Recommendation setting tab.

2. Target value of stabilization time

Displays the “Target value of stabilization time” set in Step 1. It can be changed at Step 4.

3. Transmit parameter
Send to the driver to setting is checked. If the setting is sent, it will be disabled.
4. Writing to EEPROM
Write parameters to EEPROM of the driver. If you do not transmit parameter, it will be disabled.
5. Save fit gain data
Write parameters to fit gain measure result file (.fit5) to index data measured.
6. Tab
Switch to “Recommendation data” or “Recommendation setting”.

<Recommendation data>

Recommendation data		Recommendation setting					
Select	Rank	Rigidity	Mode	INP crack count [times] (Maximum)	Stabilization time [ms] (Dispersion (Max - Min))	Stabilization time [ms] (Maximum)	Vibration level [%] (Maximum)
1. <input checked="" type="checkbox"/>	2. 1	3. 16	4. 3	0.0	5. 1.0	38.0	0.20
<input type="checkbox"/>	2	16	2	0.0	1.0	38.0	0.20
<input type="checkbox"/>	8	16	4	0.0	2.0	36.0	0.20
<input type="checkbox"/>		14	4	0.0	4.0	63.0	0.20

1. Select
Please select setting to send to the driver.
2. Rank
Displays rank of recommendation data. The rigidity and mode setting selected on the search map is displayed in line 4.
3. Rigidity
Rigidity of recommendation data is displayed.
4. Mode
Mode of recommendation data is displayed.
5. Index data
Index of recommendation data is displayed. For more information please refer to Recommendation setting.

<Recommendation setting>

Recommendation data		Recommendation setting		
Index	INP crack count [time]	Stabilization time [ms]	Stabilization time [ms]	Vibration level [%]
Extraction	Maximum	Dispersion (Max - Mir)	Maximum	Maximum
Sort	-	Ascending	Ascending	Ascending
Restriction	0 Less	0 -	0 -	0 -

“Index”

Specify the target index to refine and be sort.

“Extraction”

Specify the kind of value to use to sort and refine.

You can select “Minimum”, “Maximum”, “Average”, “Dispersion (Max – Min)” and “Standard deviation”.

“Sort”

Use to determine the rank of the recommendation data.

You can select “- (Not set)”, “Ascending” and “Descending”.

In the following cases, the data on the larger rigidity and mode is given priority. It is if the same value or if you select “- (Not set)” on all.

“Restriction”

Use to refine recommendation data.

You can select “- (Not set)”, “Greater” and “Less”.

- * Maximum of stabilization time is greater than target value of stabilization time is not displayed.
- * You should select “Manual setting” in Step 4 “Recommendation” to change the recommendation setting.

10 Click “Transmit parameter” and “Writing to EEPROM”, save setting to driver.

11 Click “Finish”, the Exit of fit gain window is displayed.

- “Exit of fit gain screen”
Close the fit gain window.
- “To initialization of fit gain screen”
Start again from scratch. Current settings are cleared.

Notes 1) Please refer to application scope and remarks specified in the driver manual or technical reference.

Notes 2) Parameter set on this screen is inputted into Driver. As PANATERM does not maintain this value, please perform the recording it to EEPROM of driver after completion of adjustment.

Notes 3) Parameter settings will be needed even at the fit gain. Please read the operation manual or technical reference to understand the manual content prior to this operation.

Notes 4) The fit gain screen cannot open during opening some screens. For more information please refer to page 235 “Fit gain screen (Standard) behavior”.

Fit gain screen (2 degrees of freedom control)

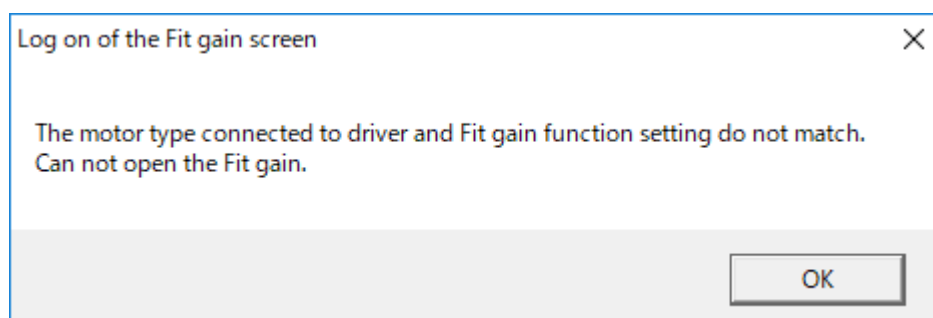

Explore the best gain settings automatically by repeating the positioning between two points. The fit gain function corresponding to 2 degree of freedom control generates a pattern of operation automatically by a test run function, and carries out full automatic adjustment of the load-characteristics and rigid setup / instruction response setup.

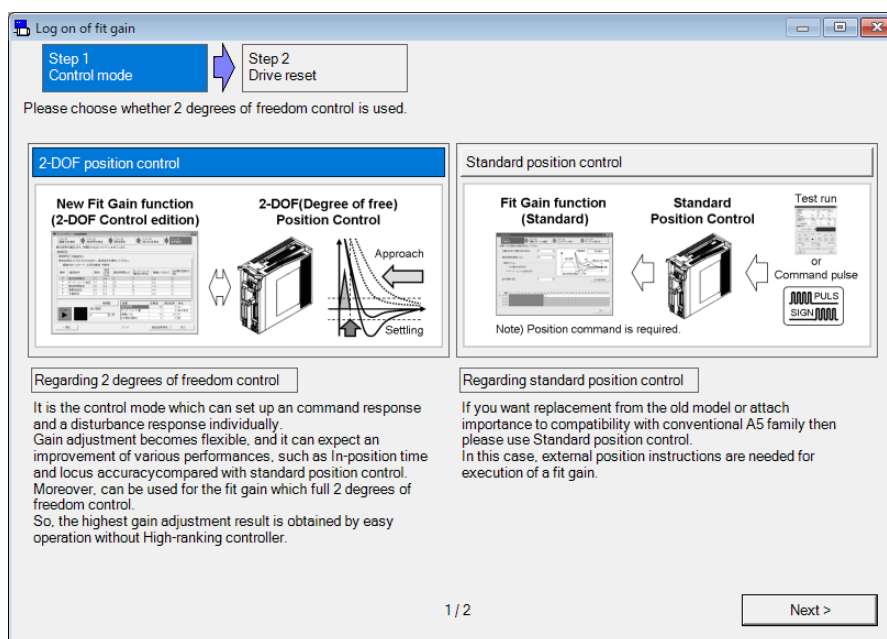

Note) The fit gain function is rigidity and mode at real-time auto-gain tuning may oscillate for a short time in the course of raising the load. May be suppressed by the adaptive filter and auto-oscillation detection, just in case, on ensuring the safety of the operating range, please execute in the condition that servo-off can be made anytime as a precaution. Please refer to application scope and remarks specified in the driver manual or technical reference.
The fit gain cannot be performed through wireless or RS232 communication.
In addition, the fit gain function is disabled for some special motors. For details, please contact the customer technical consultation desk.

Open the Fit gain window

- 1 Start "PANATERM".
(Please refer to Article 5. Start up and Close down in details)
- 2 Click "Fit gain" of the tool bar on the main screen.
- 3 The Log on of fit gain window is opened.
Please select "2-DOF position control" and "Next" button click.
(The figure of the next page)

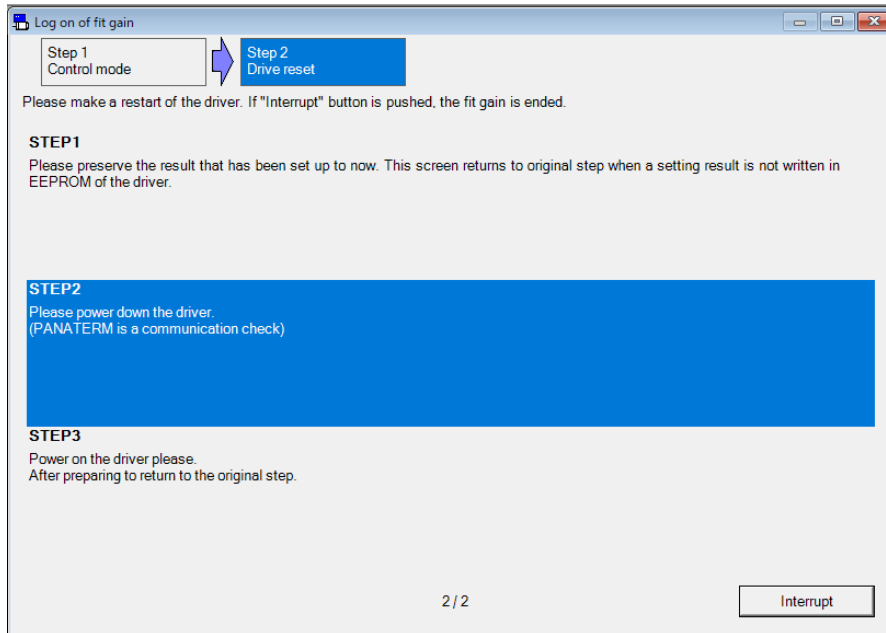

- * If the motor type connected to driver and Fit gain function setting (Standard / Linear) do not match then, the following dialog is displayed and the fit gain function cannot be executed.
In that case, please use the after changing the combination of driver and selected series is correct.

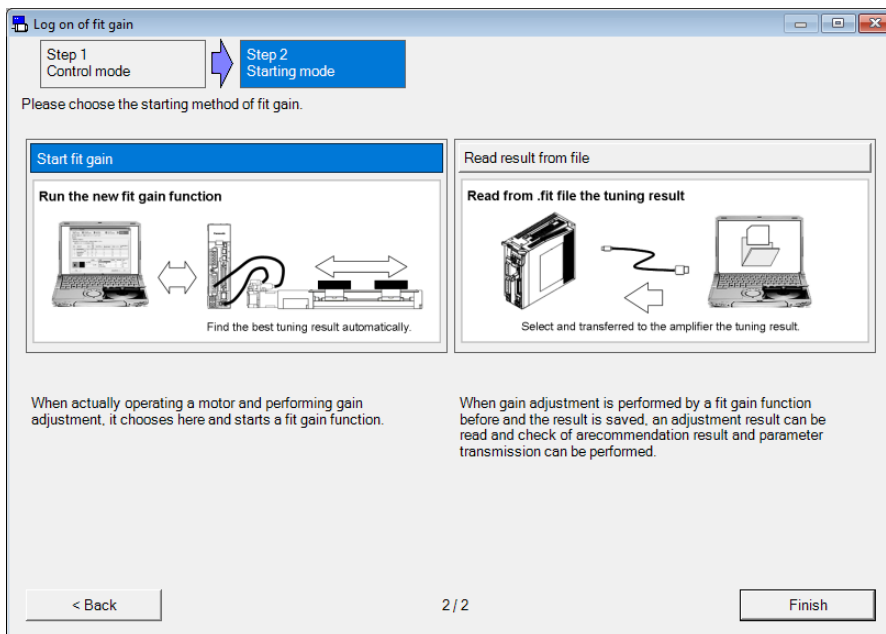

- * When you select “Standard position control”, a standard fit gain window is opened.
- * The log on of fit gain window cannot be used when velocity control mode and torque control mode. When full closed control mode, a standard fit gain window is opened. If the driver is Linear and DD Control Drive, the fit gain function cannot be used except for position control.
- * When not communicating with driver, the selection screen of the fit gain measure result file is displayed. Please select the measure result, and the fit gain data window is opened.
- * If the driver is Linear and DD Control Drive, Standard position control is not displayed. Only 2-DOF position control is displayed.

- * “Drive reset” is inserted when selection changes into “2-DOF position control” from “Standard position control”. Please follow the instructions on the screen.

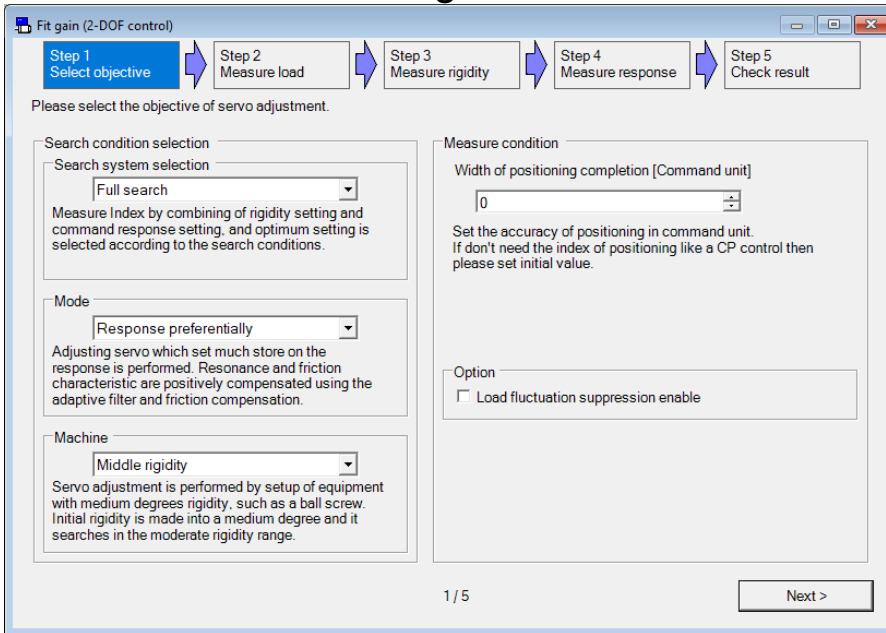

4 Please select fit gain with 2 degrees of freedom control, and “Finish” button click.

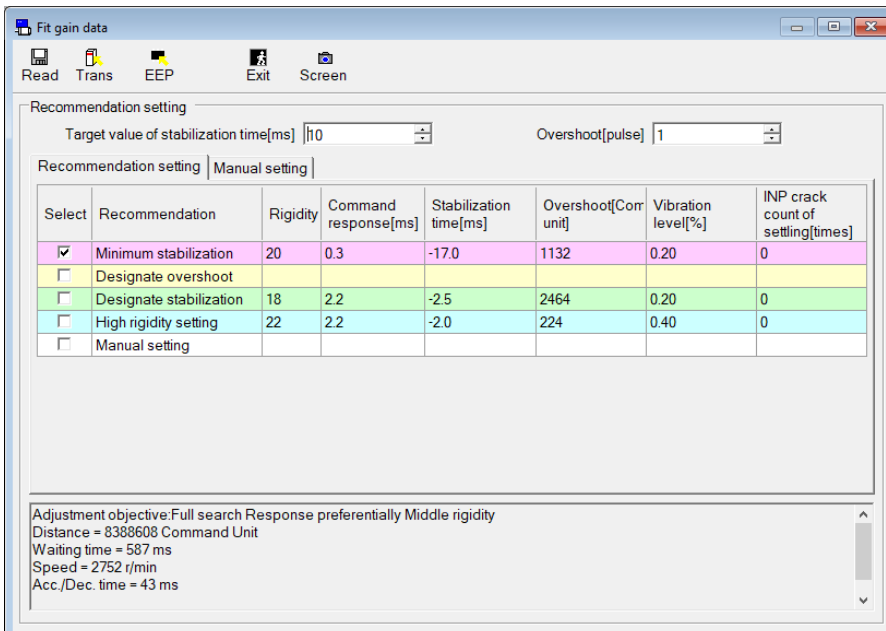

5 If you select “Start fit gain”, the fit gain (2-DOF control) window is opened.

If you select “Read result from file”, selection screen of the fit gain measure result file is displayed. Please select the measure result, and the fit gain data window is opened.

<When select “Start fit gain”>

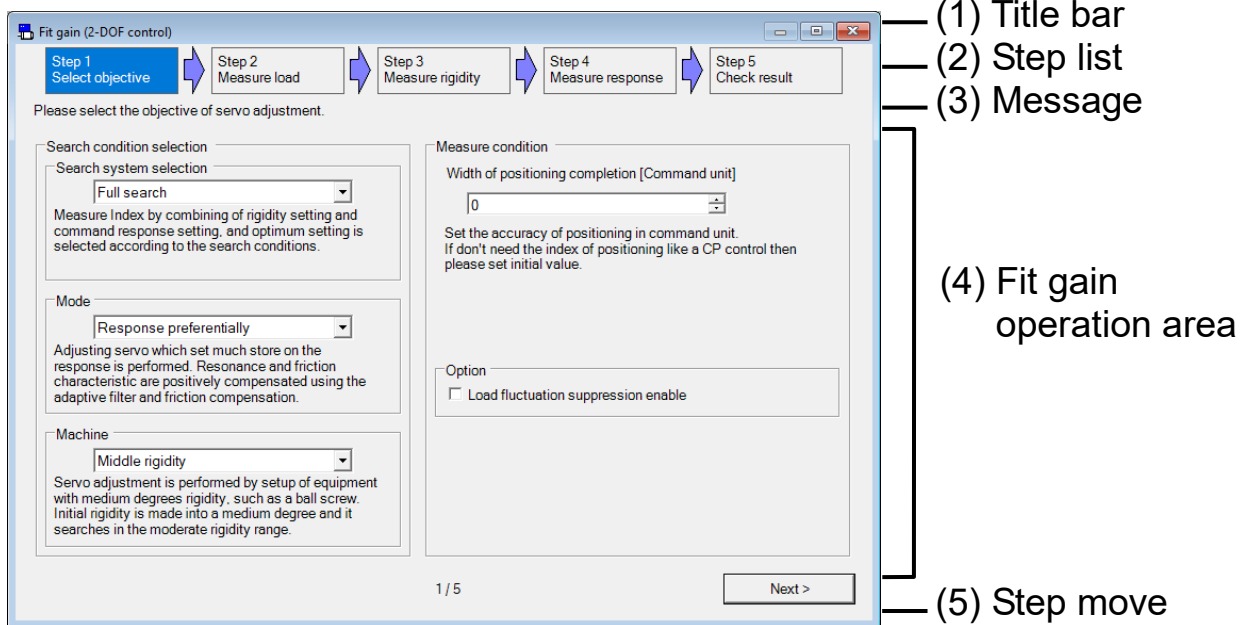

<When select “Read result from file”>

Close the Fit gain window

Click  of upright on the window.

Structure of Fit gain Screen

(1) Title bar

You can operate window.

(2) Step list

The position seen from the whole of a present step is displayed.

(3) Message

An easy explanation of the content set in a present step is displayed.

(4) Fit gain operation area

Steps 1-5 can be operated.

(5) Step move

Switch to present step.

- | | |
|----------|---------------------------------|
| “Back” | The previous step is displayed. |
| “Next” | The next step is displayed. |
| “Finish” | Close the fit gain window. |

Method of performance of fit gain

Step 1: Select objective

Select objective of servo adjustment.

1. Search system selection

Select search system.

“Full search”

Measure Index by combining of rigidity setting and command response setting, and optimum setting is selected according to the search conditions.

2. Mode

Select “Response preferentially”, “Balanced” and “Stability preferentially”.

“Response preferentially”

Adjusting servo which set much store on the response is performed. Resonance and friction characteristic are positively compensated using the adaptive filter and friction compensation.

“Balanced”

Adjusting servo which was able to balance a response and stability is performed. Using the adaptive filter, resonance characteristic is controlled positively.

“Stability preferentially”

Adjusting servo which set much store on the stability is performed. Fundamental adjustment which does not use the adaptive filter and friction compensation is performed.

3. Machine

Rigidity is selected from “High”, “Middle” and “Low”.

“High rigidity”

Servo adjustment is performed by setup of equipment with high rigidity, such as coupling direct connection. Initial rigidity is made high and adjustment which raises rigidity as much as possible is performed.

“Middle rigidity”

Servo adjustment is performed by setup of equipment with medium degrees rigidity, such as a ball screw. Initial rigidity is made into a medium degree and it searches in the moderate rigidity range.

“Low rigidity”

Servo adjustment is performed by setting of equipment with low rigidity, such as belt driving. Initial rigidity is made low and adjustment which raises rigidity as much as possible is performed.

4. Width of positioning completion

Set the accuracy of positioning in command unit.

If don't need the index of positioning like a CP control then please set initial value.

(In MINAS-A6 series, you can set the option control.)

1 Please set the objective (Search system, Mode, Machine) and width positioning completion.

2 Please “Next” button click when you are finished setting, and go to Step 2.

Step 2: Measure load

Measure the load character.

Fit gain (2-DOF control)

Step 1 Select objective → Step 2 Measure load → Step 3 Measure rigidity → Step 4 Measure response → Step 5 Check result

Measure the load character. Please click a right side start button after a working range set the left side.

Operation area setting
Movement range is set up.
Instruction pattern change of Step 4 also put restrictions on Working range specified here.
So, please specify Working range widely.

