TTM-200 brief operation manual

Thank you for purchasing our TTM-200. Please thoroughly read this manual.

This manual is a brief version of the operation manual. Please refer to the full version of the operation manual for details. (Payment will incur) Cautions

For safety purpose, following symbols are used in this manual. The case that a user may receive fatal damage, electric shock, or severe burn Δ Warning njury when the product is incorrectly used he case that a user may receive minor damage or the equipment may get Caution amane Verify correct wiring before turning on electricity since incorrect wiring may cause an equipment ailure or a fire. Modification of this equipment may cause malfunctioning or a fire. Do not add /!\ Warning nodification on this equipment. If the equipment is used in a manner not specified by the nanufacturer, the protection provided by the equipment may be impaired. Wiring: Do not use empty terminals for irrelevant purposes. Λ Caution peration: Do not use a sharp-pointed tool for operating keys

- Hand over this operation manual to a person who actually operates the product.

- Do not reprint or duplicate this manual without permission.

- Content of this manual may be subject to modification without prior notice.

Verification of the product

1) Verification of the model: Refer the model name printed in the packing box to the order sheet. 2) Verification of accessories: Mounting attachment and this manual

Environmental condition

(1) Service temperature/humidity range: 0-50 °C, 20-90 % RH (no dew condensation)

- (2) Storage temperature/humidity range: -20-70 °C (no freezing or dew condensation), 5-95 % RH (no dew condensation) (3) Equipment environment: 1) No corrosive gases, dust, and oil
 - 2) As far away as possible from an electric noise source, and little effect from electromagnetic 3) As few as possible with mechanical vibrations or impacts
 - 4) No direct sunlight

5) Installation(overvoltage) category II /Pollution Degree 2

6) Indoor use / Altitude up to 2000m

7) Mains supply voltage fluctuations not to exceed ± 10 percent of the nominal voltage

Prior to control operation

- Non-volatile memory is used for storing settings, which stays in the storage even when the power is cut.

- Input form can be switched (Thermocouple, temperature measuring resistor, voltage, and current). Match the selected input form with input setting on the product.

- PID control and ON/OFF control are possible. Advantage/disadvantage of them are as follows.

Select the control in consideration of the advantage / disadvantage. A self-tuning function is equipped on this product so that constants for PID are automatically calculated and reflected to the control at start of control operation or change of SV

10 110 00	niter at etait er control operation er enange er ert.	
	PID control	ON/OFF control
Advantage	Better control result than ON/OFF control	Longer service life than that of PID control
Disadvantage	Short service life of the relays due to frequent on/off of output	Larger temperature fluctuation than that of PID control