JOG Speed: 60 r/min
JOG Acc./Dec. time: 50 ms

SRV ON | SRV OFF

MAX (pulse): 0 MOTOR (pulse): 0 MIN (pulse): 0

Load characteristic measurement
Measure load is started. Please specify Direction, Movement, and Trial frequency, and push a start button.

Direction: Reciprocate (Positiv) Movement: 2 revolutions Trial frequency: 4

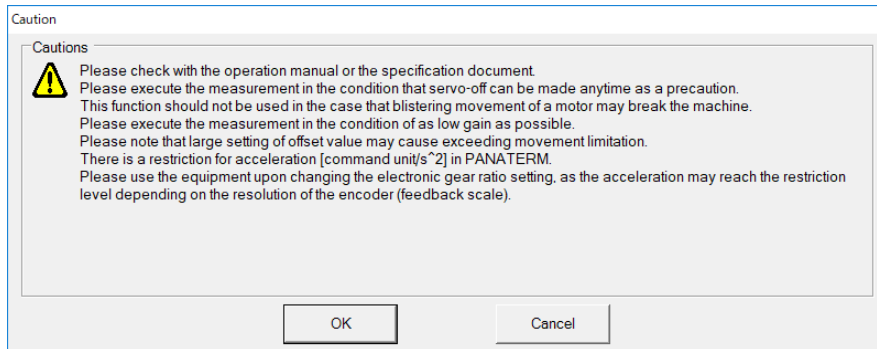

START RESET SRV OFF

Acceleration: 1000 [r/min/s]
Torque command (MAX): - [%]

Load Characteristics	Measurement	Unit
Inertia ratio		%
Estimated unbalanced load		%
Dynamic friction torque		%
Viscous friction torque		%/(10000r/n)

< Back 2 / 5 Next >

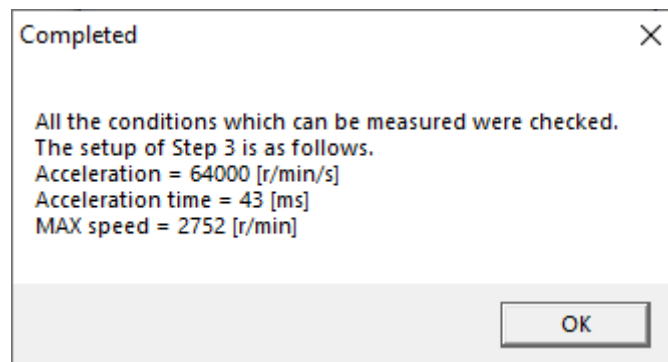

- 1 Click on “SRV ON” button, and the caution window will appear. Confirm the window message carefully, and click “OK”.

- 2 Please move load by  (Positive) and  (Negative), and set up a working range.

- 3 Please set direction, movement and trial frequency and click  button.

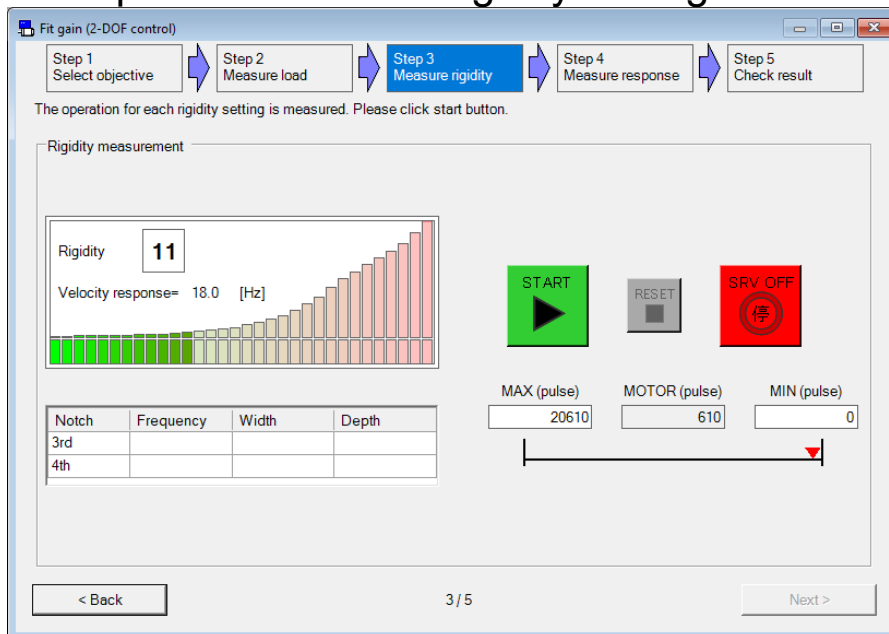

- 4 When measure is completed, measurement completed screen is displayed. Please click “OK”.

- 5 When measurement completed screen is close, please “Next” button click, and go to Step 3.

Step 3: Measure rigidity

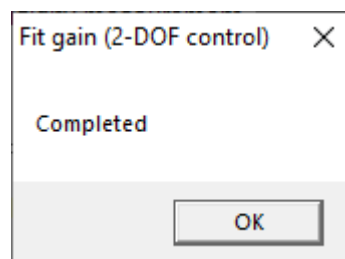

The operation for each rigidity setting is measured.

1 Click  button, please wait the measurement is completed.

- * The Load may oscillate in short. Just in case, on ensuring the safety of the operating range, please execute in the condition that servo-off can be made anytime as a precaution.

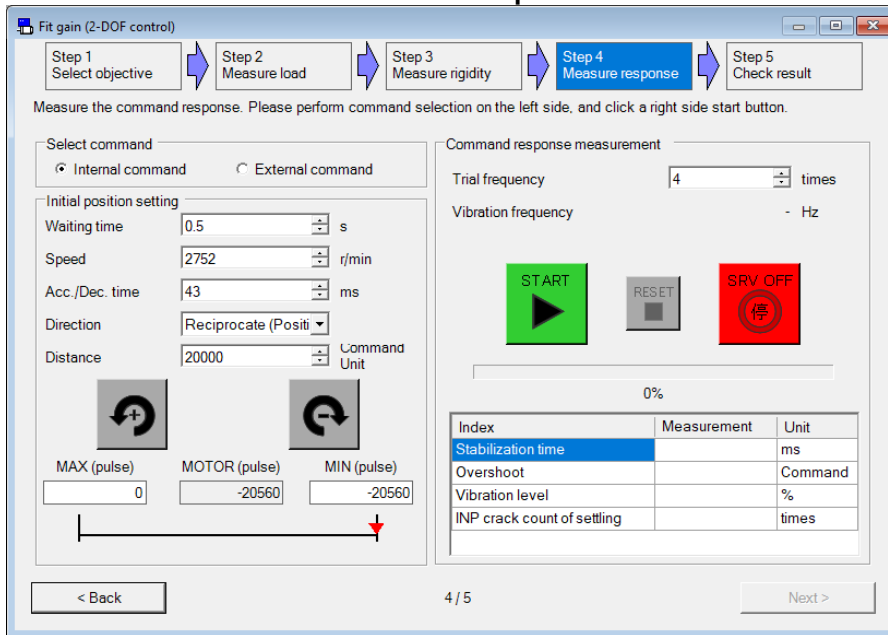

2 When measure is completed, measurement completed screen is displayed. Please click “OK”.

3 When measurement completed screen is close, please “Next” button click, and go to Step 4.

Step 4: Measure response

Measure the command response.

1 Please select internal command or external command if needed. In internal command, please set waiting time, speed, acceleration and deceleration time, direction and distance.

- * Initial setting is an operation pattern of the internal command in Step 3.
- * When external command is selected, select command cannot return to internal command. Please be careful.

2 Please click  button after setting trial frequency, and wait the measurement is completed.

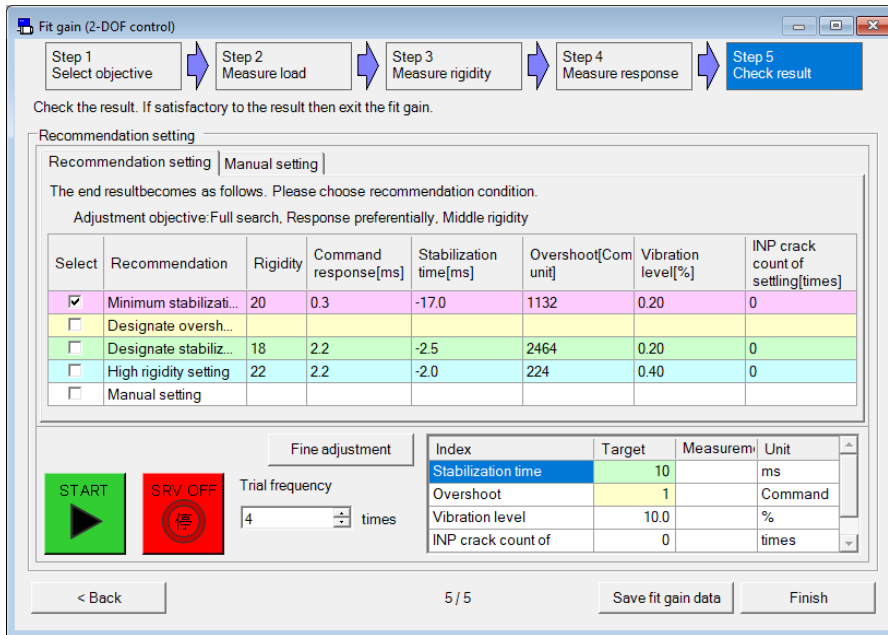

3 When measure is completed, measurement completed screen is displayed. Please click "OK".

4 When measurement completed screen is closed, please "Next" button click, and go to Step 5.

Step 5: Check result

Check the result.

1 Please check a measurement result and put a check into recommendation conditions suitable for use.

2 Click  button, perform test run and check a measurement result if needed.

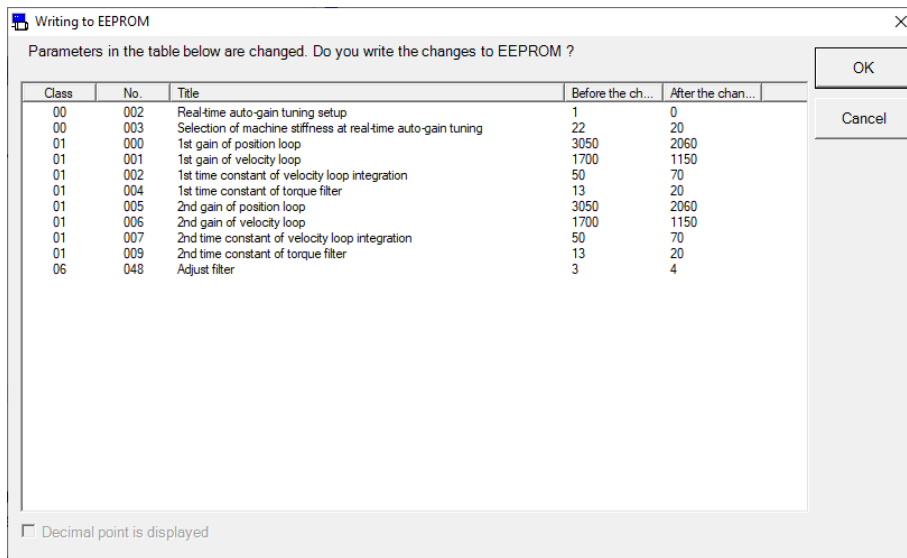

3 Click “Save fit gain data”, and please save the measurement result of all the steps.

- * The saved file can perform check of a recommendation setting, and send to driver by selecting "Read result from file" as the start-up of fit gain.

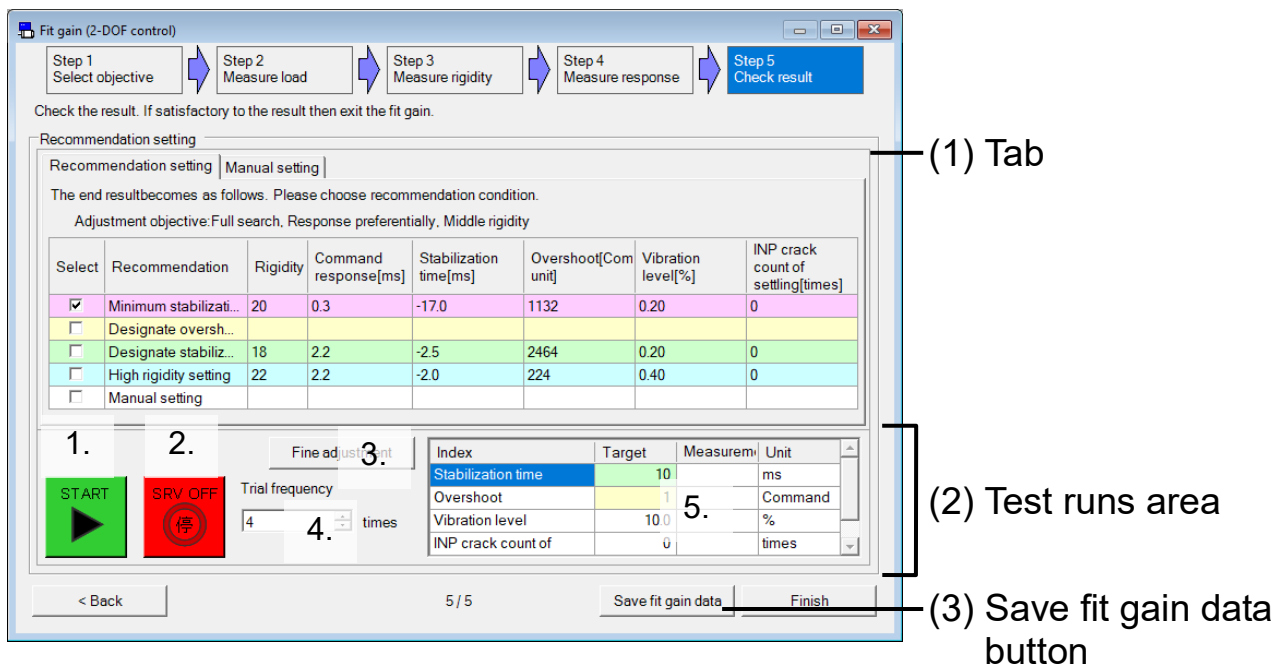

4 Click “Finish”, the exit of fit gain screen is displayed. Please click “Yes”.

5 When exit of fit gain screen is closed, and writing to EEPROM window will appear. Please click “OK”.

Recommendation setting

(1) Tab

Switch to “Recommendation setting” or “Manual setting”.

<Recommendation setting>

Select	Recommendation	Rigidity	Command response[ms]	Stabilization time[ms]	Overshoot[Com unit]	Vibration level[%]	INP crack count of settling[times]
1. <input checked="" type="checkbox"/>	2. Minimum stabilizati...	3. 20	4. 0.3	-17.0	1132	5. 0.20	0
<input type="checkbox"/>	Designate oversh...						
<input type="checkbox"/>	Designate stabiliz...	18	2.2	-2.5	2464	0.20	0
<input type="checkbox"/>	High rigidity setting	22	2.2	-2.0	224	0.40	0
<input type="checkbox"/>	Manual setting						

1. Select

Please select setting to send to the driver.

2. Recommendation

The name of recommendation conditions is displayed.

3. Rigidity

Rigidity of recommendation data is displayed.

4. Command response

Command response of recommendation data is displayed.

5. Index data

Index of recommendation data is displayed.

<Manual setting>

Recommendation setting | Manual setting

The last setup is chosen from combination measurement result of all the rigidity and responses.
Please push a Transfer button, after cell direct selection.

Stabilization time [ms] 1. Average 2. Normal INP clack Micro vibration Vibration

Command resp...	Rigidity17	Rigidity18	Rigidity19	Rigidity20	Rigidity21	Rigidity22
2.2	-2.0	-2.0	-1.0	-1.0	-1.0	-1.0
1.5	-4.5	-4.5	-4.0	-4.0	-4.0	-4.0
0.9	-8.0	-8.5	-8.0	-8.0	-8.0	-8.0
0.6	-10.0	-10.5	-10.5	-11.0	-11.0	-11.5
0.4	-12.0	-13.0	-13.0	-13.5	-14.0	-14.5
0.3	-14.0	-14.0	-14.5	-15.5	-15.5	-16.5

Transfer 4.

1. Index

Specify the target index to.

2. Extraction

Specify the kind of value to use to. You can select “Minimum”, “Maximum”, “Average”, “Dispersion (Max – Min)” and “Standard deviation”.

3. Index data

Index data corresponding to the combination of rigidity and command response is displayed.

4. Transfer

The contents of the cell selected by “3.” are sending to the driver.

(2) Test runs area

Test run is performed.

1. Test run

Test run is performed using the same operation pattern as Step 4.

- * When having selected external command, please drive a motor by external command after button is clicked.

2. Emergency stop

Do emergency stop by cut off electricity to a motor.

- * This becomes invalid when an external command is selected. Please use an external servo-on input etc. and enable it to perform an emergency stop.

3. Fine adjustment

Can do fine adjustment from recommendation conditions.

4. Trial frequency

Specifies the trial frequency when test run.

5. Measurement result

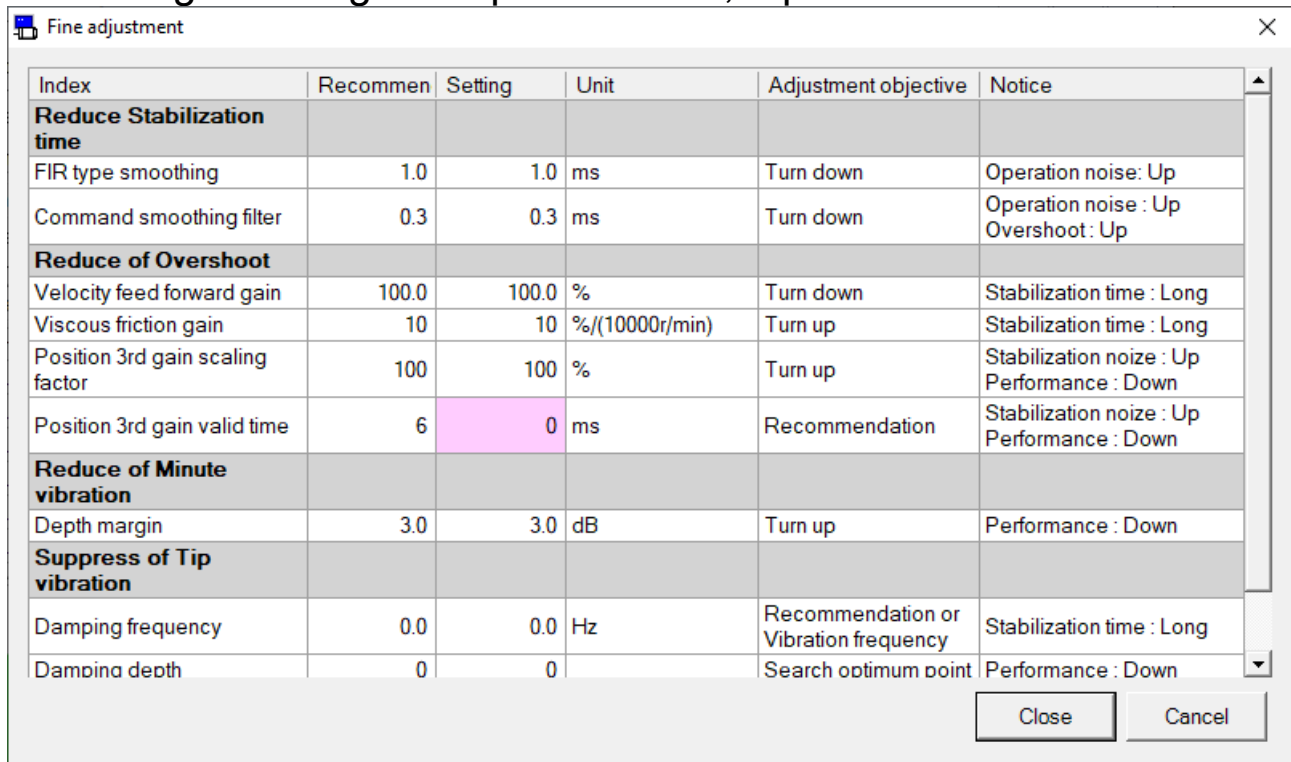

Measurement result of test run is displayed.

(3) Save fit gain data button

The measurement result of all the steps is saved. The saved file can perform check of a recommendation setting, and send to driver by selecting "Read result from file" as the start-up of fit gain.

Fine adjustment

According to change of a preset value, a parameter is sent to driver.

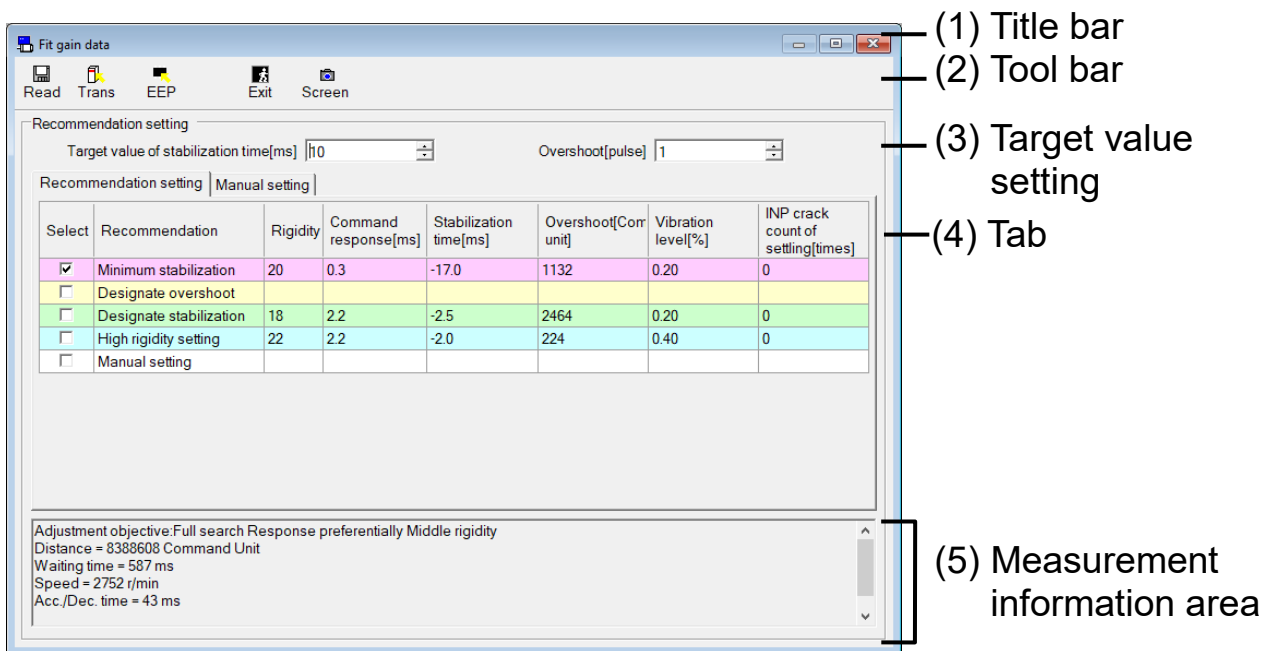

Index	Recommen	Setting	Unit	Adjustment objective	Notice
Reduce Stabilization time					
FIR type smoothing	1.0	1.0	ms	Turn down	Operation noise: Up
Command smoothing filter	0.3	0.3	ms	Turn down	Operation noise : Up Overshoot : Up
Reduce of Overshoot					
Velocity feed forward gain	100.0	100.0	%	Turn down	Stabilization time : Long
Viscous friction gain	10	10	%/(10000r/min)	Turn up	Stabilization time : Long
Position 3rd gain scaling factor	100	100	%	Turn up	Stabilization noise : Up Performance : Down
Position 3rd gain valid time	6	0	ms	Recommendation	Stabilization noise : Up Performance : Down
Reduce of Minute vibration					
Depth margin	3.0	3.0	dB	Turn up	Performance : Down
Suppress of Tip vibration					
Damping frequency	0.0	0.0	Hz	Recommendation or Vibration frequency	Stabilization time : Long
Dampina depth	0	0		Search optimum point	Performance : Down

Close Cancel

“Close” : Activate the change, and exit the screen.

“Cancel” : Inactivate the change, and exit the screen.

Structure of Fit gain data Screen

(1) Title bar

You can operate window.

(2) Tool bar

(Read)

Reads fit gain measure result from files (.fit5).
When this button is effective, a fit gain measure result file can be specified by drag and drop.

(Transmit)

Sends parameters to the drivers.

(EEPROM)

Write parameters to EEPROM of the driver.

(Exit)

Closes fit gain data screen.

(Screen)

Captures the screen and save into a file.

(3) Target value setting

“Target value of stabilization time”

Set the target value of stabilization time.

“Overshoot”

Set the target value of overshoot.

(4) Tab

Switch to “Recommendation setting” or “Manual setting”.

<Recommendation setting>

Recommendation setting		Manual setting						
Select	Recommendation	Rigidity	Command response[ms]	Stabilization time[ms]	Overshoot[Com unit]	Vibration level[%]	INP crack count of settling[times]

<input type="checkbox"/>	Manual setting							

1. Select

Please select setting to send to the driver.

2. Recommendation

The name of recommendation conditions is displayed.

3. Rigidity

Rigidity of recommendation data is displayed.

4. Command response

Command response of recommendation data is displayed.

5. Index data

Index of recommendation data is displayed.

<Manual setting>

Recommendation setting | Manual setting

Please push a Trans button, after cell direct selection.

Stabilization time [r1]: Average 2. Normal INP clack Micro vibration Vibration

Command resp...	Rigidity17	Rigidity18	Rigidity19	Rigidity20	Rigidity21	Rigidity22
2.2	-3.0	-2.5	-2.5	-2.0	-2.0	-2.0
1.5	-5.5	-5.0	-5.5	-5.0	-5.0	-5.0
0.9	-9.0	-9.5	-9.0	-8.5	-8.5	-9.0
0.6	-12.0	-11.5	-11.5	-12.0	-11.5	-12.5
0.4	-14.25	-14.5	-14.5	-15.0	-14.5	-15.5
0.3	-16.0	-16.0	-15.75	-17.0	-16.5	-17.5

1. Index
Specify the target index to.
2. Extraction
Specify the kind of value to use to. You can select “Minimum”, “Maximum”, “Average”, “Dispersion (Max – Min)” and “Standard deviation”.
3. Index data
Index data corresponding to the combination of rigidity and command response is displayed.

(5) Measurement information area

Objective of servo adjustment and operation pattern at the time of measurement are displayed.

- Notes 1) Please refer to application scope and remarks specified in the driver manual or technical reference.
- Notes 2) Parameter set on this screen is inputted into Driver. As PANATERM does not maintain this value, please perform the recording it to EEPROM of driver after completion of adjustment.
- Notes 3) Parameter settings will be needed even at the fit gain. Please read the operation manual or technical reference to understand the manual content prior to this operation.
- Notes 4) The fit gain screen cannot open during opening some screens. For more information please refer to page 236 “Fit gain screen (2 degrees of freedom control) behavior”.

Object Editor screen

Realize easier troubleshooting without connecting to the host controller by displaying and editing the object list of the driver.

Note) Please modify objects with enough care after reading the driver's instruction manual or technical reference carefully, as some objects give large effect to operations of drivers or motors.
Object editor cannot be performed through RS232 communication.

Open the Object Editor window

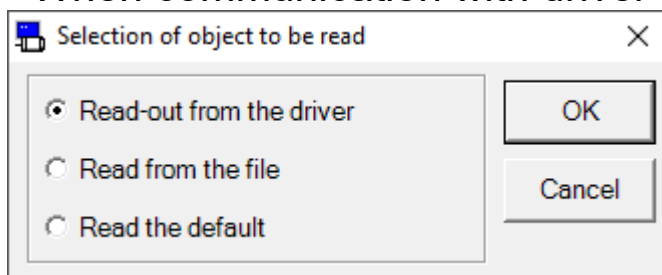

1 Start "PANATERM".

(Please refer to Article 5. Start up and Close down in details)

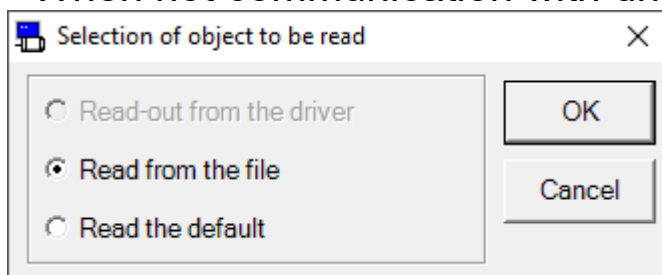

2 Click "Other" > "Object Editor" of the tool bar on the main screen.

3 Selection of object to be read window is displayed.

<When communication with driver>

<When not communication with driver>

4 Select the origin of objects, and click.

- “Read - out from the driver”

The objects set in the driver are read communicating the driver connected. If this mode is selected, modifications of the object values are reflected to the driver immediately.

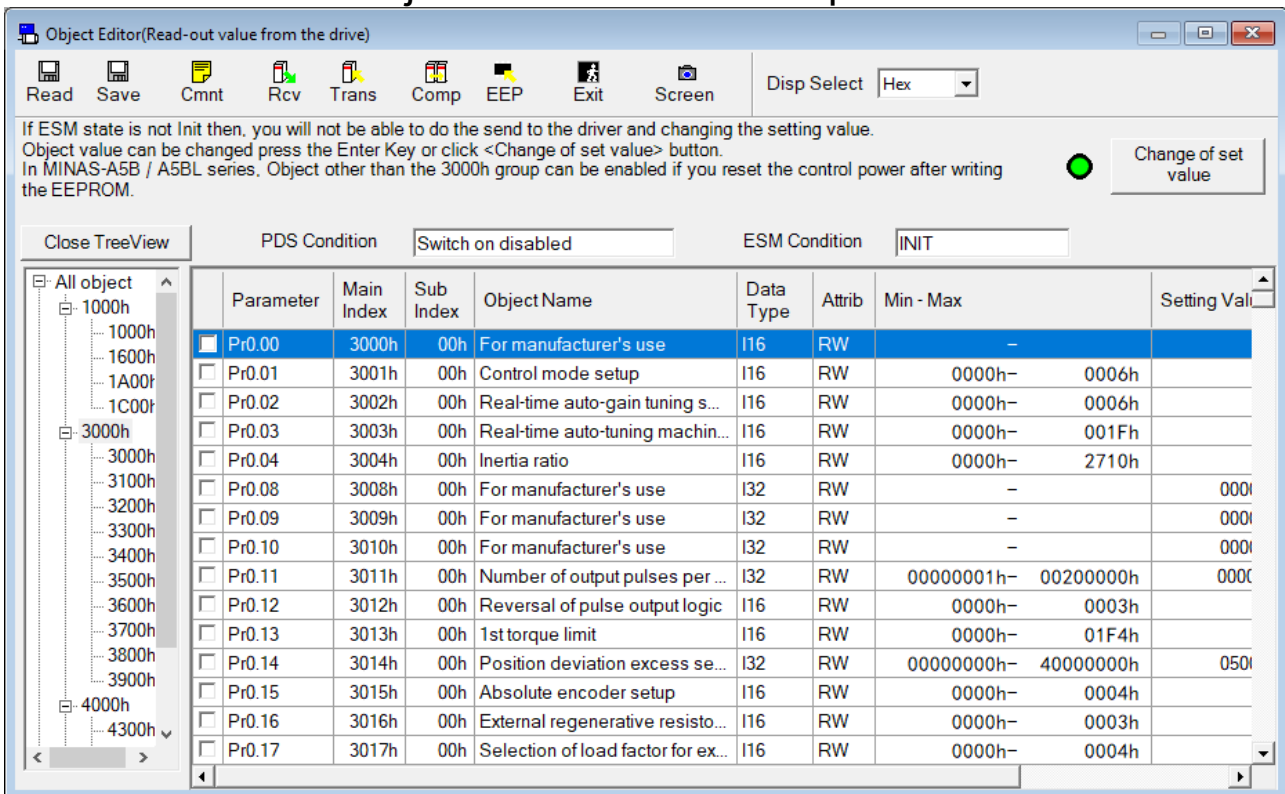

- “Read from the file”

Object Data files already edited (.obj5) are read. Object modifications are not reflected to the driver connected unless “Transmit the object to the driver” is executed when they are “Read from the file”.

- “Read the default”

Default set values saved at the time of installation is read. The object modifications are not reflected unless “Transmit the object to the driver” is executed as the case of “Read from the file”.

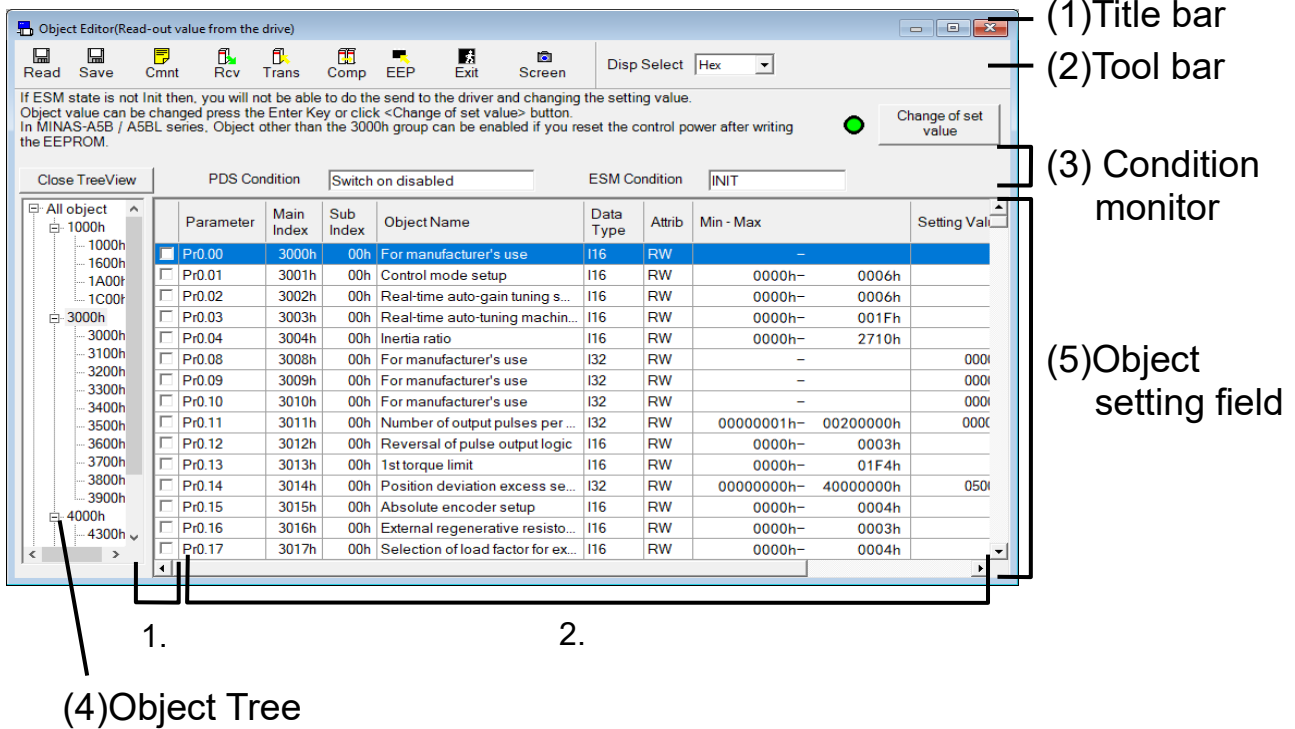

5 Click “OK”. The Object Editor window is opened.

Close the Object Editor window

Click  (Exit) on the tool bar.

Structure of Object Editor screen

(1) Title bar

The origins of reference of objects reference are displayed. Following buttons are used to operate windows.

Display the window in full screen

Close the window

(2) Tool bar

Saving, reading, some other use basic operation commands on objects are listed.

(Read)

Reads objects from files (.obj5).

When this button is effective, an object file can be specified by drag and drop.

(Save)

Writes objects to files (.obj5).

(Comment)

Makes comments attached to objects files.

(Receive)

Receives objects from the driver.

(Transmit)

Sends objects to the driver.

(Compare)

Compares objects on editing with other objects.

(EEPROM)

Write objects to EEPROM of the driver.

(Exit)

Closes object editor screen.

(Screen)

Captures the screen and save into a file.

(Disp Select)

Change the numerical display of objects being displayed.

Hex: Displayed in hexadecimal, add "h" to the end of the number.

Dec: Displayed in decimal number, and sign is set.

Bin : Displayed in binary number, add "b" to the end of the number. Min-Max columns are displayed in hexadecimal.

(3) Condition monitor

(PDS Condition)

Show the PDS Condition of the Driver.

The condition is changed depending on the value of the object of 6041h-00h.

(ESM Condition)

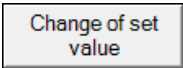

It shows condition whether rewriting objects in the driver is possible or not.

<When communication with driver>

INIT

In this condition, you can rewrite the driver object.

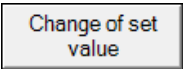

is displayed next to , and becomes possible to edit and send the object setting value.

other than
INIT

In this condition, you cannot rewrite the driver object.

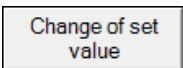

is not displayed next to , and becomes impossible to edit and send the object setting value.

<When not communication with driver>

-

is displayed next to , and becomes possible to edit and send the object setting value.

(4) Object Tree

If you select a node from the object tree, related objects are displayed at object setting field.

If you click “Close TreeView” / “Disp TreeView” button, switch the Hide / Show of Object tree.

If you select “All object”, all objects are displayed.

If you select a parent node, objects of all the child nodes are displayed which following selected parent node.

If you select a child node, objects of the selected node are displayed.

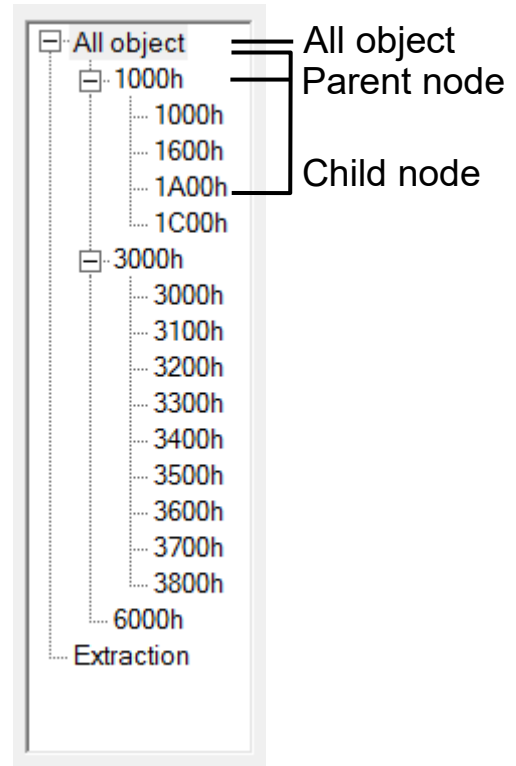

If you select “Extraction”, the extracted objects are displayed .

The objects selected in the object setting field are displayed.

Refer to the instruction manual of the driver or technical reference for more information about each object.

Note) If you receive or transmit the object during the extraction display, targets are only extracted objects.

If the object is read during the extraction display, “All object” is selected and extraction display will be canceled.

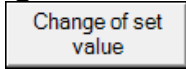

(5) Object setting field

1. Extraction selection check box

It is possible to extract the object by checking ON.

Extraction selection is saved at the end of object editor, and read automatically when the object editor startup.

2. You can edit and set the object.

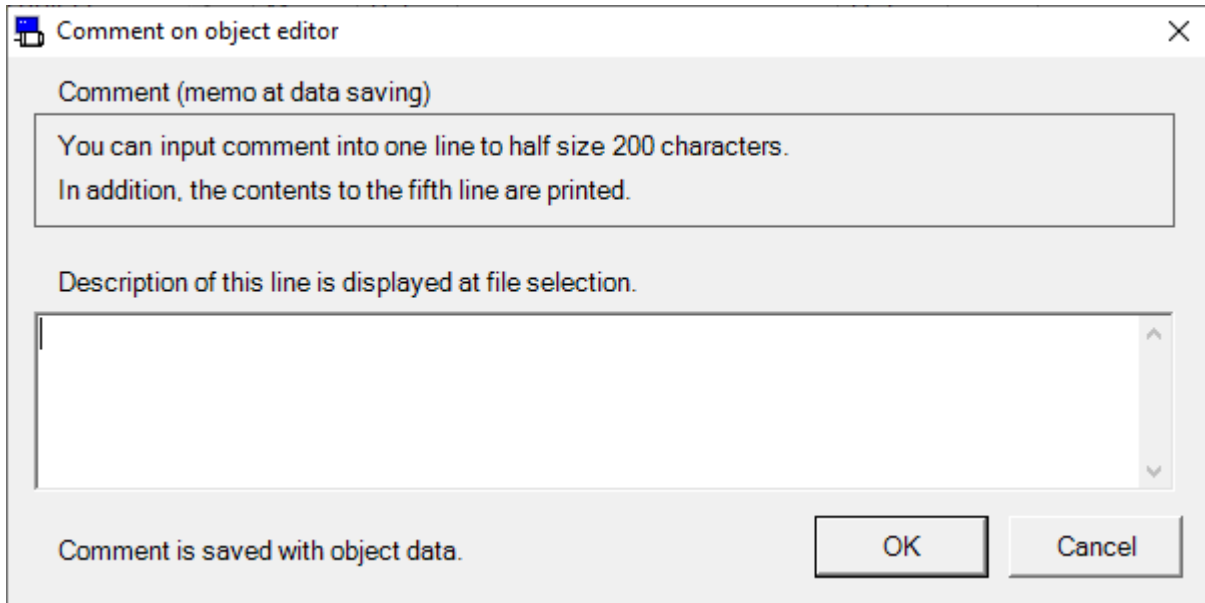

“Parameter”	Show the parameter classification and number corresponding to the object. Not displayed if you select “All object” or if the corresponding parameter does not exist.
“Main Index”	Show the Main Index of the object.
“Sub Index”	Show the Sub Index of the object.
“Object Name”	Show the Object Name.
“Data Type”	Show the Data Type of the object. I8 : Integer 8 I16 : Integer 16 I32 : Integer 32 U8 : Unsigned 8 U16 : Unsigned 16 U32 : Unsigned 32 Bool : Boolean OS : Octet String VS : Visible String
“Attrib”	Show the attribute of the object. RO : Read-Only attribute RW : Read-Write attribute
“MIN-MAX”	Show the setting range of the object. If “Data Type” is OS or VS, setting range is not displayed.
“Setting Value”	Show the setting value of the object. If “Attrib” is RW and “Setting Value” is number, you can change the setting value of the object. Depending on the choice of “Disp Select”, there is an input limit. Hex : 0 to 9, “A” to “F” (after editing, “h” is automatically added to the end.) Dec : 0 to 9, “-”sign Bin : 0 to 1 (after editing, “b” is automatically added to the end.) After changing the setting value, the change is reflected by pressing the [ENTER] key or clicking the  (Change of set value). Press the [ESC] key to return to the original value.
“Units”	Show the unit of the setting value of the object.

Comment

On saving set objects in a file, comments can be saved together. These comments do not effect operations of the driver.

Making Comment

- 1 Click  (Comment) on the tool bar, and open the comment window.

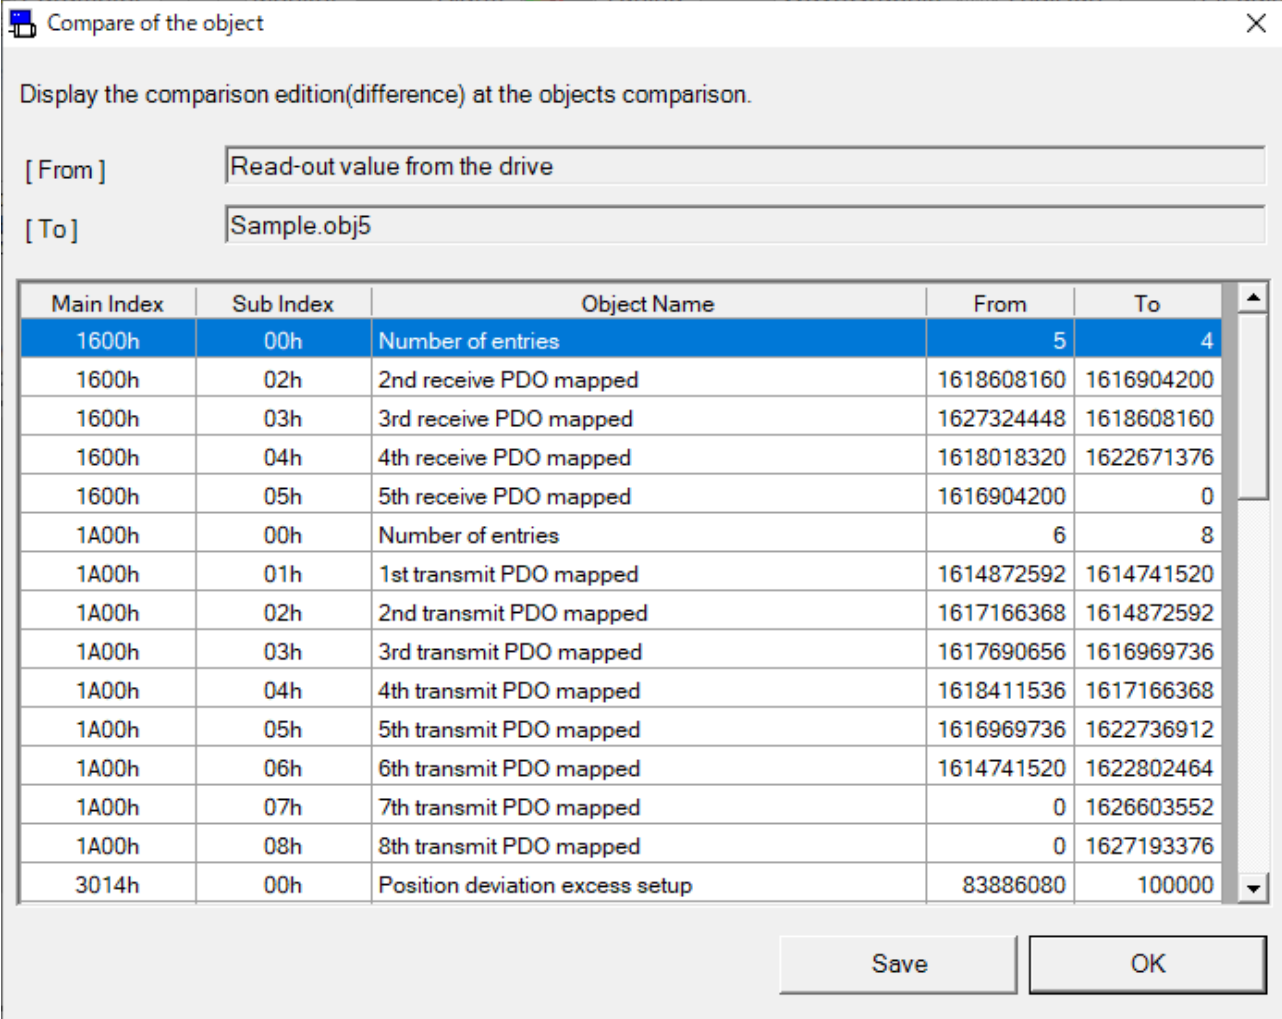

- 2 Click comment box and input comments.
- 3 After completing comment input, click "OK".

Comparison

Objects being edited can be compared with other objects.

Comparison of objects

- 1 Click  (Comparison) on the toolbar, please select the file (.obj5) to be compared.
- 2 Comparison result of the objects is displayed.

Compare of the object

Display the comparison edition(difference) at the objects comparison.

Save OK

- 3 Click “Save”, comparison result of the objects can be saved at a file.

- Notes 1) Please refer to the manual of the driver or technical reference for details of each object's function and so on.
- Notes 2) Even if objects are sent to the driver, objects are turned to the original value before modification if the power supply of the driver is turned off without writing to EEPROM of the driver. Object modifications list are displayed on EEPROM writing. Please check the modification carefully.
- Notes 3) Do not turn off the power supply of the PC during writing to EEPROM of the driver. Data context cannot be guaranteed if the power supply is turned off during writing.
- Notes 4) Some objects become valid after modifications to the new data, writing EEPROM, and power supply reset. (On inputting, that issue is displayed. Please refer to the manual of the driver or technical reference and confirm on the objects)
- Notes 5) Object editor screen indication may be different from the actual object value of the driver in case PANATERM function windows which change the objects (ex. Trial Run, Pin Assign, Analog Input) is opened. In such case, press the reception button and update the object of the driver to the latest one.
- Notes 6) If you cannot edit object value during the communication with driver, the driver may be in condition which is not rewritable. In this case, please check "ESM Condition" is "INIT" and also the driver is in condition which is rewritable.
- Notes 7) The object editor screen cannot open during opening some screens. For more information please refer to page 237 "Object editor screen behavior".

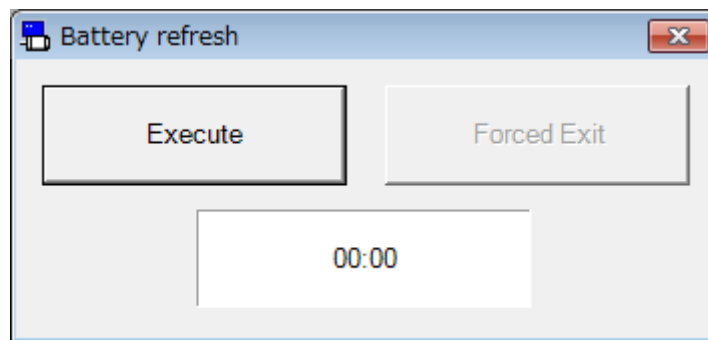

Battery Refresh screen

Will perform a battery forced discharge of the encoder.

Note) Battery refresh can be executed only by the corresponding encoder.
Please note that there is a possibility that the battery alarm occurs during the refresh operation.
Battery refresh cannot be performed through RS232 communication.

Open the Battery refresh window

- 1 Start "PANATERM".
(Please refer to Article 5. Start up and Close down in details)
- 2 Click "Other" > "Battery Refresh" of the tool bar on the main screen.
- 3 The Battery Refresh window is opened.

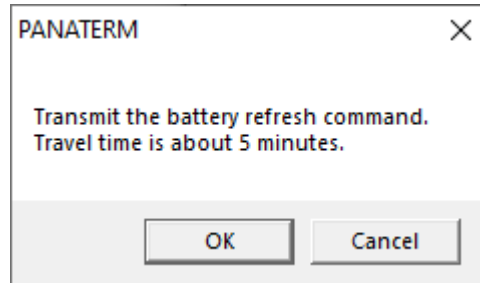

Close the Battery refresh window

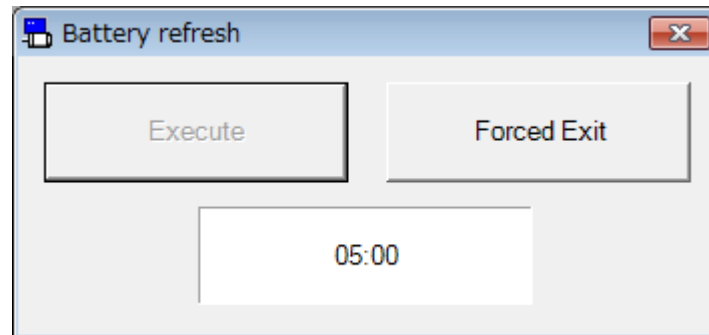

Click  of upright on the window

Procedure for Battery refresh

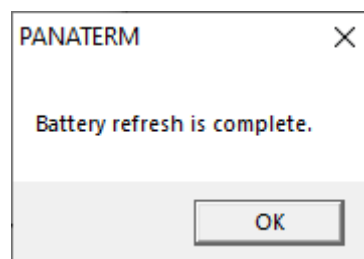

- 1 Click "Execute".
- 2 Confirmation dialog is displayed.
Click "OK" then Battery refresh is executed.

- 3 The remaining time is displayed as "05:00".
Will be gradually countdown.

- 4 When the remaining time reaches "00:00", the battery refresh is complete.

Interruption of Battery refresh

Click “Forced Exit” then exit forcibly battery refresh.

Notes 1) Remaining time of the countdown after the battery refresh execution, please note that after the end of the battery refresh screen is also continuing.

Notes 2) The battery refresh screen cannot open during opening some screens. For more information please refer to page 238 “Battery refresh screen behavior”.

Block operation Editor screen

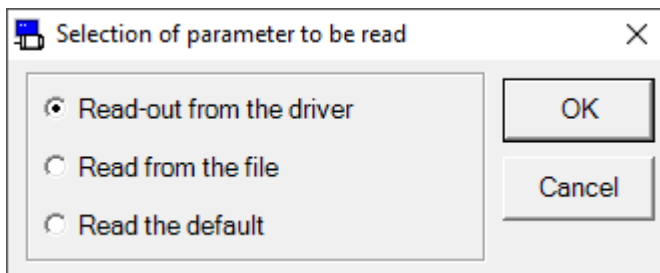

Realize easier block operation by displaying and editing the block operation and block parameter of the driver.

Note) Please modify parameters with enough care after reading the driver's instruction manual or technical reference carefully, as some parameters give large effect to operations of drivers or motors.
Block operation cannot be performed through RS232 communication.

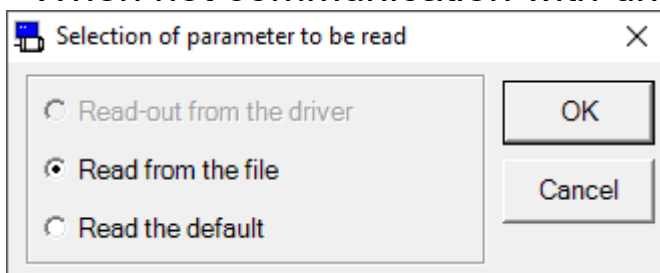

Open the Block operation Editor window

- 1 Start "PANATERM".
(Please refer to Article 5. Start up and Close down in details)
- 2 Click "Other" > "Block operation Editor" of the tool bar on the main screen.
- 3 Selection of parameter to be read window is displayed.

<When communication with driver>

<When not communication with driver>

4 Select the origin of parameters, and click.

- “Read - out from the driver”

The parameters set in the driver are read communicating the driver connected. If this mode is selected, modifications of the parameter values are reflected to the driver immediately.

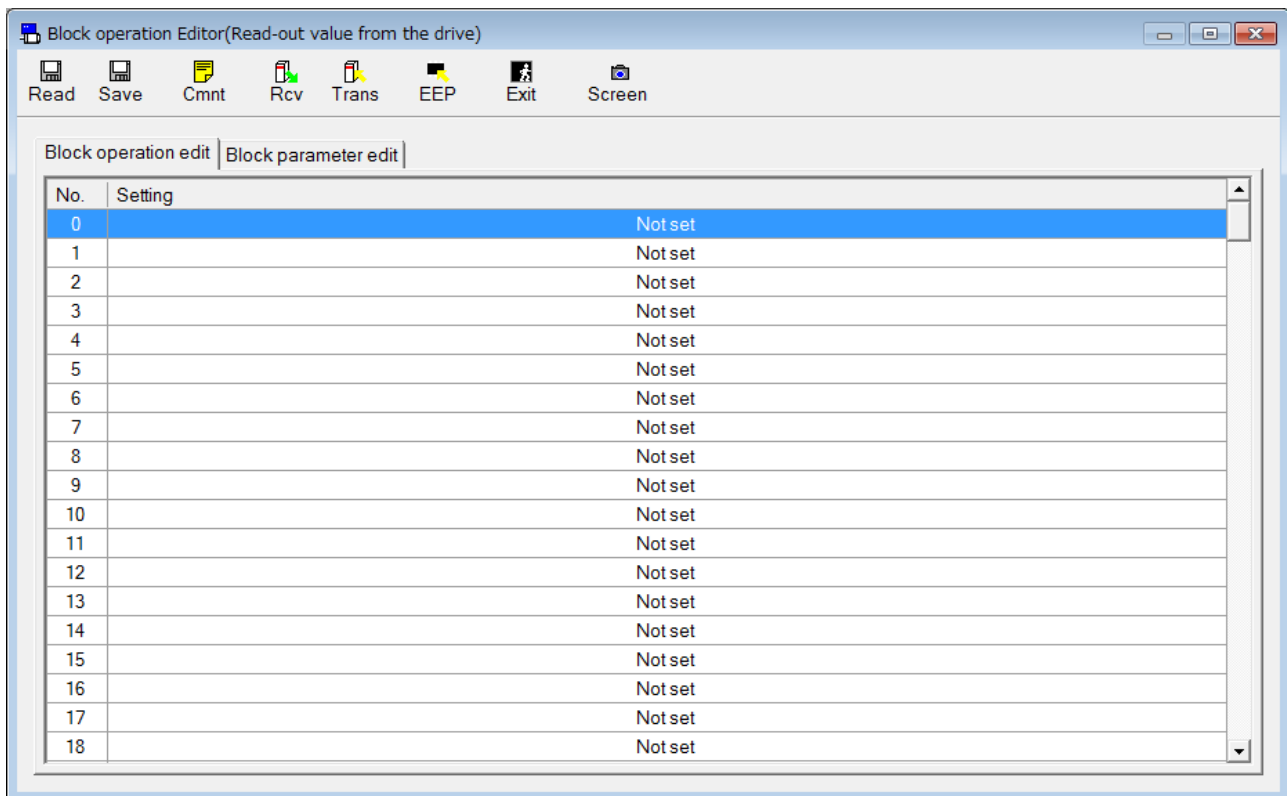

- “Read from the file”

Parameter files already edited (.obj5) are read. Parameter modifications are not reflected to the driver connected unless “Transmit the parameter to the driver” is executed when they are “Read from the file”.

- “Read the default”

Default set values saved at the time of installation is read. The parameter modifications are not reflected unless “Transmit the parameter to the driver” is executed as the case of “Read from the file”.

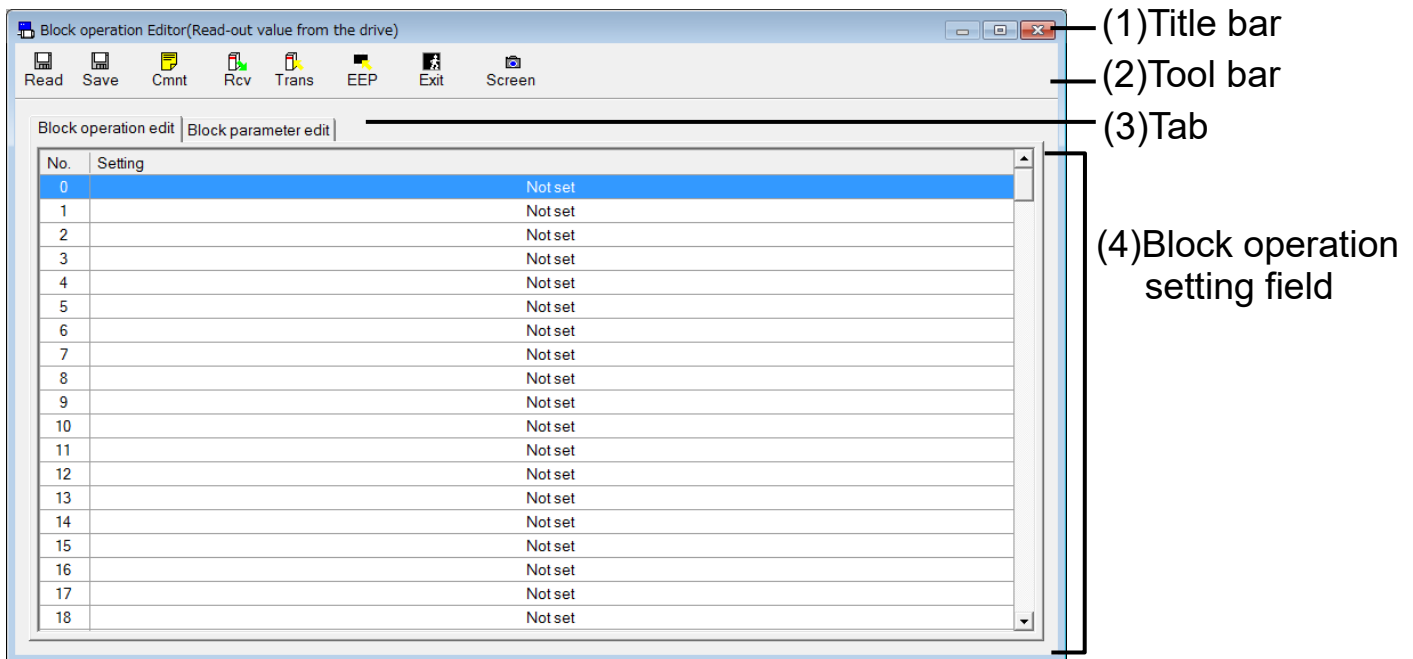

5 Click “OK”. The Block operation Editor window is opened.

Close the Block operation Editor window

Click  (Exit) on the tool bar.

Structure of Block operation editor screen

(1) Title bar

The origins of reference of parameters reference are displayed. Following buttons are used to operate windows.

Display the window in full screen

Close the window

(2) Tool bar

Saving, reading, some other basic operation commands on parameters are listed.

(Read)

Reads parameters from files (.obj5).

When this button is effective, a parameter file can be specified by drag and drop.

(Save)

Writes parameters to files (.obj5).

(Comment)

Makes comments attached to parameters files.

(Receive)

Receives parameters from the driver.

(Transmit)

Sends parameters to the driver.

(EEPROM)

Write parameters to EEPROM of the driver.

(Exit)

Closes Block operation editor screen.

(Screen)

Captures the screen and save into a file.

(3) Tab

Switch Block operation setting field display to “Block operation edit”, “Block parameter edit”.

(4) Block operation setting

Editing and setting of block operation command parameters and block operation parameter are available.

Setting method of Block operation command

1 Select the tab of “Block operation edit”.

* The settings row is displayed current block operation command. When block operation command is not set then, it is displayed “Not set”.

When the command cannot convert to block operation command then, it is displayed “Not defined command” or “Unusual command settings”.

No.	Setting
0	Not set
1	Not set
2	Not set
3	Not set
4	Not set
5	Not set
6	Not set

10	Not set
11	Not set
12	Not set
13	Not set
14	Not set
15	Not set
16	Not set
17	Not set
18	Not set

- 2 Double-click the block command row to want be set.
- 3 Block operation command argument Edit window is displayed.

Parameter name	Set value
Velocity No.	0:V0
Acceleration No.	0:A0
Deceleration No.	0:D0
Transition condition	0:0
Relative movement distance	0

- 4 Select the block operation command from the combo box, and please set each argument.
- 5 Click "OK". Set the block operation command with the current settings.
Click "Reset". Set the "Not set" and close this screen.
Click "Cancel". Inactivate the change, and exit the screen.

Setting method of Block operation command

1 Select the tab of “Block parameter edit”.

Block operation edit		Block parameter edit				
Class	No.	Parameter name	Setup range		Set value	Unit
60	000	Block operation velocity V0	0-	20000	0	r/min
60	001	Block operation velocity V1	0-	20000	0	r/min
60	002	Block operation velocity V2	0-	20000	0	r/min
60	003	Block operation velocity V3	0-	20000	0	r/min
60	004	Block operation velocity V4	0-	20000	0	r/min
60	005	Block operation velocity V5	0-	20000	0	r/min
60	006	Block operation velocity V6	0-	20000	0	r/min
60	007	Block operation velocity V7	0-	20000	0	r/min
60	008	Block operation velocity V8	0-	20000	0	r/min
60	009	Block operation velocity V9	0-	20000	0	r/min
60	010	Block operation velocity V10	0-	20000	0	r/min
60	011	Block operation velocity V11	0-	20000	0	r/min
60	012	Block operation velocity V12	0-	20000	0	r/min
60	013	Block operation velocity V13	0-	20000	0	r/min
60	014	Block operation velocity V14	0-	20000	0	r/min
60	015	Block operation velocity V15	0-	20000	0	r/min
60	016	Block operation acceleration A0	0-	10000	0	ms/(3000r/min)
60	017	Block operation acceleration A1	0-	10000	0	ms/(3000r/min)
60	018	Block operation acceleration A2	0-	10000	0	ms/(3000r/min)
60	019	Block operation acceleration A3	0-	10000	0	ms/(3000r/min)

2 Block parameter edit screen is displayed.

“Class” Parameter classifications are indicated.

“No.” Parameter numbers are indicated.

“Parameter name” Parameter names are indicated.

“Setup range” Maximum & minimum value of parameter setting is indicated.

“Set value” Parameter value. Its value can be modified.
Parameters with  on the set values are set with the combo boxes. After selecting the values from the combo boxes, input the [ENTER] key.
Parameters without  on the set values, are inputted with the number keys directly, or modified clicking  and changing the values. To set the values, input the [ENTER] key
If the [ESC] key is inputted, the value is return to the original one.

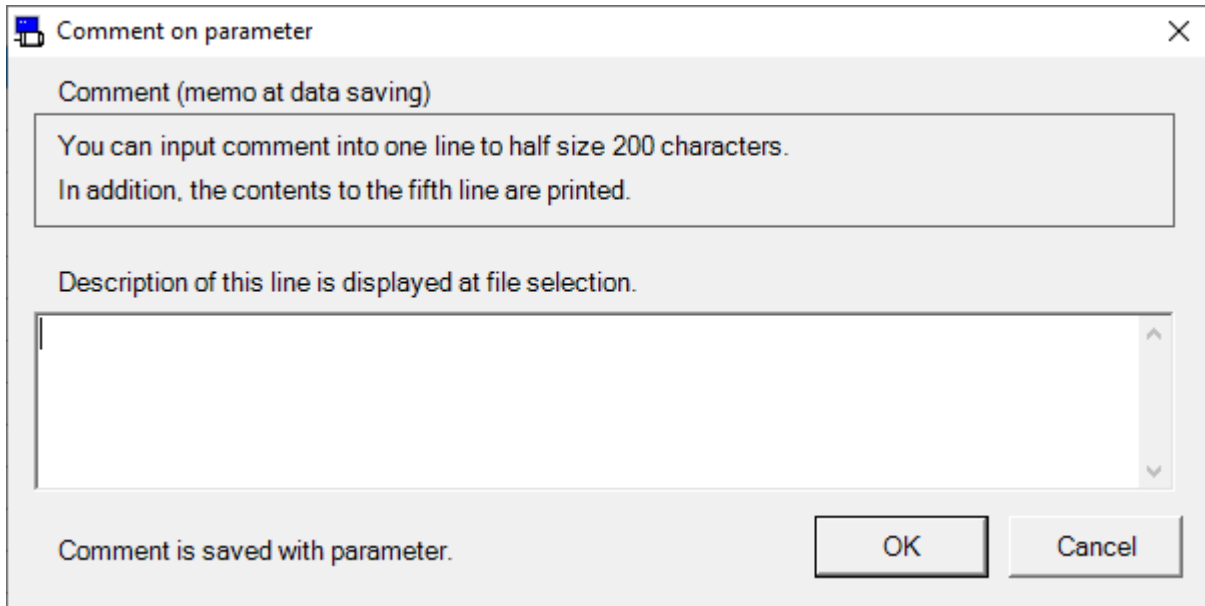

“Unit” Units of the parameter set values are indicated.

Comment

On saving set parameters in a file, comments can be saved together. These comments do not effect operations of the driver.

Making Comment

- 1 Click  (Comment) on the tool bar, and open the comment window.

- 2 Click comment box and input comments.
- 3 After completing comment input, click "OK".

- Notes 1) Please refer to the manual of the driver or technical reference for details of each parameter's function and so on.
- Notes 2) Even if parameters are sent to the driver, parameters are turned to the original value before modification if the power supply of the driver is turned off without writing to EEPROM of the driver. Parameter modifications list are displayed on EEPROM writing. Please check the modification carefully.
- Notes 3) Do not turn off the power supply of the PC during writing to EEPROM of the driver. Data context cannot be guaranteed if the power supply is turned off during writing.
- Notes 4) Some parameters become valid after modifications to the new data, writing EEPROM, and power supply reset. (On inputting, that issue is displayed. Please refer to the manual of the driver or technical reference and confirm on the objective parameters)
- Notes 5) The block operation editor screen cannot open during opening some screens. For more information please refer to page 238 "Block operation editor screen behavior".

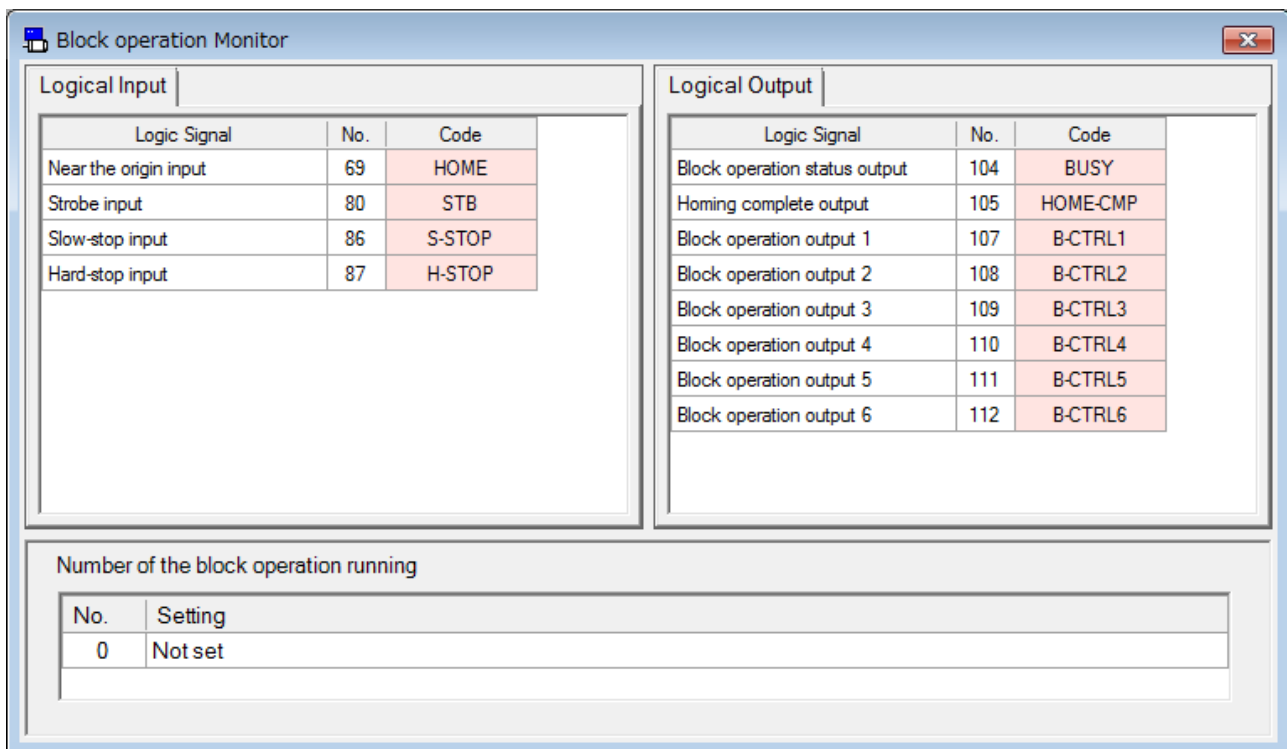

Block operation Monitor screen

You can display and check the execution status of the block operation.

Note) Block operation monitor cannot be performed through RS232 communication.

Open the Block operation Monitor window

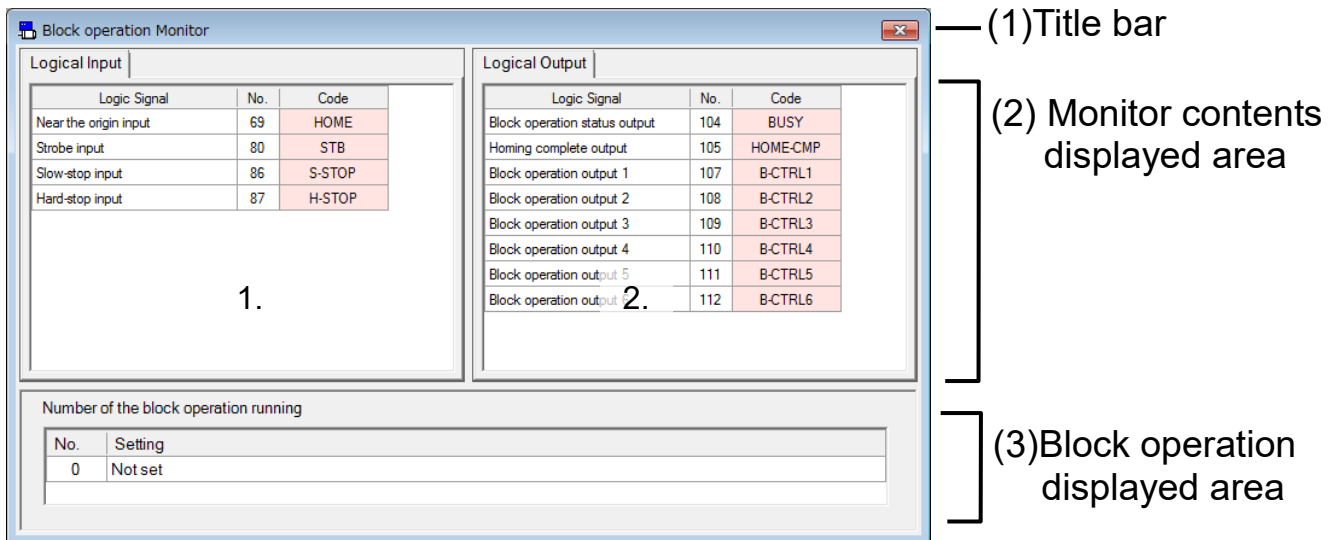

- 1 Start "PANATERM".
(Please refer to Article 5. Start up and Close down in details)
- 2 Click "Other" > "Block operation Monitor" of the tool bar on the main screen.
- 3 The Block operation Monitor window is opened.

Close the Block operation Monitor window

Click  of upright on the window

Structure of Block operation monitor screen

(1) Title bar

You can operate window.

(2) Monitor contents displayed area

Display monitoring information.

1. Input signal conditions monitoring

Display signal condition of input.

Red : Active

Pink: Inactive

2. Output signal condition monitoring

Display Signal condition of output

Red : Active

Pink: Inactive

(3) Block operation displayed area

Display the number of the block operation running.

- Notes 1) Using USB communication as data receipt between Driver and PC, there are accidental errors, delay of display value on the screen and actual driver value and recoded time.
- Notes 2) If polarity is (+), (+) signal is not displayed.
- Notes 3) Block operation monitoring function is not precious measurement instrument. Block operation monitoring display shall be used as rough estimate.
- Notes 4) The block operation monitor screen cannot open during opening some screens. For more information please refer to page 239 “Block operation monitor screen behavior”.

Deterioration diagnosis screen

You can display and check the deterioration and aging state of the equipment from the detection apparatus capable of information by the motor.

Note) Deterioration diagnosis cannot be performed through RS232 communication.

Open the Deterioration diagnosis window

- 1 Start "PANATERM".
(Please refer to Article 5. Start up and Close down in details)
- 2 Click "Other" > "Deterioration diagnosis" of the tool bar on the main screen.
- 3 The Deterioration diagnosis window is opened.

The screenshot shows the "Deterioration Diagnosis" window with the following components:

- Tool Bar:** Rcv, Trans, Exit, EEP, Screen.
- Deterioration diagnosis setting:** Enable (selected), Disable.
- Load factor estimated:** Convergence judgment time[s] (Pr5.66) set to 150.0.
- Diagnosis Info Table:**

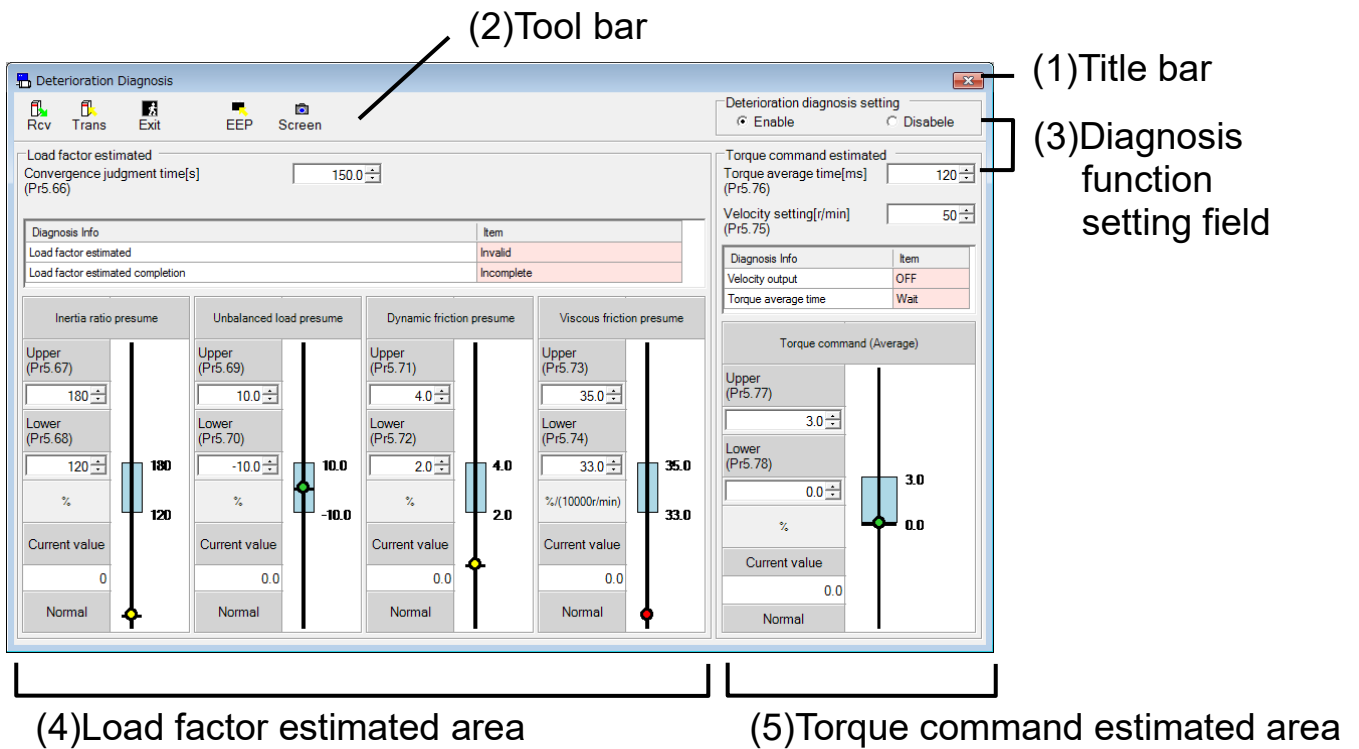

Diagnosis Info	Item
Load factor estimated	Invalid
Load factor estimated completion	Incomplete
- Diagnostic Parameters (Sliders):**
 - Inertia ratio presume:** Upper (Pr5.67) 180, Lower (Pr5.68) 120, Current value 0, Normal.
 - Unbalanced load presume:** Upper (Pr5.69) 10.0, Lower (Pr5.70) -10.0, Current value 0.0, Normal.
 - Dynamic friction presume:** Upper (Pr5.71) 4.0, Lower (Pr5.72) 2.0, Current value 0.0, Normal.
 - Viscous friction presume:** Upper (Pr5.73) 35.0, Lower (Pr5.74) 33.0, Current value 0.0, Normal.
 - Torque command (Average):** Upper (Pr5.77) 3.0, Lower (Pr5.78) 0.0, Current value 0.0, Normal.
- Additional Settings:** Torque command estimated (Pr5.76) 120, Velocity setting[r/min] (Pr5.75) 50.
- Diagnosis Info Table (Right):**

Diagnosis Info	Item
Velocity output	OFF
Torque average time	Wait

Close the Deterioration diagnosis window

Click  (Exit) on the tool bar.

Structure of Deterioration diagnosis screen

(1) Title bar

You can operate window.

(2) Tool bar

Receiving, transmitting, some other basic operation commands on parameters are listed.

(Receive)

Receives parameters from the driver.

(Transmit)

Sends parameters to the driver.

(Exit)

Closes parameter screen.

(EEPROM)

Write parameters to EEPROM of the driver.

(Screen)

Captures the screen and save into a file.

(3) Diagnosis function setting field

To enable / disable the deterioration diagnosis function.

When the screen is displayed, it is set to the current state of the driver.

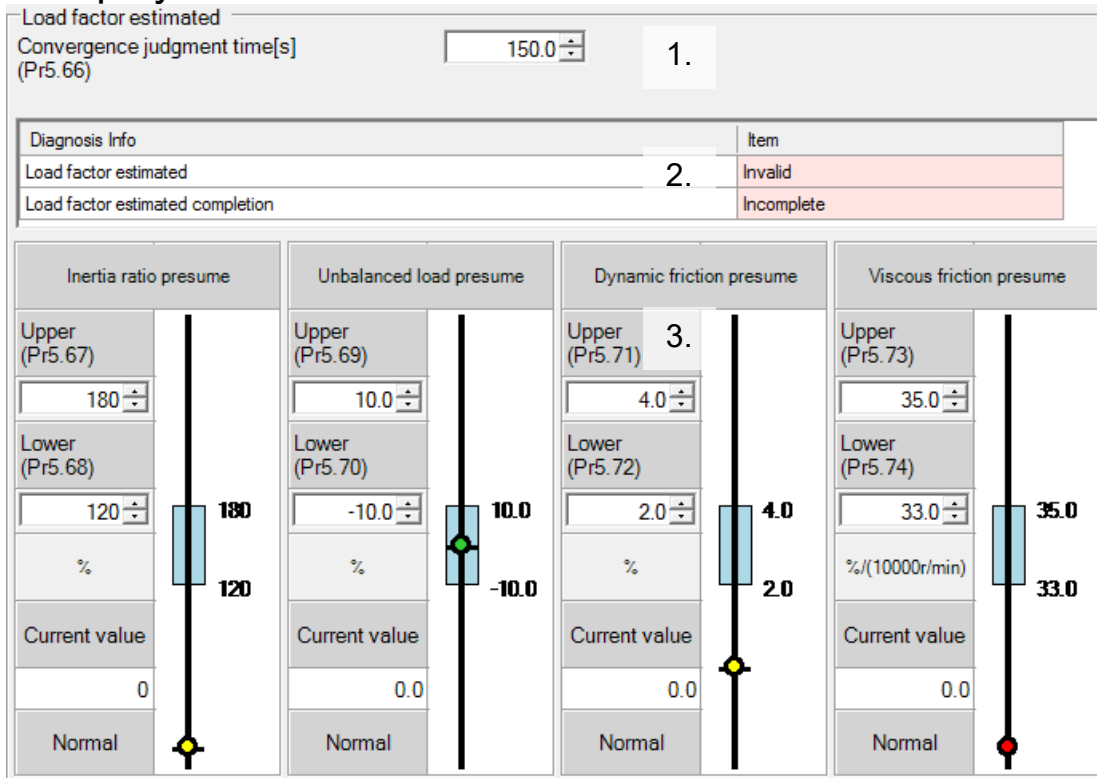

Enabled : Deterioration diagnosis function is enabled.

Disabled : Deterioration diagnosis function is disabled.

(4) Load factor estimated area

It displays the estimated information about the load characteristics.

1. Estimated information setting

Set the estimated condition of the load factor estimation.

“Convergence judgment time”

Sets time for deemed convergence of real-time auto tuning load characteristics estimate.

2. Diagnosis information Monitor

Display the diagnostic status of the load characteristics estimation.

“Load factor estimated”

Display the load factor estimated of real time auto tuning indicates whether valid.

“Load factor estimated completion”

If load factor estimate is valid and it was possible that the data necessary to estimate is to get more than convergence determination time, will be completed.

3. Diagnostic slider

Display the slider that indicates the diagnostic state of deterioration diagnostic information related to the load factor.

“Inertia ratio presume”

Display the diagnostic state of inertia ratio.

“Unbalanced load presume”

Display the diagnostic state of unbalanced load.

“Dynamic friction presume”

Display the diagnostic state of dynamic friction.

“Viscous friction presume”

Display the diagnostic state of viscous friction.

(5) Torque command estimated area

It displays the estimated information about the torque command.

Torque command estimated

Torque average time[ms] (Pr5.76) 120

1. Velocity setting[r/min] (Pr5.75) 50

Diagnosis Info	Item
Velocity output	2. OFF
Torque average time	Wait

Torque command (Average)

3. Upper (Pr5.77) 3.0

Lower (Pr5.78) 0.0

%

Current value 0.0

Normal

1. Estimated information setting

Set the estimated condition of the torque command estimation.

“Torque average time”

Sets time required to compute the torque command average (weighted frequency).

“Velocity setting”

Sets deterioration diagnosis velocity output (V-DIAG).

2. Diagnosis information Monitor

Display the diagnostic status of the torque command estimation.

“Velocity output”

It turned on when the motor speed matches the velocity setting.

“Torque average time”

It will be completed when the velocity output is on and has passed more than the torque average time.

3. Diagnostic slider

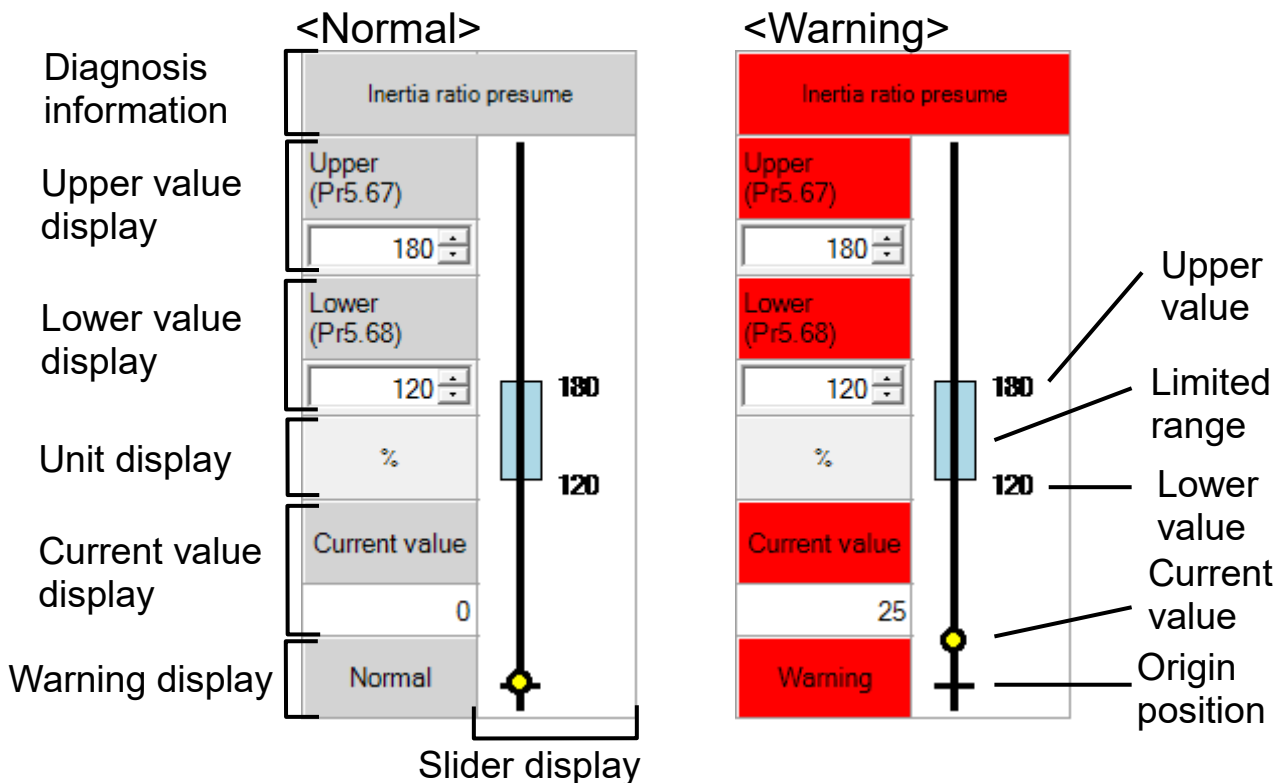

Display the slider that indicates the diagnostic state of deterioration diagnostic information related to the torque command.

“Torque command (Average)”

Display the diagnostic state of torque command (average).

Structure of Diagnostic slider

Diagnostic slider is composed of the following elements.
Warning during the occurrence of the deterioration diagnostic information of interest, background color as a warning display is displayed in red.

- (Diagnosis information) Display the name of diagnosis information.
- (Upper value display) Set upper limit and lower limit of diagnosis information. Upper values and Lower values, are inputted with the number keys directly, or modified clicking  and changing the values from each setting area. To set the values, input the [ENTER] key or click  (Transmit) on Toolbar.
- (Lower value display) Set lower limit of diagnosis information. Lower values, are inputted with the number keys directly, or modified clicking  and changing the values from each setting area. To set the values, input the [ENTER] key or click  (Transmit) on Toolbar.
- (Unit display) Display the unit of diagnosis information.
- (Current value display) Display the current value of diagnostic information acquired from the driver.
- (Warning display) Display the occurrence of deterioration diagnosis warning.
- (Slider display) Display estimation result of diagnosis information with slider. The drawing range of the slider changes according to the setting of the upper limit value and lower limit value.

Current value	<p>Display the current value of diagnostic information with ○.</p> <p>In the limit range :Displayed as </p> <p>Out the limit range :Displayed as </p> <p>Out the drawing range :Displayed as </p>
Upper value	<p>Display the upper limit value of diagnostic information. If lower limit value > upper limit value then, it not displayed.</p>
Lower value	<p>Display the lower limit value of diagnostic information. If lower limit value > upper limit value then, it not displayed.</p>
Limited range	<p>Display the limit range by the upper limit value and lower limit value. If deterioration diagnosis function is enabled and the current value exceeds the limit range, diagnosis warning will be generated. If lower limit value > upper limit value then, it not displayed.</p>
Origin position	<p>Display the position of the current value = 0. It is not displayed when there is no 0 position within the drawing area.</p>

- Notes 1) Please refer to the manual of the driver or technical reference for details of each parameter's function and so on.
- Notes 2) Even if parameters are sent to the driver, parameters are turned to the original value before modification if the power supply of the driver is turned off without writing to EEPROM of the driver. Parameter modifications list are displayed on EEPROM writing. Please check the modification carefully.
- Notes 3) Do not turn off the power supply of the PC during writing to EEPROM of the driver. Data context cannot be guaranteed if the power supply is turned off during writing.
- Notes 4) The deterioration diagnosis screen cannot open during opening some screens. For more information please refer to page 239 "Deterioration diagnosis screen behavior".

RTEX Setup screen

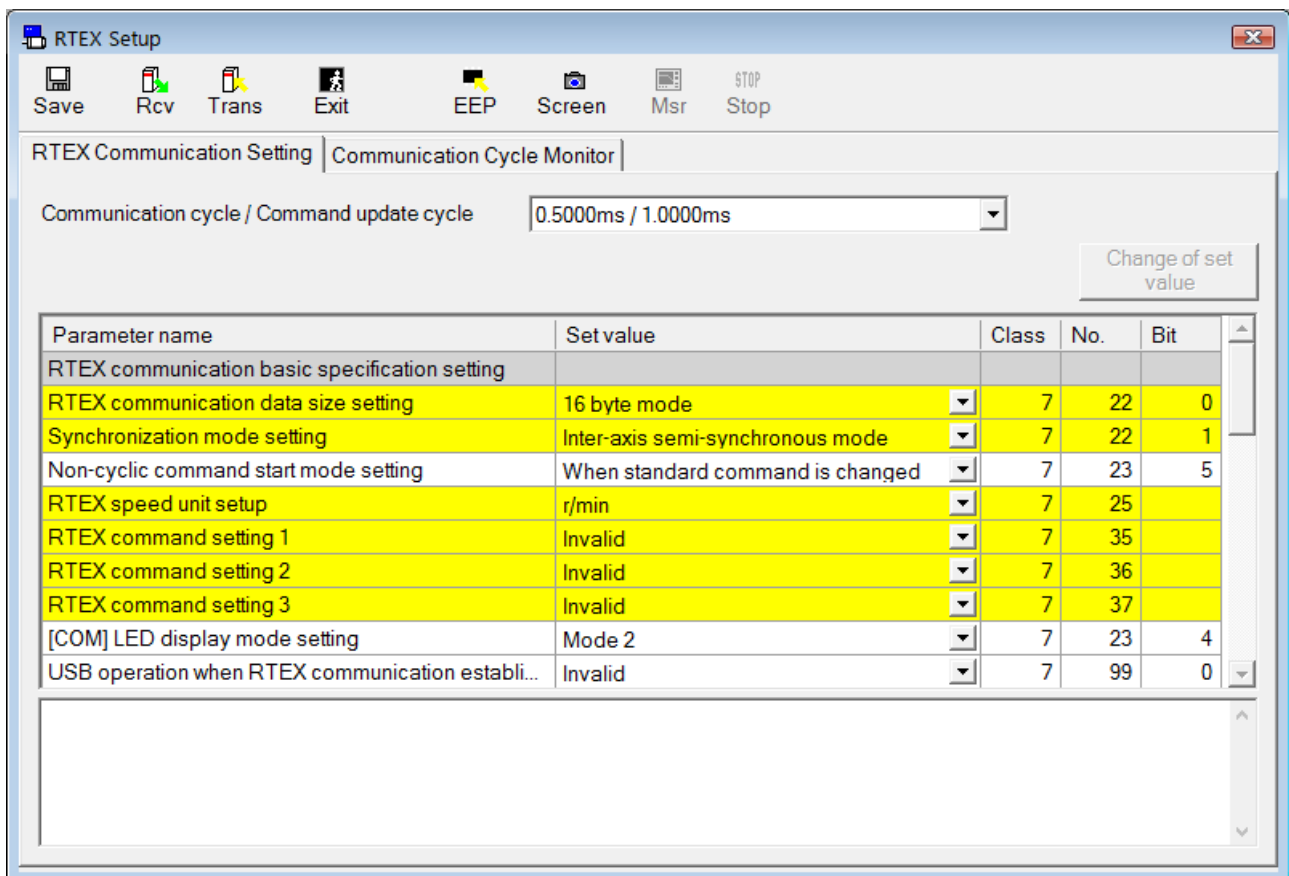

Set the RTEX communication between the driver and the host device.

Note) RTEX Setup cannot be performed through RS232 communication.

Open the RTEX Communication Setting window

- 1 Start "PANATERM".
(Please refer to Article 5. Start up and Close down in details)
- 2 Click "Other" > "RTEX Setup" of the tool bar on the main screen.
- 3 When not communicating with driver, the selection screen of a parameter is displayed. Please choose the parameter file to edit.
- 4 The RTEX Setup window is opened.

<When communication with driver>

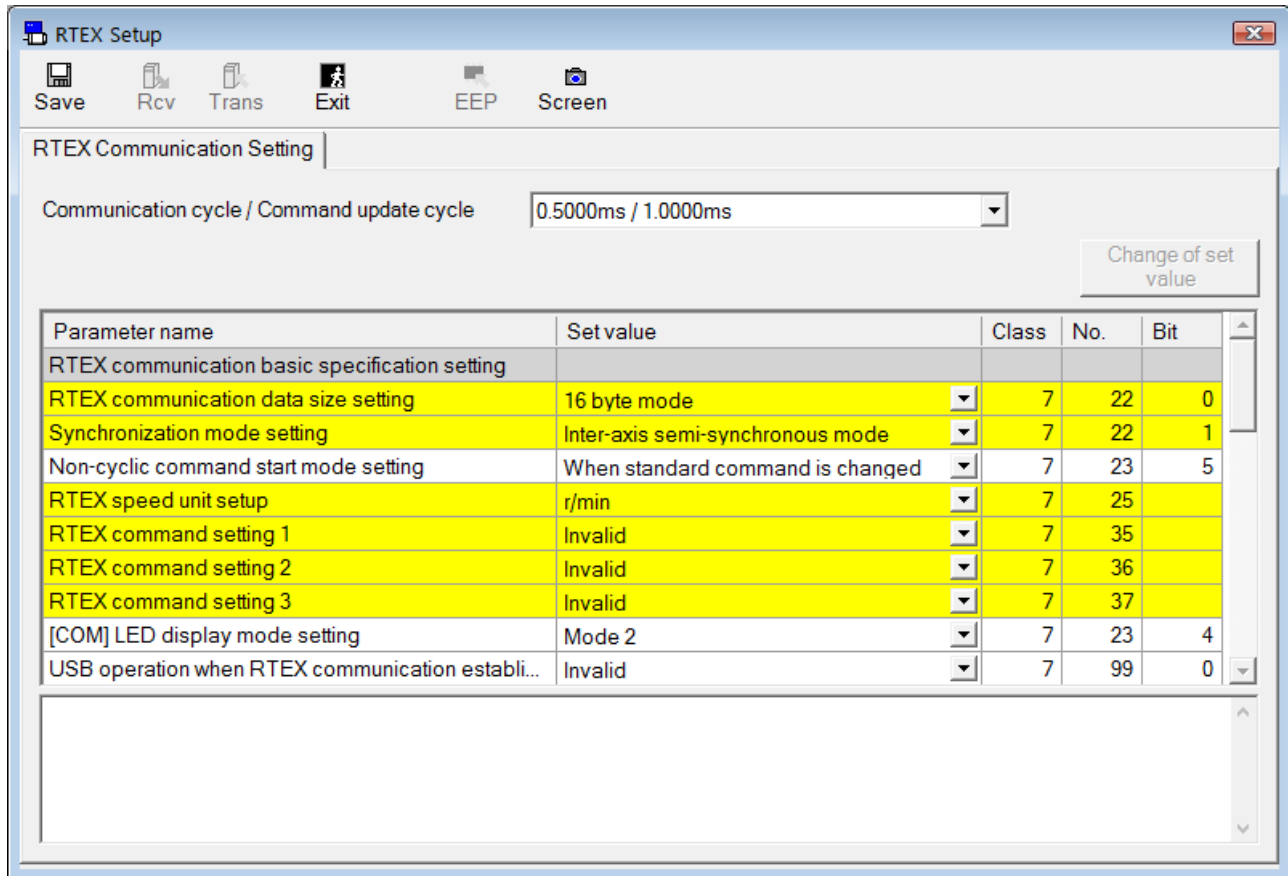

The screenshot shows the RTEX Setup window with the following elements:

- Toolbar: Save, Rcv, Trans, Exit, EEP, Screen, Msr, STOP, Stop
- Tab: RTEX Communication Setting | Communication Cycle Monitor
- Field: Communication cycle / Command update cycle (0.5000ms / 1.0000ms)
- Button: Change of set value
- Table of settings:

Parameter name	Set value	Class	No.	Bit
RTEX communication basic specification setting				
RTEX communication data size setting	16 byte mode	7	22	0
Synchronization mode setting	Inter-axis semi-synchronous mode	7	22	1
Non-cyclic command start mode setting	When standard command is changed	7	23	5
RTEX speed unit setup	r/min	7	25	
RTEX command setting 1	Invalid	7	35	
RTEX command setting 2	Invalid	7	36	
RTEX command setting 3	Invalid	7	37	
[COM] LED display mode setting	Mode 2	7	23	4
USB operation when RTEX communication establi...	Invalid	7	99	0

<When not communication with driver>

Close the RTEX Communication Setting window

Click  (Exit) on the tool bar.

Structure of RTEX Setup screen

RTEX Communication Setting

(1) Title bar

(2) Tool bar

(3) Tab

Parameter name	Set value	Class	No.	Bit
RTEX communication basic specification setting				
RTEX communication data size setting	16 byte mode	7	22	0
Synchronization mode setting	Inter-axis semi-synchronous mode	7	22	1
Non-cyclic command start mode setting	When standard command is changed	7	23	5
RTEX speed unit setup	r/min	7	25	
RTEX command setting 1	Invalid	7	35	
RTEX command setting 2	Invalid	7	36	
RTEX command setting 3	Invalid	7	37	
[COM] LED display mode setting	Mode 2	7	23	4
USB operation when RTEX communication establi...	Invalid	7	99	0

(4) Parameter setting field

(5) Text indication box

Communication Cycle Monitor

This is displayed when communication with driver only.

(6) Monitoring Contents display area

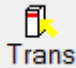

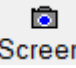

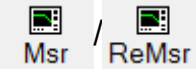

(1) Title bar You can operate this window.

(2) Tool bar

(Save)

Moves to the parameter screen.

	(Receive)	Receives parameters from the driver.
	(Transmit)	Sends parameters to the driver.
	(Exit)	Closes RTEK Setup screen.
	(EEPROM)	Write parameters to EEPROM of the driver.
	(Screen)	Capture the screen and record the file
	(Measurement)	Starts the communication cycle measurement/re-measurement.
	(Stop)	Stops the communication cycle measurement.

(3) Tab

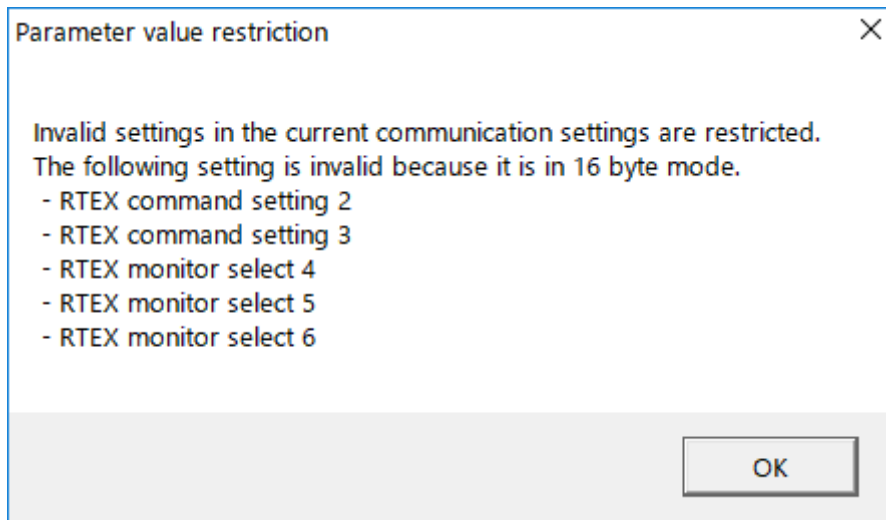

Switch the display of “RTEK Communication Setting” and “Communication Cycle Monitor”

(4) Parameter setting field

Editing and setting of parameters are available.

“Communication cycle / Command update cycle”	This parameter sets the communication cycle and the command update cycle of the driver. You can set the communication cycle and the command update cycle by changing this parameter.
“Parameter name”	Parameter names are indicated.
“Set value”	Parameter value. Its value can be modified. For a parameter value represented by a button, press the button to set the parameter. Parameters with  on the set values are set with the combo boxes. After selecting the values from the combo boxes, input the [ENTER] key or click  (modification of set value). Parameters without  on the set values, are inputted with the number keys directly, or modified clicking  and changing the values. To set the values, input the [ENTER] key or click  (modification of set value). If the [ESC] key is inputted, the value is return to the original one.
“Class”	Parameter classifications are indicated.
“No.”	Parameter numbers are indicated.
“Bit”	Displays the relevant bit.

- * When you are editing parameters, if there are parameter settings invalid for the current communication setting, the following dialog box appears with the reasons for restriction and the list of parameters.

(5) Text indication box

Explanations regarding selected parameters.

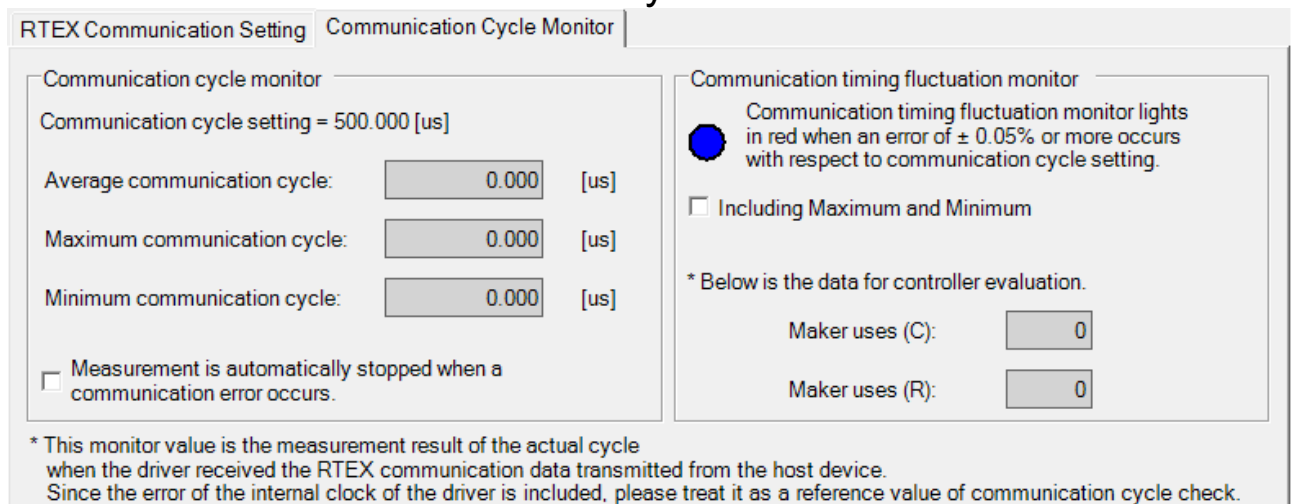

(6) Monitoring Contents display area

This area displays the real-cycle representation of the measurement results of the RTEX communication data that the driver received from the host device.

- * Use the values to check the communication intervals just for reference because they include internal clock errors of the driver.

How to monitor the communication status

1 Select a tab of “Communication Cycle Monitor”.

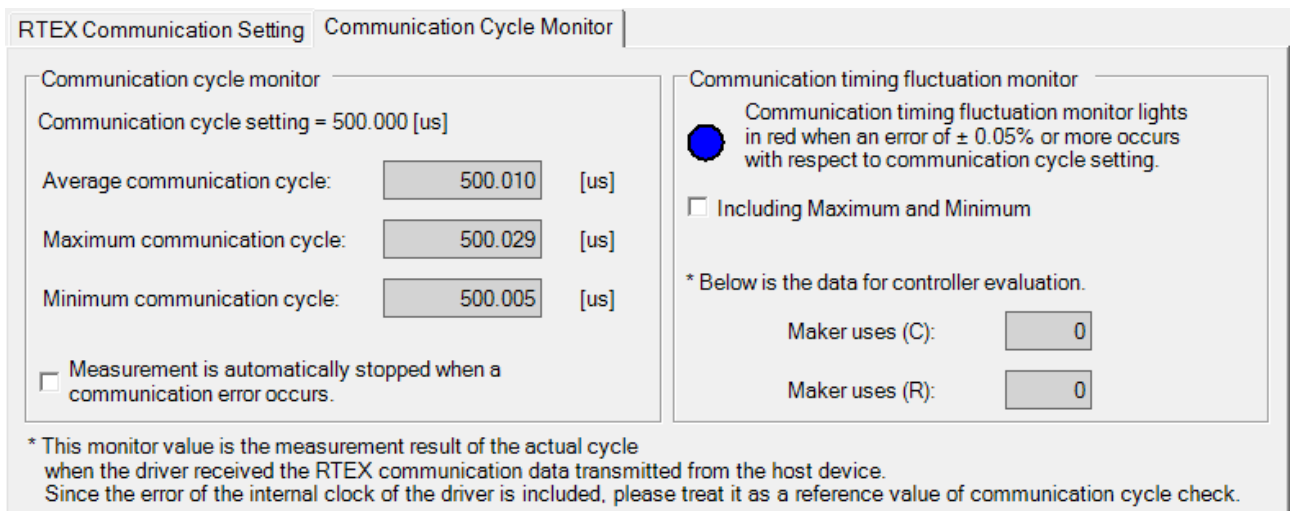

2 Click  (Measure) of the tool bar.

The content of the communication cycle monitoring area is updated when measurement starts.

The communication timing fluctuation monitor lights up in blue when the average communication cycle is within the valid range.

The communication timing fluctuation monitor lights up in red when it is not within the valid range.

RTEX Communication Setting | Communication Cycle Monitor

Communication cycle monitor

Communication cycle setting = 500.000 [us]

Average communication cycle: [us]

Maximum communication cycle: [us]

Minimum communication cycle: [us]

Measurement is automatically stopped when a communication error occurs.

Communication timing fluctuation monitor

 Communication timing fluctuation monitor lights in red when an error of $\pm 0.05\%$ or more occurs with respect to communication cycle setting.

Including Maximum and Minimum

* Below is the data for controller evaluation.

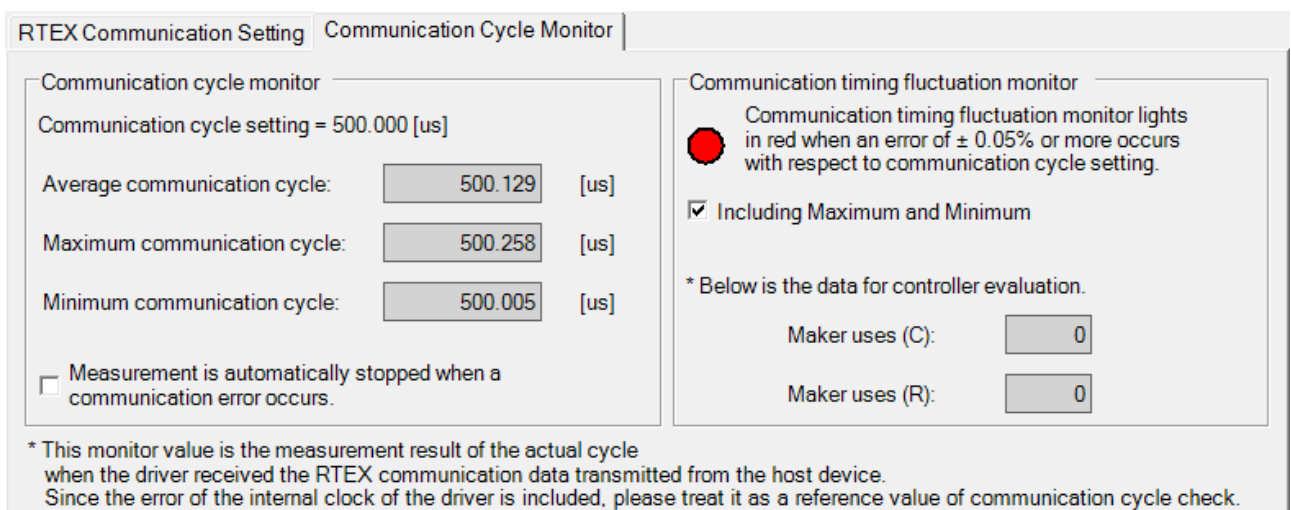

Maker uses (C):

Maker uses (R):

* This monitor value is the measurement result of the actual cycle when the driver received the RTEX communication data transmitted from the host device. Since the error of the internal clock of the driver is included, please treat it as a reference value of communication cycle check.

* If you want the communication monitoring to be automatically stopped in case of a communication error, select “Measurement is automatically stopped when a communication error occurs.”

Selecting “Including Maximum and Minimum” includes the maximum communication cycle and the minimum communication cycle as the decision criteria of the communication timing fluctuation monitor.

RTEX Communication Setting | Communication Cycle Monitor

Communication cycle monitor

Communication cycle setting = 500.000 [us]

Average communication cycle: [us]

Maximum communication cycle: [us]

Minimum communication cycle: [us]

Measurement is automatically stopped when a communication error occurs.

Communication timing fluctuation monitor

 Communication timing fluctuation monitor lights in red when an error of $\pm 0.05\%$ or more occurs with respect to communication cycle setting.

Including Maximum and Minimum

* Below is the data for controller evaluation.

Maker uses (C):

Maker uses (R):

* This monitor value is the measurement result of the actual cycle when the driver received the RTEX communication data transmitted from the host device. Since the error of the internal clock of the driver is included, please treat it as a reference value of communication cycle check.

- Notes 1) Please refer to the manual of the driver or technical reference for details of each parameter's function and so on.
- Notes 2) Even if parameters are sent to the driver, parameters are turned to the original value before modification if the power supply of the driver is turned off without writing to EEPROM of the driver. Parameter modifications list are displayed on EEPROM writing. Please check the modification carefully.
- Notes 3) Do not turn off the power supply of the PC during writing to EEPROM of the driver. Data context cannot be guaranteed if the power supply is turned off during writing.
- Notes 4) Some parameters become valid after modifications to the new data, writing EEPROM, and power supply reset. (On inputting, that issue is displayed. Please refer to the manual of the driver or technical reference and confirm on the objective parameters)
- Notes 5) The RTEX Setup screen cannot open during opening some screens. For more information please refer to page 239 "RTEX Setup screen behavior".

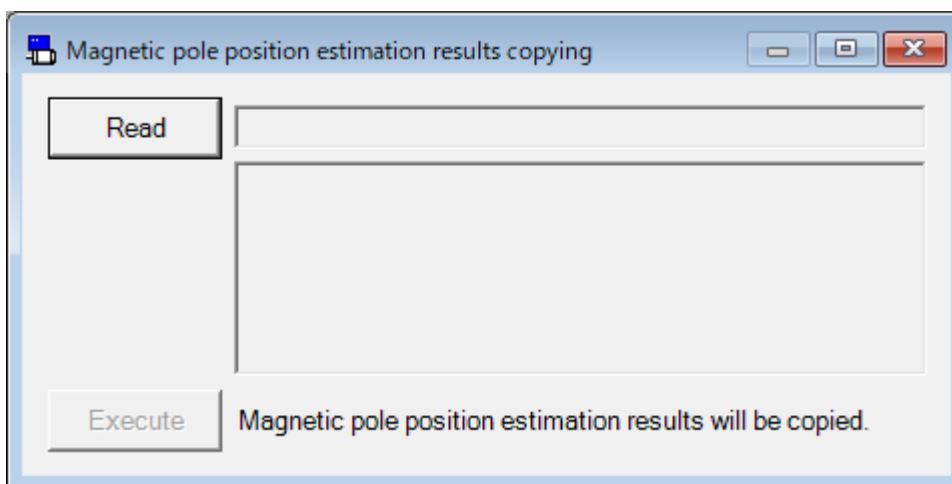

Magnetic pole position estimation results copying screen

Set the magnetic pole position estimation results based on the parameter file.

Note) Magnetic pole position estimation results copying function is assumed to exchange only driver without changing the combination of linear motor and feedback scale.
Make sure that the copy source and copy destination driver are the same device.
Otherwise the magnetic pole position will be shifted, motor cannot be controlled normally.
Magnetic pole position estimation results copying cannot be performed through RS232 communication.

Open the Magnetic pole position estimation results copying window

- 1 Start "PANATERM".
(Please refer to Article 5. Start up and Close down in details)
- 2 Click "Other" > "Magnetic pole position estimation results copying" of the tool bar on the main screen.
- 3 The Magnetic pole position estimation results copying window is opened.

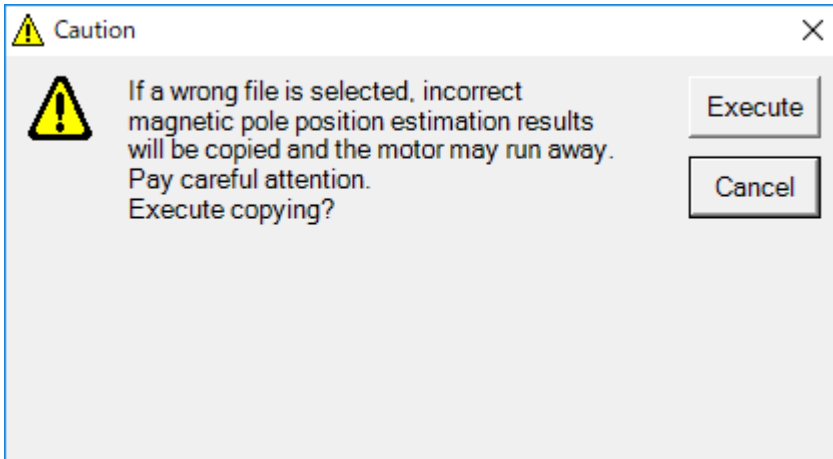

Close the Magnetic pole position estimation results copying window

Click  of upright on the window

Magnetic pole position estimation results copying is executed

- 1 Click “Read” button.
- 2 Select the copy source parameter file.
- 3 Click “Execute” button.
- 4 Caution windows will appear. Confirm the window message carefully, and click “Execute”.

Notes 1) The Magnetic pole position estimation results copying screen cannot open during opening some screens. For more information please refer to page 240 “Magnetic pole position estimation results copying screen”.

7. Trouble shooting

Set up

Stop setup

- Please review the system requirements, and make sure that the computer fulfils the required condition. Please especially note the Operation system's service package.
- If there is a problem installing the Microsoft .NET Framework, then stop PANATERM's installation, install Microsoft.NET Framework directly from Microsoft homepage, and then try re - installing PANATERM.
- If the installation of Microsoft Visual C++ 2013 Redistributable(x86) fails, stop the installation of PANATERM and install Microsoft Visual C++ 2013 Redistributable(x86) in your computer directly from the Microsoft website, and then start the PANATERM installer again.
- If the installation of Microsoft Access Database Engine fails, stop the installation of PANATERM and install Microsoft Access Database Engine 2010 in your computer directly from the Microsoft website, and then start the PANATERM installer again.
- As a result of download failure, there is a possibility that the installer has broken. Please download again after clearing cash of a browser.

Communication

Drive name does not appear on the USB connection window after starting up PANATERM.
→Control electricity of the Drive may not be activated.
→Connection of USB communication cable may be loose, the cable itself may be damaged, or the correct cable may not be used.
→Confirm that the wireless LAN dongle is inserted correctly, the wireless router is running, and the wireless router recognizes the wireless LAN dongle.
→USB port of PC may not be functioning standardly. Please confirm this by the operating manual of the PC.
→Confirm that the network setting of your computer is correct and functioning normally. (Refer to the operation manual of your computer.)
→USB driver may not be installed correctly.
→Check the Wireless LAN / Driver information set-up screen to confirm that the wireless communication setting is correct.
→If DHCP is enabled on the Wireless LAN / Driver information set-up screen, there may not be enough IP addresses allocated by the DHCP server. Disable DHCP and make a static allocation, or secure an available IP address.
→A drive name is not displayed when using RS232 communication.

“Cannot detect the communication port or the drive.” is displayed and it cannot communicate.
→Control electricity of the Drive may not be activated.
→Connection of cable may be loose, the cable itself may be damaged, or the correct cable may not be used.
→Confirm that the wireless LAN dongle is inserted correctly, the wireless router is running, and the wireless router recognizes the wireless LAN dongle.
→Communication port (USB or COM port) of PC may not be functioning standardly. Please confirm this by the operating manual of the PC.
→Confirm that the network setting of your computer is correct and functioning normally. (Refer to the operation manual of your computer.)
→Driver may not be installed correctly.
→RS232 communication cannot be used at the same time as the block operation function. Make sure that the block operation function is disabled.
→RS232 communication is only available with the MINAS standard protocol.

Printing

Cannot print.

→Printer may not be connected properly, or printer driver may not be functioning properly. This can be confirmed by printing the test page.

→Document size may not be configured correctly. PANATERM can be printed only to the size of A4 or Letter size. Please confirm the printer property of PC.

→Letter per row may be too much. If this is the case, then please separate the row into multiple rows to decrease down the letter per row down to the level where the entire row will appear when printed.

Uninstall

Unable to uninstall PANATERM

→File created not by PANATERM may be included in the same folder where PANATERM data file is included, In this case, the files will be protected, and uninstall cannot be completed.

Axis address

The number of the connected driver and the number of the driver checked by search are not in agreement.

→Please check that the axis address (ID) of the driver linked to a PC is 0. Moreover, please check whether the axis address (ID) of other driver overlaps in 1 to 31.

→Connection of cable may be loose, the cable itself may be damaged, or the correct cable may not be used.

PANATERM behavior

Response of PANATERM is slow. Operation is slow.

→Close window that are not in use. All windows that are hiding behind active windows are still active and are communicating with the Drive periodically.

→Other equipment may be connected to USB. If so, then please lighten the load for USB connection by e.g. stop the other equipment's operation.

→If there is any device that interferes the communication between the computer, wireless router, and the driver, stabilize the communication by, for example, temporarily stopping the device.

→When RS232 communication is used, please raise the transmission speed of a COM port.

Window is out of the screen, and is hard to see.

→Size of screen may not be configured properly. Please configure the screen size larger than 1,024 x 768.

Cannot open window. Display of the icon is strange.

→Memory may be lacking. Please close down PANATERM, other applications that are not in use, and/or reboot the PC, and then start up the PANATERM again.

PANATERM is not reacting anymore

→Close down PANATERM by pressing [CTRL]+[ALT]+[DEL] keys

→The error dialog may be displayed on the back of the PANATERM screen. Press the [ALT]+[TAB] keys and select the error dialog.

PANATERM had closed down suddenly

→Start up the PANATERM again.

Cannot start PANATERM

→It has failed to install .NET Framework. Install .NET Framework 3.5 SP1 directly from Microsoft homepage, and then try re - installing PANATERM.

→When installing to the Program Files folder, it has failed series definition setting. Please re - install PANATERM after remove of the following folder.
[System Drive]:Users\[User Name]\AppData\Local\VirtualStore\Program Files\Panasonic Corporation\MINAS\PANATERM\ini\def

→If Windows update for November 2017 has not been executed, it may become impossible to start up the system. Refer to Microsoft website and execute Windows Update, then restart PANATERM.

Parameter screen behavior

Cannot open the parameter screen

→The parameter screen cannot be opened simultaneously with the gain tuning screen, the pin assign setting screen, the setup wizard, the fit gain screen (Standard), the fit gain screen (2 degrees of freedom control), the object editor screen, the block operation editor screen, the deterioration diagnosis screen, the RTEX setup screen, and the magnetic pole position estimation results copying screen. Please close these screens first.

Parameter value returns back to the original

→Procedure to change parameter may not have been completed. This may happen if you select other parameter or switch windows without pressing [ENTER] key or “Change of set value” button.
Please make sure of your operations.

→If the parameter value is read from the file, changed parameters are not sent to the driver. If you want to send then please click the “Trans” button.

Changed parameter after EEPROM over write does not match to the change

→Parameter may be changed by other windows that will change parameter.
Please click “Rcv” button to update the parameter value.

The explanation of parameter is unkind. Cannot you display it in detail?

→Please double-click the item with underline on the left sub-themes tree.
Related to the page of the operation manual of driver is displayed.

→Please check on “Display - Set value description” on the lower right of the screen. Information according to each value is displayed.
Or else value with decimal point is displayed.

Monitor screen behavior

Cannot open the monitor screen

→The monitor screen cannot be opened simultaneously with the pin assign setting screen, the setup wizard and the RTEX setup screen. Please close these screens first.

Monitor screen does not change

→Stop button may be clicked. If condition indicated on upper left corner states "Monitor stopped" then click the "Start" button on toolbar.

→Communication with the drive may be severed and may be off line. Please confirm if the unconnected mark is on the left side of status bar at the lowest portion of PANATERM screen.

Log cannot be saved

→Log cannot be saved if the drive is in Input / Output confirm mode. Please retry after turning the drive back to standard condition e.g. reset drive, reboot drive.

In a digital input / output signal monitor, although a count does not change, a waveform changes

→When the processing speed of PC is slow, High data may be drawn with Low data. Please lengthen the communication interval of driver and PC.

Cannot display a digital input / output signal monitor

→When you use RS232 communication with the communication speed of less than 4800 bps, please do not make a monitor cycle into 1 second.

→A background may become white, without drawing meeting the deadline when the processing speed of PC is slow. Please lengthen the communication interval of driver and PC.

Cannot do Forced Output and Drive reset.

→In the case of network type (MINAS-A5N, MINAS-A5NL, etc.), if a network is established, it cannot do Forced Output and Drive reset. Please retry after making the network unestablished.

Alarm screen behavior

Cannot open the alarm screen

→The alarm screen cannot be opened simultaneously with the pin assign setting screen, the setup wizard and the RTEX setup screen. Please close these screens first.

Error log does not appear

→When error has never occurred or if the log has been cleared once, the error log will not appear.

→Additional information that appears on lower left portion only contains error that occurred 1 time to 3 times before. If additional information for older error is needed, then please select error log number at the upper left portion of window.

→Errors that were not presumed will not leave log even the error occurred. In this case, the log will not be kept, and therefore will not appear.

Gain tuning screen behavior

Cannot open the gain tuning screen

→The gain tuning screen cannot be opened simultaneously with the parameter screen, the pin assign setting screen, the setup wizard, the fit gain screen (Standard), the fit gain screen (2 degrees of freedom control), the object editor screen, the block operation editor screen, the deterioration diagnosis screen the RTEX setup screen and the magnetic pole position estimation results copying screen. Please close these screens first.

→The gain tuning screen cannot be displayed communication with the driver is severed. Please confirm if the unconnected mark is on the left side of status bar at the lowest portion of PANATERM screen.

Automatic resonance suppression function does not activate effectively

→When mode 1 to 4 is selected for Real time auto tuning; automatic resonance suppression function will be active. Please configure the resonance detection level with reviewing the peak value of vibration by the monitor measurement, and put check on the checkbox.

Assumes value of load characteristics does not change

→Mode of real time auto tuning is "0", or least - squares estimation of customize setting is invalid. Please select mode between 1 and 5, or valid the least - squares estimation at customize setting.

→If characteristics variation is set as "0: No Change" then the load characteristics estimation is stopped. Please set a value from 1 to 3.

Resonance frequency appears as default value 5,000Hz

→When resonance level is small, or does not continue for long time, and then the resonance frequency may not change from 5,000Hz. Please use the graphic wave function to read resonance frequency directly from motor speed or torque command wave, and set notch filter.

Resonance frequency appears as default value 0.0Hz

→When resonance level is small or does not continue for long time, resonance frequency may not appear changed. Please use wave graphic function to set resonance suppression control setting by measuring position deviation to read resonance frequency directly.

Cannot use clear button of resonance suppression setting

→Please click “edit” button of the applicable window. When setting/clear button is clocked, the changed setting value will be transmitted to the drive automatically.

Simplified monitor does not update

→When drive Servo is OFF, measurement will stop also. Please turn ON the Servo and click “Start measurement” button again.

→Simplified monitor will stop when test run No. reaches the measurement number. When you need to continue the measurement, then please click on the “Start measurement” button again.

Parameter cannot be set manually

→Please click on the “edit” button to enable editing. Also, please click on the “Send” button to write the parameter to drive value when after the parameter was changed.

Wave form graphic screen behavior

Cannot open the wave form graphic screen

→The wave form graphic screen cannot be opened simultaneously with the pin assign setting screen, the setup wizard and the RTEX setup screen. Please close these screens first.

Wave data does not appear

→Trigger condition may not be satisfied. Please confirm trigger condition, or click on measure button with no trigger condition. However, if measurement is done without trigger condition is done, and then portion of measurement condition will be cleared. Also, please be noted that trigger will not be active if both sub condition is not satisfied when trigger condition is "A and B".

Reference wave does not appear

→Referential wave will not appear even when the "Copy" button is clicked. Please put a check in the checkbox to the referential wave you would like to see on screen at the "Format" tab on lower portion.

→When copied referential wave data exceeds 10 data, then the newly copied wave data will be over written to the referenced previous 20 data. Please delete the unnecessary reference wave data to make the data number within 10 data.

Wave graphic data cannot be selected

→Please select one of the measurement items inside the measurement item tab's measurement condition, and open the measurement item selection window.

Digital data cannot be triggered

→When digital data is selected at applicable trigger, then use at either trigger slope being "Matched" or "Unmatched".

The P-N voltage is not triggered. Or an unintended trigger is triggered.

→In the case of the M-frame driver, the trigger may not be activated as expected because the PN voltage is handled as a decimal number inside the driver. In that case, do not use the trigger slope match or mismatch, and adjust the trigger level by 1V.

Wave data does not appear even "W-get" button is clicked

→Trigger condition of drive may not be satisfied or configured. Please reconfirm trigger condition by clicking the "T-Get" button, with confirming that the actual operation is satisfying the trigger condition.

A trigger position shifts

→In the case of network type (MINAS-A5N, MINAS-A5NL, etc.), if a network is established in the state of trigger standby, the detected trigger position may shift.

The waveform graphic cannot be loaded.

→Data for expanded sampling cycles (extension: wgd6, wgc6, and wgp6) cannot be loaded if the connected device or the selected series does not support the expanded function. Try loading it again after connecting a device or selecting a series that supports the expanded function.

Trial run screen behavior

Cannot open the trial run screen

→The trial run screen cannot be opened simultaneously with the pin assign setting screen, the Z phase search screen, the setup wizard, the fit gain screen (2 degrees of freedom control) the RTEX setup screen, and the magnetic pole position estimation results copying screen. Please close these screens first.

→Drive is not in ready status (Alarm or Main power source is cut off), front panel is used except for monitor mode, network is established, or Servo ON is input from outside. Please re - execute after these status is eliminated, and the trial run screen is closed.

→The trial run screen cannot be displayed communication with the driver is severed. Please confirm if the unconnected mark is on the left side of status bar at the lowest portion of PANATERM screen.

Error happens frequently

→At the operation area setting window, the drive will automatically set the safety function to default setting; Over speed level 600r/min, Over load level 50%, Software limit setting 1 revolution. Please try with tuning the gain, changing operation command, and/or changing protection function on operation area setting window.

→The setting of the speed exceeds the maximum speed of the motor. Please set the speed below maximum speed of the motor.

Operation will stop shortly

→The JOG or STEP button at operation area setting window, or JOG button (un - continuous) at Test operation window will operate the motor when only during the button is clicked.

→If motion at step operation is smaller than expected and then please understand that this setting is set by command times, and therefore the motor rotation operation will vary by electrical gear ratio. Please change the setting.

→If limitation of operation area at test operation window is the issue, then please moves to test operation window by skip button if operation limit is not needed, or return to the operation area setting window to reconfigure the operation area.

→A working range cannot be set up more than the range of -1,073,741,823 to 1,073,741,823.

Operation doesn't reach at the speed

→The acceleration is limited 10,000 to 327,670,000. Please set it within the range, referring to the following equations.

[Position Control]

$$\text{Acceleration [command unit/s}^2\text{]} = \frac{\text{Speed [r/min]} / 60 \times \text{encoder resolution}}{\text{Electronic gear ratio} / \text{Acceleration time [s]}}$$

[Full close control]

$$\text{Acceleration [command unit/s}^2\text{]} = \frac{\text{Speed [r/min]} / 60 \times \text{encoder resolution}}{\text{External scale frequency division ratio} / \text{Electronic gear ratio} / \text{Acceleration time [s]}}$$

[Linear motor]

$$\text{Acceleration [command unit/s}^2\text{]} = \frac{(\text{Speed [mm/s]} \times \text{scale resolution}) \times 10^6}{\text{Electronic gear ratio} / \text{Acceleration time [s]}}$$

Frequency characteristics screen behavior

Cannot open the frequency characteristics screen

→The frequency characteristics screen cannot be opened simultaneously with the pin assign setting screen, the setup wizard, the fit gain screen (Standard), the fit gain screen (2 degrees of freedom control) and the RTEX setup screen. Please close these screens first.

Cannot measure frequency response. The result of measurement is wrong.

→The servo on input is necessary. Please confirm the motor is in the state of servo on.

→No condition that the motor works standard it, it is not likely to be able to measure it well. Please confirm a torque limitation and driving prohibition the functions etc.

→The frequency response measurement result changes greatly depending on the measurement condition. Please measure it when you measure the speed closed-loop characteristic on the condition that the motor doesn't stop as amplitude = offset absolute value though range of motion is noted. Moreover, please measure the amplitude setting from a small value as much as possible for the first time within the range where the torque saturation is not generated, and affects the equipment negatively by a big setting.

→When a nonlinear characteristic like the backlash and the dead-band, etc. exists in the equipment, it is likely not to become a value that changes the resonance frequency, and is correct by the amplitude setting and the offset setting.

→In the case of network type (MINAS-A5N, MINAS-A5NL, etc.), if a network is established, it cannot measure frequency response. Please retry after making the network unestablished.

Frequency response cannot analyze.

→Analysis can be used when driver and a communication state are being continued after measurement by "Torque speed" mode.

→This cannot analyze, when using RS232 communication.

→Analysis after frequency characteristic measurement cannot be used with the MINAS-A6 series.

Pin assign setting screen behavior

Cannot open the pin assign setting screen

→The pin assign setting screen cannot be opened simultaneously with all other screens. Please close all other screens first.

The setting change of the pin assign screen is not reflected in the driver operation.

→It is necessary to reset the driver. Please turn it on again after turning off the control source of the driver once.

→In the case of network type (MINAS-A5N, MINAS-A5NL, etc.), if a network is established, the change of the pin assign setting is not reflected. Please retry after making the network unestablished.

Trouble shooting screen behavior

Cannot open the trouble shooting screen

→The trouble shooting screen cannot be opened simultaneously with the pin assign setting screen, the setup wizard and the RTEX setup screen. Please close these screens first.

The factor that doesn't rotate doesn't occasionally disappear.

→Please execute it in order with young number when you do measures because another factor might be generated by a certain factor.

The content of the longevity diagnosis might return to the origin.

→Longevity information is recorded only every 30 minutes. Please confirm time that the control source of the driver is energized.

The Communication error tab is not displayed.

→The Communication error tab is displayed only when the connected driver is of a network type that supports the monitoring of the RTEX communication error counter (MINAS-A6NF, etc.).

Analogue input adjustment screen behavior

Cannot open the analogue input adjustment screen

→The analogue input adjustment screen cannot be opened simultaneously with the pin assign setting screen, the setup wizard the RTEX setup screen and the magnetic pole position estimation results copying screen. Please close these screens first.

→The analogue input adjustment screen cannot be displayed communication with the driver is severed. Please confirm if the unconnected mark is on the left side of status bar at the lowest portion of PANATERM screen.

The offset self-adjustment function is not effective.

→There is a possibility for the input voltage to have exceeded the range of the offset adjustment. Please confirm the analog input voltage display of a monitor screen and a driver front panel. Whether the input voltage is in about 0V or actually measures it.

After the function the offset self-adjustment, the parameter is written in EEPROM

→After the offset self-adjustment function is executed thoroughly to a front panel of the driver, the offset parameter is automatically written in EEPROM.

Z phase search screen behavior

Cannot open the Z phase search screen

- The Z phase search screen cannot be opened simultaneously with the trial run screen, the pin assign setting screen, the setup wizard, the fit gain screen (2 degrees of freedom control) the RTEX setup screen and the magnetic pole position estimation results copying screen. Please close these screens first.
- Drive is not in ready status (Alarm or Main power source is cut off), front panel is used except for monitor mode, network is established, or Servo ON is input from outside. Please re - execute after these status is eliminated, and the Z phase search screen is closed.
- The Z phase search screen cannot be displayed communication with the driver is severed. Please confirm if the unconnected mark is on the left side of status bar at the lowest portion of PANATERM screen.

When the power supply of the driver is turned on, the numerical value at the center is not changed as -1.

- Because single-turn data is not decided until the first Z phase is detected when the motor equipped with the encoder of an incremental type is used, the display becomes -1. The numerical value at the center comes to take a value nonnegative from 0 to single-turn data maximum value by executing Z phase search.

Setup wizard behavior

Cannot open the setup wizard

- The Setup Wizard window cannot be used when Servo is turned ON by input from outside. Please confirm the motor is in the state of servo off.
- The setup wizard cannot be opened simultaneously with all other screens. Please close all other screens first.

The setting change of the setup wizard is not reflected in the driver operation.

- It is necessary to reset the driver. Writing to EEPROM after, please turn it on again after turning off the control source of the driver once.

Fit gain screen (Standard) behavior

Cannot open the fit gain screen

→The fit gain screen (Standard) cannot be opened simultaneously with the parameter screen, the gain tuning screen, the frequency characteristics screen, the pin assign setting screen, the setup wizard, the object editor screen, the block operation editor screen, the deterioration diagnosis screen, the RTEX setup screen and the magnetic pole position estimation results copying screen. Please close these screens first.

→The fit gain screen (Standard) cannot be used velocity control mode and torque control mode.

→The fit gain screen (Standard) cannot be displayed except the case of communication with the driver. Please confirm if the unconnected mark is on the left side of status bar at the lowest portion of PANATERM screen.

Proceed to Step 3

→Please change the driving pattern according to the instructions.

→Please check behavior of real-time auto-tuning on the gain tuning screen.

→Please check behavior of easy monitor on the gain tuning screen.

→Try increasing Initial rigidity on the Other setting of Step 1. Or else try decreasing it.

→Try increasing Permissible vibration level on the Other setting of Step 1. Or else try decreasing it.

Ranking is not displayed in Step 4

→There is no data that satisfies the restrictions determined by the "Recommendation". Please review the "Recommendation" and Recommendation setting.

→There is no data below the Target value of stabilization time. Please increase the Target value of stabilization time.

→It may exist in the Recommendation data below Initial rigidity. After returning to Step 1, please decrease Initial rigidity on the Other setting to measure again.

Fit gain screen (2 degrees of freedom control) behavior

Cannot open the fit gain screen (2 degrees of freedom control)

- The fit gain screen (2 degree of freedom control compatible) cannot be opened simultaneously with the parameter screen, the gain tuning screen, the trial run screen, the frequency characteristics screen, the pin assign setting screen, the Z phase search screen, the setup wizard, the object editor screen, the block operation editor screen, the deterioration diagnosis screen the RTEK setup screen and the magnetic pole position estimation results copying screen. Please close these screens first.
- The fit gain screen (2 degrees of freedom control) cannot be used velocity control mode, torque control mode and full close control mode.
- The fit gain screen (2 degrees of freedom control) can be displayed only when the combination of driver and selected series is correct.
- The fit gain screen (2 degrees of freedom control) is supported only linear type (LINEAR) when the driver is Linear and DD Control Drive (MINAS-A6BL etc.). Rotary type (DD) is not supported.

Cannot open the log on of fit gain screen

- The log on of fit gain screen cannot be displayed except the case of communication with the driver. Please confirm if the unconnected mark is on the left side of status bar at the lowest portion of PANATERM screen.
- The log on of fit gain screen can be displayed only when driver have 2 degrees of freedom control (MINAS-A5II, MINAS-A6 etc.).

Proceed to Step 3

- Please check the load condition.
- If the driver is Linear and DD Control Drive, please review the parameter settings of motor inertia (Mass of motor's movable section), Rated motor torque (Rated motor thrust).
- Try increasing Initial rigidity on the Machine setting of Step 1. Or else try decreasing it.
- Please change the Mode setting of Step 1 to Balanced or Stability preferentially. Or else try decreasing it.

Object editor screen behavior

Cannot open the object editor screen

→The object editor screen cannot be opened simultaneously with the parameter screen, the gain tuning screen, the pin assign setting screen, the setup wizard, the fit gain screen (Standard) and the fit gain screen (2 degrees of freedom control), the block operation monitor screen, the block operation editor screen, the deterioration diagnosis screen the RTEX setup screen and the magnetic pole position estimation results copying screen. Please close these screens first.

→Object editor screen can be displayed only if the series with uses the EtherCAT Communication is selected.
(Example)MINAS-A5B

Cannot transmit and edit object value

→Please check that “ESM Condition” is “INIT” and  is displayed at the next to the “Change of set value” button.

→Please check object attribute is RW at column of “Attrib”.

Object value returns back to original

→Procedure to change object may not have been completed. This may happen if you select other object or switch windows without pressing [ENTER] key or “Change of set value” button. Please make sure of your operations.

→If the object value is read from the file, changed objects are not sent to the driver. If you want to send then please click the “Trans” button.

Changed object after EEPROM over write does not match to the change

→The object may be changed by other windows that will change parameter. Please click “Rcv” button to update the object value.

→The some of the objects may not displayed in the Writing to EEPROM screen if you change.

→The some of the objects may be changed in conjunction. These objects will be applied last changes.

Battery refresh screen behavior

Cannot open the battery refresh screen

- The battery refresh screen cannot be opened simultaneously with the pin assign setting screen, the setup wizard screen and the RTEX setup screen. Please close these screens first.
- The battery refresh screen cannot be displayed communication with the driver is severed. Please confirm if the unconnected mark is on the left side of status bar at the lowest portion of PANATERM screen.

Cannot execute the battery refresh.

- Battery refresh can be executed in the case of a combination of control mode and the encoder that support.
- When the block operation function is enabled then, battery refresh cannot execute.

Block operation editor screen behavior

Cannot open the block operation editor screen

- The block operation editor screen cannot be opened simultaneously with the parameter screen, the gain tuning screen, the pin assign setting screen, the setup wizard, the fit gain screen (Standard), the fit gain screen (2 degrees of freedom control), the object editor screen, the deterioration diagnosis screen the RTEX setup screen and the magnetic pole position estimation results copying screen. Please close these screens first.
- When the block operation function is disabled then, the block operation editor screen cannot be opened. Please check of your parameter setting.

Parameter value returns back to the original

- Procedure to change parameter may not have been completed. This may happen if you select other parameter or switch windows without pressing [ENTER] key. Please make sure of your operations.
- If the parameter value is read from the file, changed parameters are not sent to the driver. If you want to send then please click the "Trans" button.

Changed parameter after EEPROM over write does not match to the change

- Parameter may be changed by other windows that will change parameter. Please click "Rcv" button to update the parameter value.

Block operation monitor screen behavior

Cannot open the block operation monitor screen

- The block operation monitor screen cannot be opened simultaneously with the pin assign setting screen, the setup wizard screen, the object editor screen and the RTEX setup screen. Please close these screens first.
- The block operation monitor screen cannot be displayed communication with the driver is severed. Please confirm if the unconnected mark is on the left side of status bar at the lowest portion of PANATERM screen.

Deterioration diagnosis screen behavior

Cannot open the deterioration diagnosis screen

- The deterioration diagnosis screen cannot be opened simultaneously with the parameter screen, the gain tuning screen, the pin assign setting screen, the setup wizard screen, the fit gain screen (Standard), the fit gain screen (2 degrees of freedom control), the object editor screen, the block operation editor screen, the RTEX setup screen and the magnetic pole position estimation results copying screen. Please close these screens first.
- The deterioration diagnosis screen cannot be displayed communication with the driver is severed. Please confirm if the unconnected mark is on the left side of status bar at the lowest portion of PANATERM screen.

RTEX Setup screen behavior

Cannot open the RTEX setup screen

- The RTEX setup screen cannot be opened simultaneously with all other screens. Please close all other screens first.

Magnetic pole position estimation results copying screen behavior

Cannot open the Magnetic pole position estimation results copying screen.

→The magnetic pole position estimation results copying screen cannot be opened simultaneously with the parameter screen, the gain tuning screen, the trial run screen, the pin assign setting screen, the analogue input adjustment screen, the Z phase search screen, the setup wizard, the fit gain screen (Standard), the fit gain screen (2 degrees of freedom control), the object editor screen, the block operation editor screen, the deterioration diagnosis screen and the RTEK setup screen. Please close these screens first.

→The magnetic pole position estimation results copying screen cannot be displayed communication with the driver is severed. Please confirm if the unconnected mark is on the left side of status bar at the lowest portion of PANATERM screen.

Post-sale service

Queries

- **Contact point for customer technical assistance**
<For questions on how to select and use motors and drivers>
Toll free: 0120-70-3799
(The toll free number cannot be called from a smartphone, mobile phone, and some IP phones.)
Tel: 072-870-3057
Fax: 072-870-3120
Open: Monday to Friday, 9:00–12:00
13:00–17:00
(Public holidays and company holidays excluded)
- **Contact point for repairs**
<For requests for the repair service and questions on how to obtain spare parts>
Tel: 072-870-3123
Fax: 072-870-3152
Open: Monday to Friday, 9:00–12:00
13:00–17:00
(Public holidays and company holidays excluded)

Industrial Device Business Division, Panasonic Corporation
Tokyo: Toranomom 35 Mori Building, Toranomom 3-4-10, Minato-ku, Tokyo 105-0001
